9 Variable booster gain

Note: 1. 20.21(e)(8)(i)(C)(1)

The uplink gain in dB of a consumer booster referenced to its input and output ports shall not exceed $-34 \text{ dB} - \text{RSSI} + \text{MSCL}$.

2. 20.21(e)(8)(i)(H) Transmit Power Off Mode

When the consumer booster cannot otherwise meet the noise and gain limits defined herein it must operate in "Transmit Power Off Mode." In this mode of operation, the uplink and downlink noise power shall not exceed -70 dBm/MHz and both uplink and downlink gain shall not exceed the lesser of 23 dB or MSCL.

3. According to the declaration from the manufacturer,

- a) minimum separation distance between indoor consumer wireless devices and the signal booster's antenna is 1.5m ;
- b) the highest indoor antenna gain is 10dBi ;
- c) minimum indoor cable loss is 1dB .

According to KDB 935210 D03 v04r04 appendix B, the free space path loss can be calculated $L_p = 20\log f + 20\log d - 27.5$ (here, f =frequency in MHz and d =separation distance in meters); MSCL includes the path loss from the wireless device, and the booster's server antenna gain and cable loss.

So,

The lowest MSCL for each band can be calculated as follows:

Bands	f (MHz)	d (m)	L_p (dB)	Indoor ANT Gain (dBi)	Indoor Cable Loss (dB)	MSCL (dB)
Lower 700MHz	698	1.5	32.90	10	1	23.90
Upper 700MHz	777	1.5	33.82	10	1	24.82
Cellular	824	1.5	34.34	10	1	25.34
AWS-1	1710	1.5	40.68	10	1	31.68
Broadband PCS	1850	1.5	41.36	10	1	32.36

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

Attention: To check the authenticity of testing / inspection report & certificate, please contact us at telephone: (86-755) 8307 1443, or email: CN.Doccheck@sgs.com

4. 2. According to KDB 935210 D03 v04r04 appendix D, the variable gain limit is $-34 \text{ dB} - \text{RSSI} + \text{MSCL}$ inside the RSSI-dependent region, and $6.5 \text{ dB} + 20 \text{ Log}_{10} (F)$ outside the RSSI-dependent region (23dB when operating in shutoff mode).

So,

for Lower 700MHz, the RSSI-dependent region is -73.59 dBm to -33.10 dBm
 for Upper 700MHz, the RSSI-dependent region is -73.54 dBm to -32.18 dBm
 for Cellular, the RSSI-dependent region is -73.61 dBm to -31.66 dBm
 for AWS-1, the RSSI-dependent region is -73.59 dBm to -25.32 dBm
 for Broadband PCS, the RSSI-dependent region is -73.62 dBm to -24.64 dBm

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. 		-57	-50.8	0.87	51.67		≤55.36	PASS

Remark:

1. The P_{in} (input power) was a value that was 5dB below the AGC level. Please refer to clause 2 in this report for more details for AGC level.
2. During the test, the EUT can be able to provide equivalent uplink and downlink gain, please refer to clause 3 in this report for reference.
3. The EUT lost amplification ability when operating in shutoff mode, so the uplink and downlink gain was within the transmit power off mode gain limit 23dB.

10 Occupied bandwidth

- Note:
1. EUT amplifies Lower 700MHz downlink (728-746MHz) and upper 700MHz downlink (746-756MHz) together, so combined frequency was measured for OBW in this report, the center frequency is 742MHz.
 2. Compare the spectral plot of the input signal to the output signal affirm that they are similar (in passband and roll off characteristic features and relative spectral locations).
- The test result complies with the requirement, please refer to following plots.

Remark:

1. ISO is the insertion loss between the booster donor port and server and its level is expressed in dB relative to the maximum gain.
2. The value is the difference between the peak oscillation level measured and the lowest output level measured.
- 3 It demonstrated compliance to the requirement without test data because the EUT shut down within 300s after oscillation.

12 Radiated spurious emissions

Note:

1. 20.21(e)(8)(i)(E) Out of Band Emission Limits:

Booster out of band emissions (OOBE) shall be at least 6 dB below the FCC's mobile emission limits for the supported bands of operation.

27.53(c)

For operations in the 746-758 MHz band and the 776-788 MHz band, the power of any emission outside the licensee's frequency band(s) of operation shall be attenuated below the transmitter power (P) within the licensed band(s) of operation, measured in watts, in accordance with the following:

(1) On any frequency outside the 746-758 MHz band, the power of any emission shall be attenuated outside the band below the transmitter power (P) by at least $43 + 10 \log (P)$ dB.

So,

The limit = $\{P - [43 + 10 \log (P)]\} - 6\text{dB} = -19\text{dBm}$

(2) On any frequency outside the 776-788 MHz band, the power of any emission shall be attenuated outside the band below the transmitter power (P) by at least $43 + 10 \log (P)$ dB.

So,

The limit = $\{P - [43 + 10 \log (P)]\} - 6\text{dB} = -19\text{dBm}$

(3) On all frequencies between 763-775 MHz and 793-805 MHz, by a factor not less than $76 + 10 \log (P)$ dB in a 6.25 kHz band segment, for base and fixed stations.

So,

The limit = $\{P - [76 + 10 \log (P)]\} - 6\text{dB} = -52\text{dBm}$

27.53(f)

For operations in the 746-758 MHz, 775-788 MHz, and 805-806 MHz bands, emissions in the band 1559-1610 MHz shall be limited to -70 dBW/MHz equivalent isotropically radiated power (EIRP) for wideband signals, and -80 dBW EIRP for discrete emissions of less than 700 Hz bandwidth.

27.53(g)

For operations in the 600 MHz band and the 698-746 MHz band, the power of any emission outside a licensee's frequency band(s) of operation shall be attenuated below the transmitter power (P) within the licensed band(s) of operation, measured in watts, by at least $43 + 10 \log (P)$ dB.

So,

The limit = $\{P - [43 + 10 \log (P)]\} - 6\text{dB} = -19\text{dBm}$

27.53(h)

the power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) in watts by at least $43 + 10 \log_{10} (P)$ dB.

So,

The limit = $\{P - [43 + 10 \log (P)]\} - 6\text{dB} = -19\text{dBm}$

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. 22.917

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB.

So,

The limit = $\{P - [43 + 10 \log(P)]\} - 6\text{dB} = -19\text{dBm}$

2. The Radiated test performed at bottom, middle, top channel, the data with more than 20dB margin, therefore, only the worst-case middle channel test data was recorded in this report.

3. The Radiated test performed at uplink and downlink mode, the data with more than 20 dB margin, therefore, only the worst-case uplink mode test data was recorded in this report.

4. The disturbance 9kHz to 30MHz was very low and 20dB below the limit, therefore, the data was not recorded in this report.
