

Unleash ZERO

How to use the most secure wallet in the world

Unleash ZERO

0. Verify your device

First, we will verify if your device is safe to use. Go to ngrave.io/verify, scan the QR code with your ZERO and enter the 6 digits to authenticate your device.

1. Create or import a new wallet

Create a new wallet or select the import option if you want to recover an existing one.

2. Create a new NGRAVE wallet

Create a new wallet protected by the NGRAVE Perfect Key, the strongest key in the industry (recommended).

Or create a new 24-word mnemonic seed phrase based wallet. Note that this type of wallet is not compatible with the GRAPHENE backup solution.

3. Choose a strong PIN code

Create a PIN code to secure your wallet. Try to avoid a PIN that is easy to guess, such as your birthday.

4. Register your fingerprint

Register your fingerprint to create a unique wallet. Your fingerprint will also be used as a second authorization factor on top of your PIN, to unlock your device and to sign transactions.

5. Create your unique key

Your ZERO will start generating new keys in real-time. You can freeze and unfreeze this process as often as you want. This is a first step to ensure that you and only you know the value of your key.

6. Make the key really yours

Select one or several groups of 8 characters and shuffle their values. This is the second step to ensure that only you know the value of your key.

7. Back up your recovery key

If you lose or damage your ZERO, you can easily restore your accounts by entering your recovery key in a new device. That means making a strong backup is crucial.

If you own a GRAPHENE, you can follow the steps as displayed on your ZERO to correctly punch in your backup.

If you don't own a GRAPHENE, you can use the strengthened paper wallet included in the box. In either case, be very attentive to where you store your backup. It is your last resort to recover your wallet.

8. Set up your dashboard

Select the coins you want to see in your wallet. You can also use the search bar.

9. Download the mobile app

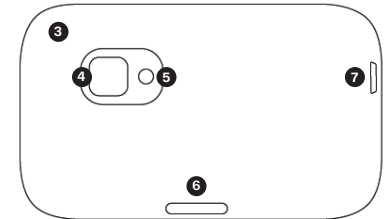

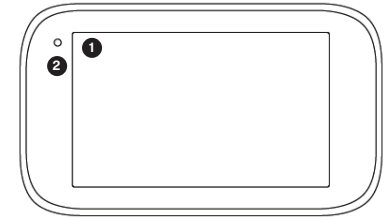

Download the LIQUID app by scanning the QR code below or go to ngrave.io/products/liquid.

10. Sync your accounts to your app

Select the sync option on your ZERO. Then scan the generated QR code with your smartphone to import and access a real-time overview of all your accounts. Now you can also receive and initiate transactions right from the app. Your private keys remain safely offline on your ZERO.

Scan this QR code to visit our online how-to guide or go to ngrave.io/getting-started

Width: 124,5 mm
Height: 72,7 mm
Thickness: 14,5 mm
