

# TEST REPORT

## **FCC PART 15.247**

Report Reference No...... CTL2104191011-WF02

Compiled by: ( position+printed name+signature)

Happy Guo (File administrators)

Tested by: ( position+printed name+signature)

Cary Gao (Test Engineer)

Approved by: ( position+printed name+signature)

Ivan Xie (Manager)

Product Name : Thermal Printer

Model/Type reference..... E10

List Model(s)..... E11, E12, E13, E15

Trade Mark..... N/A

FCC ID...... 2AZW2-E10

Applicant's name...... Beijing Supvan Information Technology Co., Ltd.

Address of applicant Room 206, 2F, Building No. 1 No. 1 Gaoxin Three Street, Huilongguan Town Character Street

Test Firm...... Shenzhen CTL Testing Technology Co., Ltd.

Floor 1-A, Baisha Technology Park, No.3011, Shahexi Road, Address of Test Firm.....

Nanshan District, Shenzhen, China 518055

Test specification....:

Standard...... FCC Part 15.247: Operation within the bands 902-928 MHz,

2400-2483.5 MHz and 5725-5850 MHz.

TRF Originator...... Shenzhen CTL Testing Technology Co., Ltd.

Master TRF.....: Dated 2011-01

Date of receipt of test item...... Apr. 20, 2021

Date of sampling...... Apr. 20, 2021

Date of Test Date...... Apr. 20, 2021-May. 07, 2021

**Date of Issue**...... May. 08, 2021

## 1. SUMMARY

### 1.1. TEST STANDARDS

The tests were performed according to following standards:

FCC Rules Part 15.247: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz

ANSI C63.10: 2013: American National Standard for Testing Unlicensed Wireless Devices

KDB 558074 D01 15.247 Meas Guidance v05r02 : Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247

## 1.2. Test Description

| TOTAL CONTRACTOR OF THE PROPERTY OF THE PROPER |  |
|--|--|
|  |  |
| AC Power Conducted Emission  | PASS   |
| 6dB Bandwidth  | PASS   |
| Spurious RF Conducted Emission   | PASS   |
| Maximum Conducted Output Power   | PASS   |
| Power Spectral Density   | PASS   |
| Radiated Emissions   | PASS   |
| Band Edge  | PASS   |
| Antenna Requirement  | PASS   |
|  | 6dB Bandwidth  Spurious RF Conducted Emission  Maximum Conducted Output Power  Power Spectral Density  Radiated Emissions  Band Edge |

V1.0 Page 6 of 28 Report No.: CTL2104191011-WF02

## 1.3. Test Facility

#### 1.3.1 Address of the test laboratory

Shenzhen CTL Testing Technology Co., Ltd.

Floor 1-A, Baisha Technology Park, No. 3011, Shahexi Road, Nanshan, Shenzhen 518055 China There is one 3m semi-anechoic chamber and two line conducted labs for final test. The Test Sites meet the requirements in documents ANSI C63.4 and CISPR 32/EN 55032 requirements.

#### 1.3.2 Laboratory accreditation

The test facility is recognized, certified, or accredited by the following organizations:

CNAS-Lab Code: L7497

Shenzhen CTL Testing Technology Co., Ltd. has been assessed and proved to be in compliance with CNAS-CL01 Accreditation Criteria for Testing and Calibration Laboratories (identical to ISO/IEC 17025: 2005 General Requirements) for the Competence of Testing and Calibration Laboratories.

#### A2LA-Lab Cert. No. 4343.01

Shenzhen CTL Testing Technology Co., Ltd, EMC Laboratory has been accredited by A2LA for technical competence in the field of electrical testing, and proved to be in compliance with ISO/IEC 17025: 2005 General Requirements for the Competence of Testing and Calibration Laboratories and any additional program requirements in the identified field of testing.

IC Registration No.: 9618B

**CAB identifier: CN0041** 

The 3m alternate test site of Shenzhen CTL Testing Technology Co., Ltd. EMC Laboratory has been registered by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements with Registration No.: 9618B on Jan. 22, 2019.

FCC-Registration No.: 399832

**Designation No.: CN1216** 

Shenzhen CTL Testing Technology Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 399832, December 08, 2017.

