WARNING

If the battery from your product is swallowed, it can cause severe internal burns in just 2 hours and can lead to death. Keep batteries away from infants and children. If the battery compartment does not close securely, stop using the product and keep it away from infants and children. If you think the batteries might have been swallowed or inserted inside any part of the body, seek immediate medical attention.

Possible symptoms of battery consumption:

Unfortunately, it is not always obvious when a button or coin battery is stuck in a child's esophagus.

The child might:

cough, gag, or drool excessively; appear to have an upset stomach or a virus; be sick; point to their throat or stomach; have pain in their abdomen, chest, or throat; be tired or lethargic;

These symptoms may vary or fluctuate, with pain increasing and then subsiding.

A symptom of button and coin battery ingestion is vomiting fresh (bright red) blood. If this

occurs, seek immediate medical help. The lack of obvious symptoms is why it is important to be vigilant about "flat" or spare button or coin batteries in the home and the products that contain them.

This marking on the product, accessories or literature and without the bar on batteries indicates that the product, battery and its electronic accessories (such as charger, a headset, USB cable) should not be disposed of with other household waste.

Symptômes possibles de consommation de batterie:

Malheureusement, il n'est pas toujours évident qu'une pile bouton soit coincée dans l'œsophage d'un enfant.

L'enfant pourrait:

Tousser, avoir des haut-le-cœur ou baver excessivement; Avoir des maux d'estomac ou un virus; Être malade; Pointer leur gorge ou leur estomac; Avoir des douleurs à l'abdomen, à la poitrine ou à la gorge, être fatigué ou léthargique; Ces symptômes peuvent varier ou fluctuer, la douleur augmentant puis diminuant. Un symptôme de l'ingestion de piles boutons et de piles bouton est le vomissement de sang. Si cela se produit, consultez immédiatement un médecin.

L'absence de symptômes évidents explique pourquoi il est important d'être vigilant à l'égard des piles boutons dans la maison et des produits qui les contiennent.

Ce marquage sur le produit, les accessoires ou la documentation et sans la barre sur les batteries indique que le produit, la batterie et ses accessoires électroniques (tels qu'un chargeur, écouteurs, un câble USB) ne doivent pas être jetés avec les autres déchets ménagers.
