

# FCC Test Report

**Report No.:** 2505P37465EC

**Applicant:** Huizhou speed wireless technology co.,ltd

**Address:** No.138 Huize Road, Hi-Tech Industrial Park of East River,  
Zhongkai Hi-tech District, Huizhou City, Guangdong Province,  
China

**Product Name:** WiFi+BT Module

**Product Model:** WL00033

**Multiple Models:** N/A

**Trade Mark:** N/A

**FCC ID:** 2BBLK-WL6376B

**Standards:** FCC CFR Title 47 Part 15C (§15.247)

**Test Date:** 2025-02-07 to 2025-03-05

**Test Result:** Complied

**Report Date:** 2025-03-05

**Reviewed by:**

*Abel chen*

Abel Chen  
Project Engineer

**Approved by:**

*Jacob Kong*

Jacob Kong  
Manager

**Prepared by:**

World Alliance Testing & Certification (Shenzhen) Co., Ltd

No. 1002, East Block, Laobing Building, Xingye Road 3012, Xixiang street, Bao'an District, Shenzhen,  
Guangdong, People's Republic of China

This report may contain data that are not covered by the NVLAP accreditation and shall be marked with an asterisk “★”

## Announcement

1. This test report shall not be reproduced except in full, without the written approval of World Alliance Testing & Certification (Shenzhen) Co., Ltd
2. The results in this report apply only to the sample tested.
3. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.
4. The information marked “#” is provided by the applicant, the laboratory is not responsible for its authenticity and this information can affect the validity of the result in the test report. Customer model name, addresses, names, trademarks etc. are included.

# 1 General Information

## 1.1 Client Information

|               |                                                                                                                              |
|---------------|------------------------------------------------------------------------------------------------------------------------------|
| Applicant:    | Huizhou speed wireless technology co.,ltd                                                                                    |
| Address:      | No.138 Huize Road, Hi-Tech Industrial Park of East River, Zhongkai Hi-tech District, Huizhou City, Guangdong Province, China |
| Manufacturer: | Huizhou speed wireless technology co.,ltd                                                                                    |
| Address:      | No.138 Huize Road, Hi-Tech Industrial Park of East River, Zhongkai Hi-tech District, Huizhou City, Guangdong Province, China |

## 1.2 Product Description of EUT

The EUT is WiFi+BT Module that contains BT, BLE, 2.4G and 5G WLAN radios, this report covers the full testing of the BT radio.

|                                     |                                                                                                                               |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Sample Serial Number                | 2XWU-1(BT path 1) for CE test, 2XWU-2(BT path 1), 2XWU-4(BT path 2), 2XWU-5 (BT path 3) for RE test&RF test(assigned by WATC) |
| Sample Received Date                | 2025-01-22                                                                                                                    |
| Sample Status                       | Good Condition                                                                                                                |
| Frequency Range                     | 2402MHz - 2480MHz                                                                                                             |
| Maximum Conducted Peak Output Power | 9.71dBm                                                                                                                       |
| Modulation Technology               | GFSK, $\pi/4$ DQPSK, 8DPSK                                                                                                    |
| Spatial Streams                     | SISO (1TX, 1RX)                                                                                                               |
| Antenna Gain <sup>#</sup>           | 5.85dBi                                                                                                                       |
| Power Supply                        | DC 3.3V                                                                                                                       |
| Adapter Information                 | N/A                                                                                                                           |
| Modification                        | Sample No Modification by the test lab                                                                                        |

## 1.3 Antenna information

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <p><b>15.203 requirement:</b></p> <p>An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.</p> |  |
| <b>Device Antenna information:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| <p>The BT antenna is an external antenna with I-PEX connect, please see product external photos for details.</p>                                                                                                                                                                                                                                                                                                                                                                            |  |

| <b>Note:</b> The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor K with the 95% confidence interval. Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty. |             |                                                         |

## 1.6 Laboratory Location

World Alliance Testing & Certification (Shenzhen) Co., Ltd

No. 1002, East Block, Laobing Building, Xingye Road 3012, Xixiang street, Bao'an District, Shenzhen, Guangdong, People's Republic of China

Tel: +86-755-29691511, Email: [qa@watc.com.cn](mailto:qa@watc.com.cn)

The lab has been recognized as the FCC accredited lab under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No. : 463912, the FCC Designation No. : CN5040.

