

H100BWA User Manual

1. Introduction

The product with PD, QC3.0 and wireless function, support Apple Watch wireless charging. It's our company's private model, with appearance patent, built-in high capacity battery. It uses intelligent MCU control to achieve fast charging of mobile phones by adjusting different output voltages and currents. Support wireless charging at the same time

2. Product information

Input	Lightning: 5V/2A, 9V/2A Type-C: 5V/3A, 9V/2A
Output	Wireless charge: 15W/10W/7.5W/5W Wireless For Watch: 5V/300mA USB-A: 5V/3A, 9V/2.22A, 12V/1.5A Type-C: 5V/3A, 9V/2.22A, 12V/1.5A
Material	ABS+PC
Battery	Polymer lithium battery
Capacity	10000mAh
Net weight	226g
Size	145*70.5*17.4mm
Use temperature	0-45°C
Transport & Storage temperatures	-20~50°C

3. Product Sketches

4. Methods of use

1). Wireless charging Part

After pressing the power to open the key, the wireless charging function starts, the red LED flashes, the mobile phone with wireless function is placed on the wireless charging area, the Blue LED light up, and the cell phone displays the charging identifier. The product wireless charging function can only be used when connected to external power supply

After long pressing the power to open the key, the Low- Voltage wireless charging function for Apple Watch starts, the red LED light up, the Apple Watch is placed on the wireless charging area, the red LED light up always, and the Apple Watch displays the charging identifier.

2). Wired charging

Connect one end of the USB line (USB-Micro/USB-Type C/Type C-Type C cable with the fast charge function) with the output interface of this product, the other end connected to the mobile phone or other equipment, press the power key, that is to start charging. The Green LED light up, the fast charging function start.

DC input for this product

The data line Lightning / Type-C end up the input interface, the other end is connected with the QC 3.0 or PD type adapter to charge the product, the Green LED light up, the fast charge function start.
