

Note.

1. No spurious emission were detected above 3 GHz.
2. Average test would be performed if the peak result were greater than the average limit.

Report No. : KES-RF240944-R1

Mode: 802.11n_HT20 (MCS0)

**Test results (18 GHz to 40 GHz)**

Band UNII-1
Mode 802.11a (6 Mbps)
Distance of measurement: 3 meter
Channel 36 (Worst Case)

Note.

1. No spurious emission were detected above 18 GHz.

Band UNII-3
Mode 802.11n_HT20 (MCS0)
Distance of measurement: 3 meter
Channel 149 (Worst Case)

Note.

1. No spurious emission were detected above 18 GHz.

3.7. AC conducted emissions

Limit

According to 15.207(a), for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50uH/50 ohm line impedance stabilization network (LISN). Compliance with the provision of this paragraph shall on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower applies at the boundary between the frequencies ranges.

Frequency of Emission (MHz)	Conducted limit (dBμV)	
	Quasi-peak	Average
0.15 – 0.50	66 - 56*	56 - 46*
0.50 – 5.00	56	46
5.00 – 30.0	60	50

3.8. Antenna Requirement

According to 15.203, An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. This requirement does not apply to carrier current devices or to devices operated under the provisions of Sections 15.211, 15.213, 15.217, 15.219, or 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with Section 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded.

Result

Details	Verdict
The transmitter has a FPCB Antenna that is built into the product, so it can't be replaced by the user. The maximum antenna gain does not exceed 6 dBi 3.94 dBi for 2.4 GHz band 3.61 dBi for UNII-1 band. 3.77 dBi for UNII-1 band	Pass
