SAR evaluation

FCC ID: 2BBQS-MOMENTO

MPE Calculation Method

$E (V/m) = (30*P*G)^{0.5}/d$

Power Density: $Pd (W/m2) = E^2/377$

E = Electric Field (V/m)

P = Peak RF output Power (W)

G = EUT Antenna numeric gain (numeric)

d = Separation distance between radiator and human body (m)

The formula can be changed to

$Pd = (30*P*G) / (377*d^2)$

From the peak EUT RF output power, the minimum mobile separation distance, d=0.2m, as well

as the gain of the used antenna, the RF power density can be obtained.

Calculated WIFI Result and Limit

Antenna Gain (Numeric)	Peak Output Power (mW)	Power Density (S) (mW/cm^2)	Limit of Power Density (S) (mW/cm2)	Test Result
1.387 (1.42dBi)	10.96 (10.4dBm)	0.003	1	Compiles

Note:

Antenna Gain (Numeric): 1.387dBi

ERP=10.96+1.42-2.15=10.23dBm(10.544mW)