The lab has been recognized by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements, the CAB identifier: CN0160.

## 1.7 Test Methodology

| The exercise software and the maximum power setting that provided by manufacturer. |           |                                                         |                |              |

| Worst-Case Configuration:                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For radiated emissions, EUT was investigated in three orthogonal orientation, the worst-case orientation was recorded in report                                                                                                                                          |
| The device have three antenna path designs, all the path signals is from same input, each path can be selected to activate/deactivate by connect/disconnect a 0 $\Omega$ resistance, detail please refer the EUT photo, only one path will be selected to use at a time. |
| For RF conducted test, three path output power was tested, full test was performed on the path which has maximum output power                                                                                                                                            |
| For AC power line conducted emission and radiated emission 9kHz-1GHz were performed with the EUT transmits at the channel with highest output power among the three paths as worst-case scenario.                                                                        |
| For radiated emission above 18GHz was performed with the EUT transmits at the channel with highest output power of each path as worst-case scenario.                                                                                                                     |
| For radiated emissions below 30MHz, three antenna orientations (parallel, perpendicular, gound-parallel) were tested, only record the worse case test data in report.                                                                                                    |

## 2.2 Test Auxiliary Equipment

| Manufacturer | Description | Model   | Serial Number |
|--------------|-------------|---------|---------------|
| Dell         | Laptop      | unknown | unknown       |
| Dell         | AC Adapter  | unknown | unknown       |

## 2.3 Interconnecting Cables

| Manufacturer | Description         | Length(m) | From         | To         |
|--------------|---------------------|-----------|--------------|------------|
| unknown      | USB extension cable | 1.0       | Laptop       | EUT        |
| Dell         | AC Power Cable      | 1.5       | Power source | AC Adapter |
| Dell         | DC Power Cable      | 1.5       | AC Adapter   | Laptop     |

## 2.4 Block Diagram of Connection between EUT and AE

*Note: for reference only, the actual connection setup used for testing please refer to the test photos.*

## 2.5 Test Setup

### 1) Conducted emission measurement:

**Note:** The 0.8 m distance specified between EUT/AE/PSU and AMN/AAN, is applicable only to the EUT being measured. If the device is AE then it shall be >0.8 m.

### 2) Radiated emission measurement:

Below 30MHz (3m SAC)

30MHz-1GHz (3m SAC)

## 2.6 Test Procedure

### Conducted emission:

1. The E.U.T is placed on a non-conducting table 40cm from the vertical ground plane and 80cm above the horizontal ground plane (Please refer to the block diagram of the test setup and photographs).
2. Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10 on conducted measurement.
3. Line conducted data is recorded for both Line and Neutral

### Radiated Emission Procedure:

#### a) For below 30MHz

1. All measurements were made at a test distance of 3 m. The measured data was extrapolated from the test distance (3m) to the specification distance (300 m from 9-490 kHz and 30 m from 490 kHz- 30 MHz) to clearly show the relative levels of fundamental and spurious emissions and demonstrate compliance with the requirement that the level of any spurious emissions be below the level of the intentionally transmitted signal. The extrapolation factor for the limits were  $40 \cdot \log(\text{test distance} / \text{specification distance})$ .
2. Loop antenna use, investigation was done on the three antenna orientations (parallel, perpendicular, ground-parallel)
3. The RBW/VBW of receiver is set to 200Hz/1kHz for 9kHz to 150kHz range, to 9kHz/30kHz for 150kHz to 30MHz range for scan Peak emission, 200Hz/9kHz IF BW was used for final measurement in the Quasi-peak or average detection mode for frequency range 9~150kHz/150kHz~30MHz respectively.
4. If the Peak emission complies with the QP limit, then perform final measurement is optional.

