Subject: RADIO Certification of OCP_SCM

Applicant: EZERZER Hugo
Product (PNM): OCP_G0289
Model (HVIN): OCPICSDSCM
FCC ID: 2AXRGOCPICSDSCM
IC ID: 26545-OCPICSDSCM

To Whom It May Concern:

We would like to submit the above product for Certification concerning FCC and Canadian rules.
 Please review all required documents enclosed.

This application is dedicated to ATM protection range of products: based on ink staining solutions, it permits to reduce to zero the benefits of any kind of ATM attacks.

According to the requested Class II Permissive Change with Limited Modular Approval, let us make a summary of similarities and differences between those boards/devices: due to components obsolescence, an evolution of the previous revision OCP_SCM was created but there is no impact on the radio design.

PMN	OCP_G0289
HMN	OCP_SCM
Application	ATM Safe survey
Radio comm.	With OCP_ICSD Devices *
BOM for radio feature	Same to previous revision and ICSD design **
Complete BOM	-
Radio components implantation	Similar with OCP_ICSD devices ***

- (*) : OCP_SCM device is able to communicate with OCP_ICSD devices (S1, S2, CDU10, ActiveDispense and SR for now). Indeed, radio characteristics are the same for all boards since they are composed of the same electronic components and the same firmware configuration. A proprietary bidirectional protocol is implemented to permit a full duplex channel between those devices (OCP_SCM and OCP_ICSD)
- (**) : OCP_ICSD devices (S1, S2, CDU10, ActiveDispense and SR for now) are dedicated to have the same behaviour, the same functionalities; in this way, they are composed of the same BOM, except some features which have no impact on radio communication like one LED output, a dedicated connector or a buzzer.
Note that firmware is the same for all ICSD.
- (***) : Radio balun and driver (with its quartz) components keep the same position and the same layout in order to have as much as possible the same behaviour.
The radio antenna is also similar in all boards but can be oriented in different angle due to mechanical considerations.

Compliance for RF exposure requirement was demonstrated in those test reports.

If you have any queries, please do not hesitate to contact us.

Regards,

EZERZER Hugo, November 24th 2022
