GE-G22

Specifications

Product Name	Dog Training Collar
Product Model	GE-G22
Material	ABS+Nylon
Remote Range	2600' / 787.70'
Remote Control Frequency	433MHz FSK
Receiver Sensitivity	<110dbm S.M.K
Battery Type	Lithium-ion
Battery Capacity	Remote: 100mAh; 1.25Ah Receiver: 350mAh; 1.1Ah
Charging Voltage	TYPE-C 5V/1A
Full Charging Time	1-2H
Continuous Working Time	6H
Working Time	Remote: 30 days Receiver: 15 days
Waterproof Rating	Remote: NOT waterproof Receiver: IPX7 waterproof
Working Temperature	-54°F / -50~154°F
Relative Humidity	20%~90%
Compatibility	Most Breeds and Sizes of Dogs 15 months old 7ozies shock perimeter 8ozes 120 lbs

Design by Haoeful and Manufactured in China

Important Safety Information

Warning and Caution

Warning

1. This product is only designed for training. Punishment or cruelty is prohibited.
2. Do not use it on aggressive dogs because they may have overreaction to cause harm to their owner or others. If you are unsure whether you can train your dog with our product, please consult professional veterinarian or certified trainer.
3. It is not a toy. Keep the product out of reach of children. Only responsible family members can use it.

Caution

1. Please use the product when your pet is under control in a safe area.
2. Please use the product only on healthy dogs.
3. Your dogs should be at least 6 months old. Your pet should be able to recognize basic obedience commands such as "sit" or "stay".
4. Please wear the collar on your dog properly. Wearing too loose may cause bad contact while too tight may cause injury to the dog's neck skin.
5. Please do not wear the collar more than 10 hours a day for your dogs.
6. If it is to be worn for a long time, please adjust the position or take the collar off every 2 hours.
7. Please check the neck skin condition every day to avoid rash/sores in time. If signs of skin discomfort are found on the dog's neck, please stop using it and consult the veterinarian if needed.
8. Please do not let another dog leash to the receiver collar.
9. When the collar is on, do not directly touch the contact probes with your body.
10. When the product is not used for a long time, please charge it every 90 days.
11. Please charge in time when it is in low power to avoid irreparable damage caused by over-discharge of the battery.

8. IPX7 100% Waterproof Receiver Collar: but the remote is NOT waterproof.
9. Rechargeable: rechargeable via the included USB Type-C charging cable by your PC/Laptop/power bank. Time for Battery Fully Charged: 1-2 Hours. (Note: Power adapter is not included in the package).
10. Long Battery Life: Remote: 30 days; Receiver: 15 days (in full charge status).

FAQ

Frequently Asked Questions

FAQ

- Q: Is the static stimulation safe for my pet?
A: While the stimulation is unpleasant, it is harmless to your pet.
- Q: Why doesn't the pet respond when operating the remote control?
A: There may be two reasons: first, beep and vibration are not enough to stimulate the pet; second, the collar is loose, and the strap needs to be tightened to make the contacts touch the skin.
- Q: Once my pet is trained and has been obeying my commands, will he have to continue to wear the training collar?
A: Probably not. They may need to wear the training collar from time to time for reinforcement.
- Q: Why do many similar products cause a more serious sores on the dog's neck?
A: This phenomenon is not caused by E-Shock current, but a kind of "pressure necrosis". The reason is that wearing the collar for a long time or even using the receiver collar as a matching collar, causes the receiver probes to compress or wear the skin for a long time, eventually leading to a severe sores. Please follow the wearing time requirements of the instructions and other related warnings.

General Training Tips

Find the Best Stimulation Level for Your Pet

Training Tips

Important: Always start at the lowest level and work your way up.

- This set has 1 tone, 8 vibration levels and 18 Shock levels, which allows you to choose proper level for your pet. Please begin the training with sound and vibrating setting and the shock mode should always be the last to use. And please always start from the lowest level and slowly work your way up until the dog has a response. In most cases, vibration or shock level 1-7 will be adequate for training. Once you wear the collar on your pet, find the "response level", which is the stimulation level that your dog begins to notice it and it should not make your pet uncomfortable.
- Follow the steps below to find your pet's response shock level:
NOTE: 1. Please make sure the collar presses snugly on your dog's neck. Both of the prongs must make full contact with the dog's neck to form an electrical circuit. 2. Make sure the collar is fully charged and turned on. 3. Please check the shock mode with the included test light tool to ensure the shock function can work.
 1. Choose level 1 and long press shock button for 2-3 seconds. A slight change in your pet's behavior, such as looking around curiously, scratching at his collar, or flicking his ears, indicates this is the proper level for him/her.
 2. If your pet has no reaction, repeat step 1 several times before increasing to higher level.
 3. Increase to level 2 and long press Shock button for 2-3 seconds.
 4. If your pet still has no reaction, repeat several times before moving up to the next level.
 5. Work your way up on the Shock levels until your pet gives response.

General Training Tips

Find the Best Stimulation Level for Your Pet

Training skill

1. Please use the device in a safe and relatively quiet environment to increase training effect and avoid temptation and distraction.
2. Please combine with oral language and gesture during training.
3. Please comfort your pet when he/she is uncomfortable during training.
4. Along with Reward (a treat or hearty rub/praise) as soon as your baby obey the command, which is helpful for good behavior reinforcement and you will get quick results. It will make your pet connect the collar with good things.
5. The training time should not be too long. Please carefully control the time of static stimulation. If the pet feels uncomfortable/hiding or acting harshly, you may decrease the level or stop use it.

Certification Statements

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) This device must accept any interference received, including interference that may cause undesired operation.
Warning: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different
