

Automation Inc. dba RADAR

TEST REPORT FOR

**RFID sensor operating in the UHF band
Model: RS510**

Tested to The Following Standards:

FCC Part 15 Subpart C Section(s)

**15.207 & 15.247
(FHSS 902-928MHz)**

Report No.: 108261-6

Date of issue: June 2, 2023

Test Certificate # 803.01

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of testing for CKC Laboratories, Inc.

We strive to create long-term, trust-based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 103 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

Test Report Information

REPORT PREPARED FOR:

Automation Inc. dba RADAR
15150 Avenue of Science, Ste. 200
San Diego, CA 92121

Representative: Mark Easton
Customer Reference Number: 1662-SD1-Test

REPORT PREPARED BY:

Viviana Prado
CKC Laboratories, Inc.
5046 Sierra Pines Drive
Mariposa, CA 95338

Project Number: 108261

DATE OF EQUIPMENT RECEIPT:

April 28, 2023

DATE(S) OF TESTING:

April 28, 2023 and May 1 and 2, 2023

Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the equipment provided by the client, tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

A handwritten signature in black ink that reads "Steve Behm".

Steve Behm
Director of Quality Assurance & Engineering Services
CKC Laboratories, Inc.

Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable, and affordable test results.

TEST LOCATION(S):
CKC Laboratories, Inc.
110 Olinda Place
Brea, CA 92823

SUMMARY OF RESULTS

Standard / Specification: FCC Part 15 Subpart C - 15.247 (FHSS 902-928MHz)

Test Procedure	Description	Modifications	Results
15.247(a)(1)(i)	Occupied Bandwidth	NA	Pass
15.247(a)(1)	Carrier Separation	NA	Pass
15.247(a)(1)(i)	Number of Hopping Channels	NA	Pass
15.247(a)(1)(i)	Average Time of Occupancy	NA	Pass
15.247(b)(2)	Output Power	NA	Pass
15.247(d)	RF Conducted Emissions & Band Edge	NA	Pass
15.247(d)	Radiated Emissions & Band Edge	NA	Pass
15.207	AC Conducted Emissions	NA	Pass

NA = Not Applicable

ISO/IEC 17025 Decision Rule
The equipment sample utilized for testing is selected by the manufacturer. The declaration of pass or fail herein is a binary statement for simple acceptance rule (ILAC G8) based upon assessment to the specification(s) listed above, without consideration of measurement uncertainties. For performance related tests, equipment was monitored for specified criteria identified in that section of testing.

Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

Summary of Conditions
No modifications were made during testing.

Modifications listed above must be incorporated into all production units.

Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

Summary of Conditions
None

EQUIPMENT UNDER TEST (EUT)

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

Configuration 4

Equipment Tested:

Device	Manufacturer	Model #	S/N
RFID sensor operating in the UHF band	Automaton Inc dba RADAR	RS510	513

Support Equipment:

Device	Manufacturer	Model #	S/N
Gigabit POE	Trendent	TPE-117G1A	E18H7G2000147
Keyboard	Perixx	Perboard 505 Plus	1906000719
Mouse	DPI	TM176G	20220523000709
Minicomputer	Intel	NUC8HN	BTHN009003HV

Configuration 5

Equipment Tested:

Device	Manufacturer	Model #	S/N
RFID sensor operating in the UHF band	Automaton Inc dba RADAR	RS510	508

Support Equipment:

Device	Manufacturer	Model #	S/N
Gigabit POE	Trendent	TPE-117G1A	E18H7G2000147
Keyboard	Perixx	Perboard 505 Plus	1906000719
Mouse	DPI	TM176G	20220523000709
Minicomputer	Intel	NUC8HN	BTHN009003HV

Configuration 6

Equipment Tested:

Device	Manufacturer	Model #	S/N
RFID sensor operating in the UHF band	Automaton Inc dba RADAR	RS510	507

Support Equipment:

Device	Manufacturer	Model #	S/N
Gigabit POE	Trendent	TPE-117G1A	E18H7G2000147
Keyboard	Perixx	Perboard 505 Plus	1906000719

