Antenna Test Report

Test unit: Shenzhen Jianhaitong Antenna Technology Co., Ltd. Test by: Shenzhen kenhaitong antenna technology co,ltd 301, Building B,HezhouZhongkenuoIndustrialPark,HezhouCommunity,HYangcheng Street, Bao'an District, Shenzhen			
Material Material	Electronic wire antenna		
Antenna Type Antenna Type	MonopoleType	Polarization Polarization mode	Linear
Application Scenario Application			
Working frequency band Band	2400-2500MHz	VSWR VSWR	≤1.5
power Power	Max:2W	impedance Impedance	50Ω
Gain dBi	2.02dBi		
Test equipment Test Equipment	HPE5071C,Shielding Room,3D automatic turntable		

Antenna Description::

1. Grounding processing and picture description: no

2. Need to change the motherboard to match: no

- Test voltage: 3.6V, check the antenna contact is good before testing.
- The RF cable of the integrated tester is kept in a natural state and can not be curled.

Specification: test the specified power level, all indicators must conform to the specifications.

2, Test fixture

Purpose: To test the passive parameters of the antenna as accurately as possible.

Production method: The mobile tool is made of a500One end of the 1000 ohm coaxial cable is connected to the test point at the rear end of the matching circuit of the mobile phone motherboard (front end of the RF test hole), and the other end is connected toSMAConnector. The schematic diagram is as follows:

3, Antenna matching circuit/Antenna Matching Circuit

Note: No modification is made to the match.

5, darkroom test equipment and data

5.0 Test equipment

Test system: shielded darkroom

Test environment: Temperature $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$, humidity $50\% \pm 15\%$

Test equipment: When testing passive data, use a network analyzer Agilent E5071C

When testing active data, use a comprehensive tester CMW500