## 1.4. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods — Part 4: Uncertainty in EMC Measurements" and is documented in the Shenzhen CTL Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for CTL laboratory is reported:

| Test                                    | Measurement<br>Uncertainty | Notes |
|---|----------------------------|-------|
| Transmitter power conducted             | ±0.57 dB                   | (1)   |
| Transmitter power Radiated              | ±2.20 dB                   | (1)   |
| Conducted spurious emission 9KHz-40 GHz | ±2.20 dB                   | (1)   |
| Occupied Bandwidth                      | ±0.01ppm                   | (1)   |
| Radiated Emission 30~1000MHz            | ±4.10dB                    | (1)   |
| Radiated Emission Above 1GHz            | ±4.32dB                    | (1)   |
| Conducted Disturbance0.15~30MHz         | ±3.20dB                    | (1)   |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

V1.0 Page 7 of 28 Report No.: CTL2104191011-WF02

## 2. GENERAL INFORMATION

## 2.1. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

| Normal Temperature: | 25°C    |
|---------------------|---------|
| Relative Humidity:  | 55 %    |
| Air Pressure:       | 101 kPa |

## 2.2. General Description of EUT

| Product Name:         | Thermal Printer             |
|-----------------------|-----------------------------|
| Model/Type reference: | E10, E11, E12, E13, E15     |
| Power supply:         | DC 5V from USB              |
| Hardware Version:     | F                           |
| Software Version:     | IOS: 2.6<br>Andriod: 1.6.10 |
| Bluetooth:            |                             |
| Version:              | Supported BR/EDR            |
| Modulation:           | GFSK, $\pi$ /4DQPSK, 8DPSK  |
| Operation frequency:  | 2402MHz~2480MHz             |
| Channel number:       | 79                          |
| Channel separation:   | 1MHz                        |
| Antenna type:         | PCB Antenna                 |
| Antenna gain:         | 0dBi                        |
| Bluetooth LE          |                             |
| Supported type:       | Bluetooth Low Energy        |
| Modulation:           | GFSK                        |
| Operation frequency:  | 2402MHz to 2480MHz          |
| Channel number:       | 40                          |
| Channel separation:   | 2 MHz                       |
| Antenna type:         | PCB Antenna                 |
| Antenna gain:         | 0dBi                        |
| RFID                  |                             |
| Operation frequency:  | 13.56MHz                    |
| Modulation :          | ASK                         |
| No. of Channel :      | 1                           |
| Antenna type:         | Loop Antenna                |
|                       |                             |

Note1: For more details, please refer to the user's manual of the EUT.

Note2: Antenna gain provided by the applicant.

Note3: This report is for Bluetooth Low Energy only.

## 2.3. Description of Test Modes and Test Frequency

The Applicant provides communication tools software to control the EUT for staying in continuous transmitting (Duty Cycle more than 98%) and receiving mode for testing.

There are 40 channels provided to the EUT and Channel 00/19/39 were selected for BLE test.

## **Operation Frequency List:**

| <u> </u> |                 |
|----------|-----------------|
| Channel  | Frequency (MHz) |
| 00       | 2402            |
| 02       | 2404            |
| 03       | 2406            |
|          |                 |
| 19       | 2440            |
|          |                 |
| 37       | 2476            |
| 38       | 2478            |
| 39       | 2480            |

Note: The line display in grey were the channel selected for testing

## 2.4. Equipments Used during the Test

| Test Equipment                        | Manufacturer            | Model No. | Model No. Serial No. |            | Calibration<br>Due Date |  |

## 2.5. Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended to comply with Section 15.247 of the FCC Part 15, Subpart C Rules.

### 2.6. Modifications

No modifications were implemented to meet testing criteria.

V1.0 Page 10 of 28 Report No.: CTL2104191011-WF02

### 3. TEST CONDITIONS AND RESULTS

#### 3.1. Conducted Emissions Test

#### LIMIT

FCC CFR Title 47 Part 15 Subpart C Section 15.207

|-----------------------|------------|-----------|
| Frequency range (MHz) | Quasi-peak | Average   |
| 0.15-0.5              | 66 to 56*  | 56 to 46* |
| 0.5-5                 | 56         | 46        |
| 5-30                  | 60         | 50        |

<sup>\*</sup> Decreases with the logarithm of the frequency.

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1. The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system; a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10:2013.
- 2. Support equipment, if needed, was placed as per ANSI C63.10:2013.
- 3. All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10:2013.
- 4. The adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5. All support equipments received AC power from a second LISN, if any.
- 6. The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7. Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8. During the above scans, the emissions were maximized by cable manipulation.

## 3.2. Radiated Emissions and Band Edge

#### Limit

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission out of authorized band shall not exceed the following table at a 3 meters measurement distance.