Minicomputer	Intel	NUC8HN	BTHN009003HV
POE injector	Solis Energy	HPI-2148	PT2144220316

General Product Information:

Product Information	Manufacturer-Provided Details
Equipment Type:	Stand-Alone Equipment
Type of Wideband System:	FHSS
Operating Frequency Range:	902.75-927.25MHz
Number of Hopping Channels:	50
Receiver Bandwidth and Synchronization:	The manufacturer declares the receiver input bandwidth matches the transmit channel bandwidth and shifts frequencies in synchronization with the transmitter.
Modulation Type(s):	PR-ASK *
Maximum Duty Cycle:	98% or better
Number of TX Chains:	4
Antenna Type(s) and Gain:	Patch Array 6.12 dBi to 9.28 dBi (Measured ant gain + beamforming gain as provided by the manufacturer)
Beamforming Type:	Digital
Antenna Connection Type:	Integral (External connector provided to facilitate testing)
Nominal Input Voltage:	48VDC from POE
Firmware / Software used for Test:	Test mode firmware version: 0.85.11
The validity of results is dependent on the stated product details, the accuracy of which the manufacturer assumes full responsibility.	

*Phase reversal ASK., TARI set at 6.25us

FCC Part 15 Subpart C

15.247(a) Transmitter Characteristics

Test Setup/Conditions			
Test Location:	Brea Lab A	Test Engineer:	E. Wong
Test Method:	ANSI C63.10 (2013)	Test Date(s):	5/2/2023
Configuration:	5		
Test Setup:	The equipment under test (EUT) is set on a test bench. The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT. Frequency Range of EUT: 902.75MHz to 927.25MHz TX 902.75MHz, 914.75MHz, 927.25MHz TARI = 6.25us as intended. Worse case antenna pattern and associated power level evaluated. Lowest Gain: Sector 135, 0 Power setting 29.1dBm		

Environmental Conditions			
Temperature (°C)	22.1	Relative Humidity (%):	46

Test Equipment

15.247(a)(1)(i) Occupied Bandwidth

Test Data Summary					
Frequency (MHz)	Antenna Port	Modulation	Measured (kHz)	Limit (kHz)	Results
902.75	1	PR-ASK	182.7	≤500	Pass
914.75	1	PR-ASK	182.7	≤500	Pass
927.25	1	PR-ASK	183.8	≤500	Pass

Plot(s)

Low Channel

Middle Channel

High Channel

15.247(a)(1) Carrier Separation

Test Data Summary				
Limit applied: 20dB bandwidth of the hopping channel.				
Antenna Port	Operational Mode	Measured (kHz)	Limit (kHz)	Results
1	Hopping	483	> 183.8	Pass

Plot(s)

15.247(a)(1)(i) Number of Hopping Channels

Test Data Summary				
$\text{Limit} = \begin{cases} 50 \text{ Channels} & 20 \text{ dB BW} < 250 \text{ kHz} \\ 25 \text{ Channels} & 20 \text{ dB BW} \geq 250 \text{ kHz} \end{cases}$				
Antenna Port	Operational Mode	Measured (Channels)	Limit (Channels)	Results
1	Hopping	50	≥ 50	Pass

Plot(s)

15.247(a)(1)(i) Time of Occupancy

Test Data Summary				
Observation Period, P_{obs} is derived from the following: $P_{obs} = \begin{cases} 20 \text{ Seconds} & 20 \text{ dB BW} < 250\text{kHz} \\ 10 \text{ Seconds} & 20 \text{ dB BW} \geq 250\text{kHz} \end{cases}$				
Antenna Port	Operational Mode	Measured (ms)	Limit (ms/ P_{obs})	Results
1	hopping	391.2	≤ 400	Pass

Measured results are calculated as follows:

$$Dwell \text{ time} = \left(\sum_{Bursts} RF \text{ Burst On Time} + \sum_{Control} Control \text{ Signal On time} \right) \Big|_{P_{obs}}$$

Actual Calculated Values:

Parameter	Value
Observation Period (P_{obs}):	100sec
Number of RF Bursts / P_{obs} :	4.9
On time of RF Burst:	399.2ms
Number of Control or other signals / P_{obs} :	Na
On time of Control or other Signals:	Na
Total Measured on Time:	391.2ms

Average of ten 100 second sweep

$(4.9 \text{ event} / 100) \times 20 \text{ sec} = 0.98 \text{ event} / 20 \text{ sec}$

On time per 20 sec = $0.98 \text{ event} / 20 \text{ sec} \times 399.2\text{ms} = 391.2\text{ms}$

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA • (714) 993-6112
 Customer: **Automation Inc dba RADAR**
 Specification: **15.247(d) Conducted Spurious Emissions**
 Work Order #: **108261** Date: 5/2/2023
 Test Type: **Conducted Emissions** Time: 14:22:08
 Tested By: E. Wong Sequence#: 23
 Software: EMITest 5.03.20 48VDC

Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 5			

Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 5			

Test Conditions / Notes:

The equipment under test (EUT) is set on a test bench .

The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT.

Frequency Range of EUT: 902.75MHz to 927.25MHz

TX 902.75MHz, 914.75MHz, 927.25MHz

LO Frequency = 915MHz

TARI = 6.25us as intended.

Firmware Version: 0.85.11

Worst case Antenna Pattern and associated power level evaluated.

Lowest Gain: Sector 135, 0 Power setting 29.1dBm

Site A

Test Method: ANSI C63.10 (2013)

Test Environment Conditions:

Temperature: 17°C

Relative Humidity: 47%

Pressure: 99.8kPa

Test Equipment:

15.247(d) Radiated Emissions & Band Edge

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA • (714) 993-6112
 Customer: **Automation Inc dba RADAR**
 Specification: **15.247(d) / 15.209/ 15.205 Radiated Spurious Emissions**
 Work Order #: **108261** Date: 4/28/2023
 Test Type: **Maximized Emissions** Time: 16:09:46
 Tested By: E. Wong Sequence#: 20
 Software: EMITest 5.03.20

Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 4			

Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 4			

Test Conditions / Notes:

The equipment under test (EUT) is set on a Styrofoam tabletop in the maximized emission orientation.

The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT.

Frequency Range of EUT: 902.75MHz to 927.25MHz

TX 902.75MHz, 914.75MHz, 927.25MHz

TARI = 6.25us as intended.

Firmware Version: 0.85.11

Frequency Range of Measurement: 9kHz-1GHz.
 9 kHz -150 kHz; RBW=200 Hz, VBW=600 Hz;
 150 kHz-30 MHz; RBW=9 kHz, VBW=27 kHz;
 30 MHz-1000 MHz; RBW=120 kHz, VBW=360 kHz,

Two Antenna Pattern and associated power level evaluated.

Lowest Gain: Sector 135, 0 Power setting 29.1dBm
 Highest Gain: Sector 180, 0 Power setting 21.4 dBm

Site A
 Test Method: ANSI C63.10 (2013)

Test Environment Conditions:
 Temperature: 20°C
 Relative Humidity: 60%
 Pressure: 98.9kPa

Additional evaluation performed with the EUT lay flat on the Styrofoam. Worst case emission presented.
 No emission detected in the frequency range of 9kHz-30MHz.

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA • (714) 993-6112
 Customer: **Automation Inc dba RADAR**
 Specification: **15.247(d) / 15.209/ 15.205. Radiated Spurious Emissions**
 Work Order #: **108261** Date: 5/1/2023
 Test Type: **Maximized Emissions** Time: 13:50:43
 Tested By: E. Wong Sequence#: 22
 Software: EMITest 5.03.20

Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 4			

Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 4			

Test Conditions / Notes:

The equipment under test (EUT) is set on a Styrofoam tabletop in the maximized emission orientation.

The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT.

Frequency Range of EUT: 902.75MHz to 927.25MHz

TX 902.75MHz, 914.75MHz, 927.25MHz

LO Frequency = 915MHz

TARI = 6.25us as intended.

Firmware Version: 0.85.11

Frequency Range of Measurement: 1-10GHz.
1000 MHz-10000 MHz; RBW=1MHz,VBW=3 MHz

Two Antenna Pattern and associated power level evaluated.