#### b) For 30MHz-1GHz:

1. The EUT was placed on the tabletop of a rotating table 0.8 m the ground at a 3 m semi anechoic chamber. The measurement distance from the EUT to the receiving antenna is 3 m.
2. EUT works in each mode of operation that needs to be tested. The highest signal levels relative to the limit shall be determined by rotating the EUT from 0° to 360° and with varying the measurement antenna height between 1 m and 4 m in vertical and horizontal polarizations.
3. The RBW/VBW of receiver is set to 100kHz/300kHz for scan Peak emission, 120kHz IF BW was used for final measurement in the Quasi-peak detection mode.
4. If the Peak emission complies with the QP limit, then perform final measurement is optional.

#### c) For above 1GHz:

1. The EUT was placed on the tabletop of a rotating table 1.5 m the ground at a 3 m fully anechoic room. The measurement distance from the EUT to the receiving antenna is 3 m (1-18GHz) and 1.5 m (above 18GHz).
2. EUT works in each mode of operation that needs to be tested, and having the EUT continuously working. The highest signal levels relative to the limit shall be determined by rotating the EUT from 0° to 360° and with varying the measurement antenna height between 1 m and 4 m in vertical and horizontal

polarizations.

3. The RBW/VBW of spectrum analyzer is set to 1MHz/3MHz for scan Peak emission, for measured average emission, reduce the VBW to 10Hz. (Note: a high VBW (for example 1kHz) may used to scan average emissions to avoid long sweep time.)
4. If the Peak emission complies with the Average limit, then perform average measurement is optional.
5. Open the test software to control the test antenna and test turntable. Perform the test, save the test results, and export the test data.
6. Base on FCC 15.31 (f) (2): measurements may be performed at a distance closer than that specified in the regulations; however, an attempt should be made to avoid making measurements in the near field.

#### **RF Conducted Test:**

1. The antenna port of EUT was connected to the RF port of the test equipment (Power Meter or Spectrum analyzer) through Attenuator and RF cable.
2. The cable assembly insertion loss of 8.0dB (including 6.0 dB Attenuator and 2.0dB cable) was entered as an offset in the power meter. Note: Actual cable loss was unavailable at the time of testing, therefore a loss of 2.0dB was assumed as worst case. This was later verified to be true by laboratory. ( if the RF cable provided by client, the cable loss declared by client)
3. The EUT is keeping in continuous transmission mode and tested in all modulation modes.

## **2.7 Measurement Method**

| Description of Test                     | Measurement Method                           |
|-----------------------------------------|----------------------------------------------|
| AC Line Conducted Emissions             | ANSI C63.10-2013 Section 6.2                 |
| Maximum Conducted Output Power          | ANSI C63.10-2013 Section 7.8.5               |
| 20 dB Emission Bandwidth                | ANSI C63.10-2013 Section 6.9.2               |
| 99% Occupied Bandwidth                  | ANSI C63.10-2013 Section 6.9.3               |
| Channel separation                      | ANSI C63.10-2013 Section 7.8.2               |
| Number of hopping Frequency             | ANSI C63.10-2013 Section 7.8.3               |
| Time of occupancy (dwell time)          | ANSI C63.10-2013 Section 7.8.4               |
| 100kHz Bandwidth of Frequency Band Edge | ANSI C63.10-2013 Section 7.8.7.2&6.10        |
| Radiated emission                       | ANSI C63.10-2013 Section 7.8&6.3&6.4&6.5&6.6 |

## 2.8 Measurement Equipment

| Manufacturer                    | Description                     | Model                 | Management No. | Calibration Date | Calibration Due Date |

| AC Line Conducted Emissions                                       | See details §15.207 (a)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Conducted Output Power                                            | For frequency hopping systems operating in the 2400–2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725–5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400–2483.5 MHz band: 0.125 watts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Channel separation                                                | Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400–2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Number of hopping Frequency                                       | Frequency hopping systems in the 2400–2483.5 MHz band shall use at least 15 channels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Time of occupancy (dwell time)                                    | The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Spurious Emissions,<br>100kHz Bandwidth of Frequency<br>Band Edge | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |

### Conducted Emission Measurement

File :2505P37465E-RF

Data :#4

Date: 2025/2/7

Time: 16:28:05

Limit: QP

Phase: **N**

Temperature: 22.5 °C

Mode: Transmitting

Power: AC 120V/60Hz

Humidity: 42 %

Note: BT 8DPSK-2441

Air Pressure: 1008 hpa

Receiver Setting: 0.15~30MHz; Pre-scan: RBW: 9kHz, DET: PK/AV; Final measure: RBW: 9kHz, DET: QP/AV

\*:Maximum data    x:Over limit    !:over margin

Engineer Signature: Ryan

#### Remark:

Measurement (dBuV)= Reading Level (dBuV) + Correct Factor(dB)

Correct Factor(dB)= LISN Voltage Division Factor (dB)+ Cable loss(dB)

Over Limit = Measurement – Limit

### 3.4 Radiated emission Test Data

Remark:

Corrected Amplitude= Reading level + corrected Factor

Corrected Factor = Antenna factor + Cable loss – Amplifier gain

Margin = Corrected Amplitude – Limit

For the test result of Peak below the Peak limit more than 20dB, which can compliance with the average limit, just the Peak level was recorded.

The emission levels of other frequencies that were lower than the limit 20dB not show in test report.

For emissions in 18GHz-25GHz range, all emissions were investigated and in the noise floor level.

**Test plot for worst case as below:**

## Radiated Band edge

Project No. : 2505P37465E  
Test Mode : Transmitting  
Test Voltage : AC 120V/60Hz  
Environment : 20.9°C/56%R.H./101.2kPa  
Tested by : Bard Huang  
Polarization : horizontal  
Remark : DH5 2402

| --No. | Frequency<br>(MHz) | Reading<br>(dBμV) | Factor<br>(dB/m) | Result<br>(dBμV/m) | Limit<br>(dBμV/m) | Over Limit<br>(dB) | Detector |

| 4960.000        | 47.12                | vertical   | -1.70                   | 45.42                        | 74.00          | -28.58      | Peak   |

Remark:

Corrected Amplitude= Reading level + corrected Factor

Corrected Factor = Antenna factor + Cable loss – Amplifier gain

Margin = Corrected Amplitude – Limit

For the test result of Peak below the Peak limit more than 20dB, which can compliance with the average limit, just the Peak level was recorded.

The emission levels of other frequencies that were lower than the limit 20dB not show in test report.

For emissions in 18GHz-25GHz range, all emissions were investigated and in the noise floor level.

**Test plot for worst case as below:**

### Radiated Band edge

#### 3.5.1 20 dB Emission Bandwidth

| Mode | Channel | Result (MHz) |
|------|---------|--------------|
| DH1  | Low     | 0.823        |
|      | Middle  | 0.829        |
|      | High    | 0.814        |
| 2DH1 | Low     | 1.267        |
|      | Middle  | 1.267        |
|      | High    | 1.270        |
| 3DH1 | Low     | 1.279        |
|      | Middle  | 1.276        |
|      | High    | 1.279        |

#### 3.5.2 99% Occupied Bandwidth

| Mode | Channel | 99% OBW (MHz) |
|------|---------|---------------|
| DH1  | Low     | 0.723         |
|      | Middle  | 0.726         |
|      | High    | 0.720         |
| 2DH1 | Low     | 1.164         |
|      | Middle  | 1.161         |
|      | High    | 1.167         |
| 3DH1 | Low     | 1.161         |
|      | Middle  | 1.164         |
|      | High    | 1.164         |

### 3.5.3 Maximum Conducted Peak Output Power

| Mode | Channel | Result(dBm) |        |        | Limit (dBm) | Verdict |
|------|---------|-------------|--------|--------|-------------|---------|
|      |         | Path 1      | Path 2 | Path 3 |             |         |
| DH1  | Low     | 7.27        | 7.25   | 6.19   | 21.00       | Pass    |
|      | Middle  | 7.08        | 7.09   | 5.76   | 21.00       | Pass    |
|      | High    | 7.10        | 6.76   | 6.10   | 21.00       | Pass    |
| 2DH1 | Low     | 9.67        | 9.04   | 7.37   | 21.00       | Pass    |
|      | Middle  | 9.37        | 8.77   | 7.50   | 21.00       | Pass    |
|      | High    | 9.36        | 8.68   | 8.14   | 21.00       | Pass    |
| 3DH1 | Low     | 9.68        | 9.21   | 7.81   | 21.00       | Pass    |
|      | Middle  | 9.71        | 9.27   | 8.09   | 21.00       | Pass    |
|      | High    | 9.53        | 8.89   | 7.68   | 21.00       | Pass    |