In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a)

Radiated emission limits

| Frequency (MHz) | Distance (Meters) | Radiated (dBµV/m)                | Radiated (µV/m) |
|-----------------|-------------------|----------------------------------|-----------------|
| 0.009-0.49      | 3                 | 20log(2400/F(KHz))+40log(300/3)  | 2400/F(KHz)     |
| 0.49-1.705      | 3                 | 20log(24000/F(KHz))+ 40log(30/3) | 24000/F(KHz)    |
| 1.705-30        | 3                 | 20log(30)+ 40log(30/3)           | 30              |
| 30-88           | 3                 | 40.0                             | 100             |
| 88-216          | 3                 | 43.5                             | 150             |
| 216-960         | 3                 | 46.0                             | 200             |
| Above 960       | 3                 | 54.0                             | 500             |

#### **TEST CONFIGURATION**

(A) Radiated Emission Test Set-Up, Frequency Below 30MHz

(B) Radiated Emission Test Set-Up, Frequency below 1000MHz

(C) Radiated Emission Test Set-Up, Frequency above 1000MHz

Report No.: CTL2104191011-WF02

#### **Test Procedure**

- 1. Below 1GHz measurement the EUT is placed on a turntable which is 0.8m above ground plane, and above 1GHz measurement EUT was placed on a low permittivity and low loss tangent turn table which is 1.5m above ground plane.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measurements have been completed.

#### **TEST RESULTS**

#### Remark:

- 1. For below 1GHz testing recorded worst at BLE low channel.
- 2. Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.

#### **REMARKS**:

- 1. Emission level (dBuV/m) =Raw Value (dBuV)+Correction Factor (dB/m)
- 2. Correction Factor (dB/m) = Antenna Factor (dB/m)+Cable Factor (dB)-Pre-amplifier Factor
- 3. Margin value = Limit value- Emission level.
- 4. -- Mean the PK detector measured value is below average limit.
- 5. The other emission levels were very low against the limit.
- 6. RBW1MHz VBW3MHz Peak detector is for PK value; RBW 1MHz VBW10Hz Peak detector is for AV value.

#### **REMARKS**:

- Emission level (dBuV/m) = Raw Value (dBuV)+Correction Factor (dB/m)
   Correction Factor (dB/m) = Antenna Factor (dB/m)+Cable Factor (dB)-Pre-amplifier Factor

- 3. Margin value = Limit value- Emission level.
- 4. -- Mean the PK detector measured value is below average limit.
- 5. The other emission levels were very low against the limit.
- 6. RBW1MHz VBW3MHz Peak detector is for PK value; RBW 1MHz VBW10Hz Peak detector is for AV value.
- 7. For fundamental frequency, RBW 3MHz VBW 3MHz Peak detector is for PK Value; RMS detector is for AV value.

## 3.3. Maximum Conducted Output Power

#### **Limit**

The Maximum Peak Output Power Measurement is 30dBm.

#### **Test Procedure**

Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the power sensor.

### **Test Configuration**

## **Test Results**

Raw data reference to Section 2 from Appendix.

V1.0 Page 22 of 28 Report No.: CTL2104191011-WF02

## 3.4. Power Spectral Density

#### Limit

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### **Test Procedure**

- 1. Use this procedure when the maximum peak conducted output power in the fundamental emission is used to demonstrate compliance.
- 2. Set the RBW ≥ 3 kHz.
- 3. Set the VBW  $\geq$  3× RBW.
- 4. Set the span to 1.5 times the DTS channel bandwidth.
- 5. Detector = peak.
- 6. Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Allow trace to fully stabilize.
- 9. Use the peak marker function to determine the maximum power level.
- 10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.
- 11. The resulting peak PSD level must be 8dBm.

#### **Test Configuration**

#### **Test Results**

Raw data reference to Section 3 from Appendix.

V1.0 Page 23 of 28 Report No.: CTL2104191011-WF02

### 3.5. 6dB Bandwidth

#### Limit

For digital modulation systems, the minimum 6 dB bandwidth shall be at least 500 kHz

#### **Test Procedure**

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100 KHz RBW and 300 KHz VBW. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

### **Test Configuration**

#### **Test Results**

Raw data reference to Section 1 from Appendix.

V1.0 Page 24 of 28 Report No.: CTL2104191011-WF02

#### 3.6. Out-of-band Emissions

#### Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF con-ducted or a radiated measurement, pro-vided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter com-plies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required.

#### **Test Procedure**

Connect the transmitter output to spectrum analyzer using a low loss RF cable, and set the spectrum analyzer to RBW=100 kHz, VBW= 300 kHz, peak detector, and max hold. Measurements utilizing these setting are made of the in-band reference level, bandedge and out-of-band emissions.

#### **Test Configuration**

#### **Test Results**

Raw data reference to Section 4 from Appendix.

## 3.7. Antenna Requirement

#### **Standard Applicable**

#### For intentional device, according to FCC 47 CFR Section 15.203:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited

## FCC CFR Title 47 Part 15 Subpart C Section 15.247(c) (1) (I):

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

#### **Test Result:**

The maximum gain of antenna was 0dBi.
