• Wireless chargers make charging more convenient than wired chargers,but confined by current wireless technology,their charging speed is slower than that of wired chargers

• High temperatures will reduce charging speed and restrict power, which is something that happens to all wireless chargers.It is recommended that you charge your device in environments with temperatures below 25°C/77°F

• Both the protective phone case and the position of your device on the wireless charger will affect the charging speed.The farther it is placed from the center of the wireless charger, the slower the charging speed will be.

Charge Other Devices

for other phones that support wireless charging,align your phone with the charging logo on the charger.If no charging icon shows on your device, try adjusting the position of the phone.
