锁芯方钢

室内

Door

Take out the handle connecting pipe and connect the front panel wire to the front panel through the facade and lock body (the correct position of the wire is: the lock hole at the top of the door fan) and insert the square bar into the security door lock body, usually with a short end facing inward.

Insert the front panel wire in the rear panel;

2.   The rear panel insurance is aligned with the safety hole;

3.   The handle knob is aligned inward and the rotary knob is aligned with the square steel of the lock core.

Do not tighten the screw too tight, move the rear panel, press the knob inward to turn the knob more freely before tightening the connecting screw.

Install lithium battery, cover battery cover and install.

Debug: Press the lock key motor to rotate freely, after the lock is finished, press the rear panel knob, turn freely without Carton condition is normal. If you rotate Catton, release the lock screw 1 circle up and down to move the lock until the knob rotates freely to turn the safety knob to pop up.)

Serial number	Project	Description
1	Working voltage	7V-8.4V
2	Alarm voltage	Below 7.2 V: battery power
3	dormant static current	<80ɭA
4	Formula	Fingerprint, aim, card
5	NFC	
6	Mouth	Micro USB interface (Charger charging battery)
7	Number of users managed	5
8	Number of ordinary users	295
9	Reference	100
10		100
11	Number of cards	100
12	Card Type and Type	Mifare-l and ISO /IEC 11143-A compatibility
13	Lock (front panel)	Lakes (CLOSE)
14	ˆ± lock (rear panel)	(CLOSE)
15	(rear panel)	Lakes (OPEN)

Restoring Ex-factory Settings (Initialization System)- Operation on Power Up

1、Remove all batteries from the intelligent lock and disconnect the power supply during testing.

2、Multiple clicks on the rear panel switch lock key to allow the system to discharge completely.

3、Press the rear panel lock key not to loosen, put in the intelligent lock battery.

4、Wait for the system to prompt 5 keystroke sounds (release fingers within

5 times to cancel initialization).

5、 After pressing the key 5 times prompt "initialization, please wait" can loosen the finger, the system into initialization mode.

6、 When the system voice prompt "initialization success ", the system initialization is completed, all user electronic keys empty, enter open demonstration mode.