Lowest Gain: Sector 135, 0 Power setting 29.1dBm
Highest Gain: Sector 180, 0 Power setting 21.4dBm

Site A
Test Method: ANSI C63.10 (2013)

Test Environment Conditions:
Temperature: 20°C
Relative Humidity: 60%
Pressure: 98.9kPa

Additional evaluation performed with the EUT lay flat on the Styrofoam. Worst case emission presented.

Band Edge

Band Edge Summary: Low Gain Sector 135

Operating Mode: Single Channel (Low and High)

Frequency (MHz)	Modulation	Ant. Type	Field Strength (dBuV/m @3m)	Limit (dBuV/m @3m)	Results
614	PR-ASK	Integral	29.2	<46	Pass
902	PR-ASK	Integral	69.8	<106.8	Pass
928	PR-ASK	Integral	62.8	< 106.8	Pass
960	PR-ASK	Integral	43.1	<54	Pass

Band Edge Summary : Low Gain Sector 135

Operating Mode: Hopping

Frequency (MHz)	Modulation	Ant. Type	Field Strength (dBuV/m @3m)	Limit (dBuV/m @3m)	Results
614	PR-ASK	Integral	32.3	<46	Pass
902	PR-ASK	Integral	69.7	< 106.8	Pass
928	PR-ASK	Integral	62.6	<106.8	Pass
960	PR-ASK	Integral	42.5	<54	Pass

Band Edge Summary: High Gain Sector 180

Operating Mode: Single Channel (Low and High)

Frequency (MHz)	Modulation	Ant. Type	Field Strength (dBuV/m @3m)	Limit (dBuV/m @3m)	Results
614	PR-ASK	Integral	28.2	<46	Pass
902	PR-ASK	Integral	74.0	<106.8	Pass
928	PR-ASK	Integral	63.4	< 106.8	Pass
960	PR-ASK	Integral	38.2	<54	Pass

Band Edge Summary: High Gain Sector 180

Operating Mode: Hopping

Frequency (MHz)	Modulation	Ant. Type	Field Strength (dBuV/m @3m)	Limit (dBuV/m @3m)	Results
614	PR-ASK	Integral	30.8	<46	Pass
902	PR-ASK	Integral	29.8	< 106.8	Pass
928	PR-ASK	Integral	61.9	<106.8	Pass
960	PR-ASK	Integral	40.9	<54	Pass

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA • (714) 993-6112
 Customer: **Automation Inc dba RADAR**
 Specification: **15.247(d) / 15.209/ 15.205 Radiated Spurious Emissions**
 Work Order #: **108261** Date: 4/28/2023
 Test Type: **Maximized Emissions** Time: 12:02:35
 Tested By: E. Wong Sequence#: 21
 Software: EMITest 5.03.20

Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 4			

Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 4			

Test Conditions / Notes:

The equipment under test (EUT) is set on a Styrofoam tabletop in the maximized emission orientation.

The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT.

Frequency Range of EUT: 902.75MHz to 927.25MHz

TX 902.75MHz, 927.25MHz

TARI = 6.25us as intended.

Firmware Version: 0.85.11

RBW=VBW=100kHz
RBW=120kHz, VBW=360kHz restricted band

Two Antenna Pattern and associated power level evaluated.

Lowest Gain: Sector 135, 0 Power setting 29.1dBm
Highest Gain: Sector 180, 0 Power setting 21.4dBm

Site A
Test Method: ANSI C63.10 (2013)

Test Environment Conditions:
Temperature: 21°C
Relative Humidity: 58%
Pressure: 98.9kPa

Additional evaluation performed with the EUT lay flat on the Styrofoam. Worst case emission presented.

Test Equipment:

15.207 AC Conducted Emissions

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc • 110 N. Olinda Place • Brea, CA • (714) 993-6112
 Customer: **Automation Inc dba RADAR**
 Specification: **15.207 AC Mains - Average**
 Work Order #: **108261** Date: 5/2/2023
 Test Type: **Conducted Emissions** Time: 15:17:47
 Tested By: E. Wong Sequence#: 24
 Software: EMITest 5.03.20 120/60Hz

Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 4			

Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 4			

Test Conditions / Notes:

The equipment under test (EUT) is set on a test bench .

