

Paris, 30th June 2021,

To whom it may concern,

FeetMe Monitor (part number FTM-DK and FCC ID: 2AXOA-DKIN01) is a combination of two insoles (left and right side) and is available in 12 different sizes (from 35 to 46 in European size).

We, FeetMe, 157 boulevard Mac Donald 75019 Paris, France, manufacturer of FeetMe Monitor hereby declare that:

- Left-side and right-side insoles are equivalent from a radio perspective. The electronic board layout between left and right are mirrors to accommodate with the physical shape of the insole and the layout of the Bluetooth Low Energy section of the boards are similar. From an electrical standpoint, boards only differ by a resistance that indicates whether it is left side or right side ; there is no difference to the schematic of the radio section.
- All insole sizes are identical from a radio perspective. Besides the mechanical differences to accommodate with sizes, the only difference is the size of the capacitive plantar pressure sensors: there are 4 sizes of sensors, each covering 3 insole sizes (35-36-37 ; 38-39-40 ; 41-42-43 ; 44-45-46). All sizes share the same electronic board and antenna.