Note: after initialization, the system administrator password is restored to "123456". After initialization, any fingerprint or card can be unlocked for customers to experience the lock function operation will not affect the direction of the motor, strength and rotation time settings, will save the previous settings parameters.

```

Press "1" to add administrator information, press "2" to add ordinary users, enter the number (such as 001#) to enter fingerprints, cards or passwords (fingerprint entry 5 times, password entry 6-12 digits 2 times, IC card only Need to enter 1 time)

After the operation is successful, press "*" to return to the previous level or continue to add administrators

**Press "3" to delete the information by number, enter the number, press # to confirm (such as 002#)Press "4" to delete by group, divided into 2 groups: administrator and ordinary user
Note: Group deletion cannot delete management user information, and management users can only be deleted by number.**

After the operation is successful, press "*" to return to the previous level or continue to add administrators

System parameter setting

Restore factory settings (initialization system)

1. enter the system menu, the system prompts:

　　User management press 1,

　　Press 2 for system setup,

　　Unlock parameters press 3,

　　Restore factory setting by 4;

2、 Press "4" to select to restore factory settings, because the

initialization hazard level is high, so in order to prevent misoperation,

set up a reconfirmation menu, must be confirmed by the user, this time the button confirmed;

3, Enter the initialization interface, initialization process and power-on initialization operation, after initialization will restart the system.

Unlock

1、 In dormant or wake-up state, the card entered into the card area to unlock;

2、 In dormant or wake-up state, put the finger into the fingerprint box to verify the unlock;

3、 Wake-up state will have entered the password input after the key to verify the unlock;

4、 Click the back panel to unlock the key (OPEN) to unlock;

5、 Dynamic password (WeChat Mini Program) unlock, please read the company's "dynamic password operation instructions ".

Lock lock

1、 Click the lock key on the front panel in dormant or wake-up state.

2、 Click the back panel to close the lock.

3、 After the automatic delay lock is turned on, the countdown time of dormant state after unlocking will automatically turn off the lock.

Electronic backlock

Press the rear panel lock button 2 S, wait for the front panel to prompt "the door has entered the anti-lock mode" or "the door has withdrawn from the anti-lock mode ", enter the anti-lock can only be unlocked by the administrator, ordinary users can not unlock.

Note: please use this function carefully.

doorbell

In dormant or wake-up state, click the front panel doorbell key (if there is no doorbell key, use the key reuse), this time will ring two doorbells,

can not interrupt, many doorbells need to wait for the system to sleep and click the doorbell key again.

Electricity alarm

1、 If the battery voltage is lower than the alarm voltage (default 7.2 V), it will prompt "low battery power ".

2, After the switch lock, if the battery voltage is lower than the alarm voltage (default 7.2 V), it will prompt "low battery power ". Warm Tip: need to replace the battery or charge the battery at this time, lest the battery depletion affect the switch lock.

Battery charging and system emergency

1、 If the battery has been completely depleted and shut down, it is necessary to charge the battery with external USB power supply. When the voltage rises to the point where the lock can be unlocked, the input information is verified to unlock.

2、 After the battery is low, it needs to charge the battery, which can be charged with external USB or removed from the lithium battery.

Warm Tip: do not press the lock key when re-discharging pool, otherwise it will enter initialization, resulting in system information emptying -

Continuous validation error freeze

When the lock body validates more than 5 times in 5 minutes, all operations are frozen

Touch the keyboard and fingerprint head to prompt the system to freeze

System exception handling

No electronic product can guarantee 100% stability, so don't try to get stuck or run

Panic, lock body with emergency reset interface, users can find the reset key and press restart system.

Get WeChat Whip (dynamic password)

1. QR code concern, WeChat "sweep" scan below the QR code can be used, for ease of use, it is recommended that this WeChat Mini Program into the "my Mini Program" O

2. search attention, WeChat search "lock secret ", as shown below, choose to enter can be used.

Dynamic Cryptography Knowledge Dialysis

Dynamic passwords are also called temporary or offline passwords to solve the following problems:

1. When the host is not at home, the visitor visits or hears his special scene needs to open the door and the host does not want to disclose his original password to the visitor;

