

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped absorbers arranged in a grid pattern. A yellow test fixture is mounted on a circular turntable in the center of the chamber. A metal frame is visible in the foreground.
Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test chamber, similar to the one above. The interior walls are lined with white, square-shaped absorbers. A yellow test fixture is mounted on a circular turntable. In the foreground, several vertical metal rods are visible, likely part of a probe or antenna array.

Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the frequency range 1GHz to 18GHz. The test chamber is lined with white, square-shaped anechoic tiles. The floor is covered with blue, pyramid-shaped absorbers. A yellow wooden stand is positioned in the center, holding a white, rectangular test object. A red object is visible on the right side of the chamber.
Radiation Emission Test Setup (Above 18GHz)	 A photograph of a radiation emission test setup for frequencies above 18GHz. The test chamber is lined with white, square-shaped anechoic tiles. The floor is covered with blue, pyramid-shaped absorbers. A yellow wooden stand is positioned in the center, holding a white, rectangular test object. A blue cable is connected to the test object, and a blue probe is visible on the right side of the chamber.
