

## **MPE ESTIMATION**

FCC ID: 2BC94-TS-002

## 1,Per FCC Part 2.1091 Radiofrequency radiation exposure evaluation: mobile devices, the limit for General Population/ Uncontrolled Exposures

| Frequency    | Power density (mW/ cm <sup>2</sup> ) | Averaging time(minutes) |  |  |
|--------------|--------------------------------------|-------------------------|--|--|
| 300MHz1.5GHz | F/1500                               | 30                      |  |  |
| 1.5GHz100GHz | 1.0                                  | 30                      |  |  |

Note: F= Frequency in MHz

## 2, Estimation Result

| Mode | Frequency<br>(MHz) | Max PK Output power(dBm) | Tune Up<br>Power(dBm) | Max Tune<br>Up<br>power(mW) | Antenna<br>Gain(dBi) | Antenna<br>Gain<br>(linear) | MPE<br>(mW/cm²) |
|------|--------------------|--------------------------|-----------------------|-----------------------------|----------------------|-----------------------------|-----------------|
| EDR  | 2480               | -3.11                    | -3±1(-2)              | 0.63                        | -0.68                | 0.86                        | 0.000108        |

$$Pd = \frac{Pout * G}{4\pi r^2}:$$

Note:

Note: The estimation distance is 20cm

Note:

PK Output power= conducted power.

Conducted power see the test report **HK2310124747-E**, antenna gain=-0.68dBi

The certified sample is portable device, when the minimum test separation distance is >20 cm, a distance of 20 cm is applied to determine RF Exposure test exclusion. The test exclusion threshold is 0.000108 mW/cm² which is< 1.0mW/cm², RF Exposure testing is not required.

----The End-----