2、 The door lock has no networking function or other remote function that can operate the lock.

The Principle of Dynamic Cryptography

The WeChat Mini Program software on the mobile phone generates a discrete digital array of administrative passwords and current time information through complex encryption algorithms. We combine the numbers to generate a fixed 10-bit password. After the visitor enters this password, the intelligent lock restores the original administrator password and time information through decryption algorithm.

According to the above principle, if you want to use dynamic password normally, you must meet two conditions: manage password and time, so you need to enter the correct management password of intelligent lock. And need to synchronize the time of intelligent lock and network time or within error range, please refer to the operation instructions of intelligent lock.

Note: in order to distinguish the "temporary password" in the Internet of things module, we use "dynamic password ", such as" temporary password "also refers to" dynamic password ".

Enter administrative password

The management password follows the following rules.

1、 When the user does not set the management password, this function is not available and requires the user to enter at least one set of

management passwords before activating this function.

2、When the user sets the management password, the group of management passwords with the smallest user number must be entered. For example, the password corresponding to number 2 is "123123", and the password corresponding to number 5 is "123456". Enter the password generated by 123456.

3、When the user has set up the management password, if there is a management password or delete the management password, you need to re-enter the new password according to the rules of 1 and 2 above, otherwise the previously generated password will not be used, single password A single password is a password that can only be used once in 10 minutes from the beginning of the generation of this password, beyond this period or has been used, this password will expire.

The process is as follows:

20: 30

1. attention to WeChat Public

Open WeChat "sweep" or search for "you Zhiyun home ", pay attention to WeChat public number

2. Access Application Registration

Enter "Youzhi cloud home WeChat public number, click on the lower right corner of" WeChat control ", enter the account login interface, then, click on the lower right

Corner' account registration into the account registration interface, support mobile phone and mailbox registration account, choose any way can.

3. setting remote unlock security password

The first login requires a "security password ", which is used for unlock verification. As shown below;

After login, the upper left corner menu bar one set my security password one input security password (remote unlock password) one input account login password one set successfully.

4. Add Equipment

Return to "device list ", click "+" in the upper right corner to add the device, as shown below; add the device for the first time, need to create the home, enter the name of the home, click again on the upper right corner "+".

4.1: Connected device hotspots

Enter this interface, wait, do not click "next ", please WeChat back to the background;

Operation lock into the WIFI hot network state, wake up lock a light press "2#" to verify the administrator information.
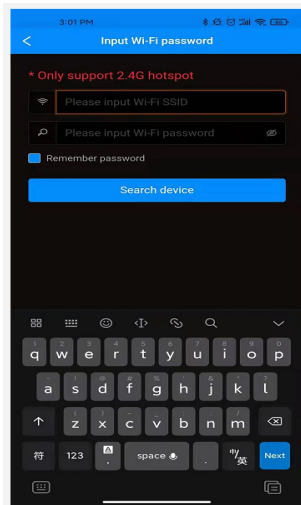

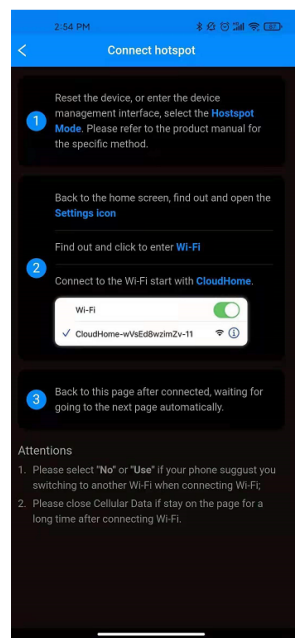

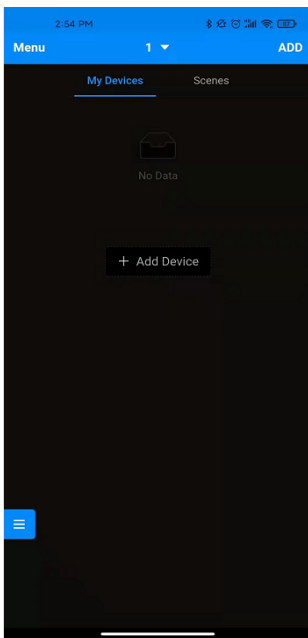

Turn on the phone to set up a WIFI to connect to the CloudHome-XXXX-16 WIFI, after the successful connection to WeChat public number, click on "next ";

Note: some mobile phone Wi-Fi list refresh is slow, please refresh or click on the Wi-Fi switch key to force refresh; the hot Wi-Fi sent out by the device can not access the Internet, some mobile phones may be prompted to switch the network, Select ignore, do not switch, continue to use, etc. If the connection is successful, there will be a language broadcast, but the phone prompt is successful, and the lock does not reflect, the network is actually connected, direct 4.2: select the WIFI to connect

4.3: Enter the correct WIFI password

4.4: Networking

4.5: Registration of new equipment

How 5. Turn on WeChat Reminders

5.1 Access to the Open Reminder page

Click Open Alert to enter the If Settyin gou are spage not logged in,
please log in first.

5.2 Reminders

Click on "open reminder ", as shown below is the success of the opening.

Equipment WeChat Notification

When intelligent lock unlock or remote unlock events, WeChat real-time reminder.

6. how to open locks remotely

Remote Unlock Operation

Remote unlock needs to operate on the door lock to issue a request, in the lock press "4#", the host receives the unlock request, enter the security password to unlock.

How do 7. share devices

7.1 Access to Family Management

Click the upper left menu button to open the application sidebar and select Home Management to click on the family to share.