### 3.5.4 Channel separation

| Mode | Channel | Result (MHz) | Limit (MHz) | Verdict |
|------|---------|--------------|-------------|---------|
| DH1  | Low     | 0.999        | 0.853       | Pass    |
|      | Middle  | 1.001        | 0.851       | Pass    |
|      | High    | 1.001        | 0.853       | Pass    |

Note: test only performed on BDR(GFSK) mode, as EDR( $\pi/4$  DQPSK, 8DPSK) mode has the same channel plan to the BDR mode.

### 3.5.5 Number of hopping Frequency

| Mode | Channel | Result | Limit | Verdict |
|------|---------|--------|-------|---------|
| DH1  | Hopping | 79     | 15    | Pass    |
| 2DH1 | Hopping | 79     | 15    | Pass    |
| 3DH1 | Hopping | 79     | 15    | Pass    |

### 3.5.6 Time of occupancy (dwell time)

| Mode | Channel | Pulse width (ms) | Dwell time (s) | Limit (s) | Verdict |
|------|---------|------------------|----------------|-----------|---------|
| DH1  | Hopping | 0.379            | 0.121          | 0.400     | Pass    |
| DH3  | Hopping | 1.643            | 0.263          | 0.400     | Pass    |
| DH5  | Hopping | 2.903            | 0.310          | 0.400     | Pass    |
| 2DH1 | Hopping | 0.394            | 0.126          | 0.400     | Pass    |
| 2DH3 | Hopping | 1.646            | 0.263          | 0.400     | Pass    |
| 2DH5 | Hopping | 2.908            | 0.310          | 0.400     | Pass    |
| 3DH1 | Hopping | 0.395            | 0.126          | 0.400     | Pass    |
| 3DH3 | Hopping | 1.646            | 0.263          | 0.400     | Pass    |
| 3DH5 | Hopping | 2.903            | 0.310          | 0.400     | Pass    |

**Note:**

DH1:Dwell time=Pulse width (ms) × (1600/2/79) ×31.6 s

DH3:Dwell time=Pulse width (ms) × (1600/4/79) ×31.6 s

DH5:Dwell time=Pulse width (ms) × (1600/6/79) ×31.6 s

2DH1: Dwell time=Pulse width (ms) × (1600/2/79) ×31.6 s

2DH3: Dwell time=Pulse width (ms) × (1600/4/79) ×31.6 s

2DH5: Dwell time=Pulse width (ms) × (1600/6/79) ×31.6 s

3DH1: Dwell time=Pulse width (ms) × (1600/2/79) ×31.6 s

3DH3: Dwell time=Pulse width (ms) × (1600/4/79) ×31.6 s

3DH5: Dwell time=Pulse width (ms) × (1600/6/79) ×31.6 s

### 3.5.7 100 kHz Bandwidth of Frequency Band Edge

| Mode | Channel       | Result (dB) | Limit (dB) | Verdict |
|------|---------------|-------------|------------|---------|
| DH1  | Low           | 51.95       | 20.00      | Pass    |
|      | High          | 56.77       | 20.00      | Pass    |
|      | Hopping_Lower | 54.83       | 20.00      | Pass    |
|      | Hopping_Upper | 56.73       | 20.00      | Pass    |
| 2DH1 | Low           | 53.53       | 20.00      | Pass    |
|      | High          | 56.92       | 20.00      | Pass    |
|      | Hopping_Lower | 52.15       | 20.00      | Pass    |
|      | Hopping_Upper | 56.86       | 20.00      | Pass    |
| 3DH1 | Low           | 52.16       | 20.00      | Pass    |
|      | High          | 56.65       | 20.00      | Pass    |
|      | Hopping_Lower | 54.15       | 20.00      | Pass    |
|      | Hopping_Upper | 56.59       | 20.00      | Pass    |
