FCC COVER LETTER

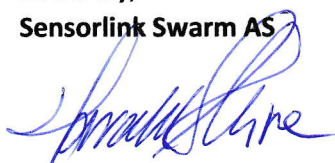

This cover letter associates the required documentation for Sensorlink Swarm AS application for market access to the North American market for our Swarm S2 products.

Swarm S2 is a Bluetooth® and ISA100 measurement transmitter connected to ultrasonic corrosion/erosion monitoring sensors. The sensors are used to monitor metal loss in pipelines and the transmitter is used to simplify data collection for the operator by transmitting the measurements wirelessly to a local automation system or a handheld terminal.

Sensorlink has been on the market with corrosion/erosion monitoring products since 2010 but only with wired/cabled data transfer capability. Now Sensorlink want to add wireless functionality to the product to adhere to the growing demand by operators to install such devices applying wireless features. The products are for the professional market where installation and use are performed by dedicated and trained personnel.

Sensorlink Swarm AS uses Nemko as our agent to assist in this process but in case there are technical or other questions, we are available at your discretion. Looking forward seeing the products approved for use in the region.

Sincerely,
Sensorlink Swarm AS
