

User Guide

Wireless Bluetooth mouse dongle OGM 8K (X-203)

1. Log in to the official website at www.waizowl.com to download the driver.
2. Upgrade the 8K receiver and compatible mouse to the latest firmware.
3. Insert the original data cable into the 8K receiver.
4. Power on the mouse and switch it to 2.4G mode by pressing the left/middle/right buttons simultaneously for at least 3 seconds. Once the mouse indicator light changes, connect the 8K receiver to the computer. The 8K receiver indicator light will change from breathing to solid, indicating successful pairing.

Indicator Lights

1. The 8K receiver features an indicator light that displays the mouse's connection status and reporting rate.

2. Indicator light states

Mouse powered off/sleeping: Green light breathing

Mouse operational: Solid green light

3. Mouse reporting rate indicators

125(red)-250(green)-500(blue)-1000(purple)-2000(aqua)-4000 (yellow) -8000(white)

Common Issues

1. Why can't I pair the 8K receiver?

Ensure your mouse is compatible with the 8K receiver. Check if both the compatible mouse and the 8K receiver have the latest firmware.

2. Why does my computer lag or fail to achieve the set reporting rate when I set a high reporting rate?

High reporting rates require certain CPU performance and memory frequency. Low-spec computers might experience lag or fail to achieve the preset reporting rate.

3. Why can't I enable the Performance Mode for 2K/8K?

2K/8K are inherently high-speed (performance) modes and cannot be activated separately.

4. After pairing the 8K receiver, can I still use the standard 2.4G receiver that came with the

mouse?

You can connect either the 8K receiver or the original 1K receiver to the computer to use the mouse. If both receivers are connected simultaneously, the 8K receiver will be given priority. You can switch to the other receiver using the mouse's model-switching button.

FCC STATEMENT:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

Warning: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

RF warning statement:

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
