Antenna Test Report

Test Unit: Shenzhen Aihui Technology Co., Ltd.				
Materials	FPC			
Antenna form	PIFA	Polarization mode	Linear	

Application scenario	2400Mhz-2500Mhz 5100Mhz-5850Mhz		
Working band	2400Mhz-2500Mhz 5100Mhz-5850Mhz	VSWR	≤2
Power	Max: 2W	Impedance	50Ω
Gain	2400 -2500 MHz: 1.65dBi 5100 -5850 MHz: 1.41dBi		
Test Equipment	HPE5071C、Shielding Room、3D automatic turntable		

Antenna Description::

- 1. Grounding processing and picture description: no
- 2. Need to change the motherboard to match: no
 - Test voltage: 3.6V, check the antenna contact is good before testing.
 - The RF cable of the integrated tester is kept in a natural state and can not be curled.

Specification:test the specified power level, all indicators must conform to the specifications.

1.Project Image

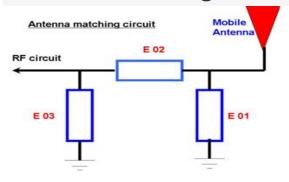

The final verification antenna performance prototype in our company for at least one year, easy to analyze and solve the problem of antenna mass production, to ensure the quality of antenna shipment

2.Test Fixture

Objective: to test the passive parameters of antenna as accurately as possible. Making Method: the handset is made of a 50 ohm coaxial cable, one end of which is connected to the test point of the back end of the matching circuit of the handset motherboard (front end of the RF test hole), and the other end is connected to the SMA joint. The diagram is as follows:

Note: The match is unmodified.

4.S11 test

4.0 4.0 s11 test method description of test equipment: Network Analyzer (E5071C) test method: a 50 ohm CABLE is used to export from the instrument test port. The SMA connector for connecting the handset is calibrated using a calibration piece, record the echo loss and standing wave ratio corresponding to the relevant frequency points. The test schematic is as follows:

4.1 SWR

5.Test Equipment

Test system: shielded darkroom

The temperature was 22 $^{\circ}$ C \pm 3 $^{\circ}$ C and the humidity was 50% \pm 15%

Test equipment: when testing passive data, use the Network analyzer AGILENTE5071C to test active data, use the omnibus CMW500

7. Antenna environment handling

The original environment, we do not do processing

8. Antenna mass production index

When the antenna is mass-produced, the standing wave ratio is taken as the mass-produced test standard.

Based on the differences of the project itself, the following criteria are given:

Frequency	Standard for volume production
2400 MHZ -2500MHZ 5100 MHZ-7200 MHZ	VSWR (Mass Production performance) & LT; VSWR(recognition performance) 0.5
