

FCC ID: 2AYOZWIIM-ONE

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance  $\leq 50$  mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] * [\sqrt{f(\text{GHz})}] \leq 3.0$

The tune-up power is -1.06 dBm +/- 0dB, therefore the highest tune-up power is -1.06 dBm (0.78 mW) @ 2480 MHz

When the minimum *test separation distance* is  $< 5$  mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

$$(\ 0.78\text{mW} / 5\text{mm} ) * ( 2.480\text{GHz}^{0.5} ) = 0.2$$

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] * [\sqrt{f(\text{GHz})}] = 0.2 < 3.0$

Therefore, standalone SAR measurements are not required for both head and body.

**Note:**

1. The tune up power referred the AVG power of the test report T201016W01-RP for SAR test exclusion purpose.