The EUT is powered via a cat 6 network cable (nominal voltage 48Vdc) which is connected to a remotely located POE Injector. Connected to the POE Injector via cat 6 cable is a remotely located computer. The computer is used to set frequency channel, frequency hopping, and modulation of the EUT.

Frequency Range of EUT: 902.75MHz to 927.25MHz

Hopping

TARI = 6.25us as intended.

Worst case Antenna Pattern and associated power level evaluated.

Lowest Gain: Sector 135, 0 Power setting 29.1dBm

Frequency Range of Measurement: 150kHz- 30MHz.

150 kHz-30 MHz;RBW=9 kHz,VBW=30kHz

Test Environment Conditions:

Temperature: 26.5°C

Relative Humidity: 34%

Pressure: 99.8kPa

Site A

Test Method: ANSI C63.10 (2013)

AC conducted emission evaluated at the AC mains of the support POE.

Appendix A: Manufacturer Provided Conducted Power Measurement

 TRSRenTelco 1830 West Airfield Drive DFW Airport, Texas 75261	
Calibration Certificate Traceability Statement	
Asset Number:	1277964
MFG/Model Number:	AT/E5052B
Serial Number:	MY47100447
Description:	SIGNAL SOURCE ANA
Customer:	RADAR
Address:	15150 AVENUE OF SCIENCE, SUITE 200 SAN DIEGO CA 92128
Customer P.O. No:	1624-SD1-RDEQRENTAL
Rental Agreement Number:	1866855-0
Certificate Number:	186685501277964221014
This certificate applies to the instrument identified above and shall not be reproduced, except in full, without written approval of TRS-RenTelco. This certifies that the above instrument was calibrated to manufacturer's specifications using approved procedures and traceable measurement standards. This calibration was performed by an approved vendor. The Quality System of TRS-RenTelco is registered by UL QCS Certificate Number 10000112 to the Quality Management System Standard ISO 9001:2015. TRS-RenTelco's Laboratory is in compliance with MIL-STD-45662A, ANSI/NCSL Z540-1-1994, ISO/IEC 17025:2017 and ISO 10012:2003. Measurement standards are calibrated at planned intervals. Traceability is to the International System of Units (SI) through the National Institute of Standards and Technology (NIST) or other recognized National Metrology Institute (NMI), natural physical constants, consensus standards, or by ratio type measurements using self calibrating techniques. Supporting documentation relative to traceability is available for review by appointment. This instrument is initially being sent to the above customer calibrated and fully functional. Before being placed in service, the instrument was properly stored after being calibrated. Calibration interval time is started when the instrument is initially placed in service. Although the calibration laboratory is in compliance with ANSI/NCSL Z540-1-1994 and MIL-STD-45662A this calibration certificate is issued only as a Traceability Statement and does not carry the requirement of recalibration at the end of rental and customer notification of Out of Tolerance conditions. TRS-RenTelco's calibration interval for this instrument is 12 months.

SUPPLEMENTAL INFORMATION

Measurement Uncertainty

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

Uncertainties reported are worst case for all CKC Laboratories' sites and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of $k=2$. Compliance is deemed to occur provided measurements are below the specified limits.

Emissions Test Details

TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in $\text{dB}\mu\text{V}/\text{m}$, the spectrum analyzer reading in $\text{dB}\mu\text{V}$ was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on subtracting the limit value from the corrected measurement value; a positive margin represents a measurement exceeding the limit, while a negative margin represents a measurement less than the limit.

SAMPLE CALCULATIONS		
	Meter reading	($\text{dB}\mu\text{V}$)
+	Antenna Factor	(dB/m)
+	Cable Loss	(dB)
-	Distance Correction	(dB)
-	Preamplifier Gain	(dB)
=	Corrected Reading	($\text{dB}\mu\text{V}/\text{m}$)

TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE			
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz

SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
