

## TEST REPORT

Product Name: Wireless Microphone System  
FCC ID: 2BCL6-SK750  
Trademark: N/A  
Model Number: SK750  
Prepared For: Enping Skerei Electric Acoustic Equipment Factory  
Address: Workshop 1 on the third floor of 1# plant, No. 111, Enzhou Industrial Avenue, Dongcheng Town, Enping City  
Manufacturer: Enping Skerei Electric Acoustic Equipment Factory  
Address: Workshop 1 on the third floor of 1# plant, No. 111, Enzhou Industrial Avenue, Dongcheng Town, Enping City  
Prepared By: Shenzhen CTB Testing Technology Co., Ltd.  
Address: 1&2/F., Building A, No.26, Xinhe Road, Xinqiao, Xinqiao Street, Bao'an District, Shenzhen, Guangdong, China  
Sample Received Date: Jul. 03, 2023  
Sample tested Date: Jul. 03, 2023 to Sep. 12, 2023  
Issue Date: Sep. 12, 2023  
Report No.: CTB230821029RF  
Test Standards: FCC Part15.236  
ANSI C63.10:2013  
Test Results: PASS  
Remark: This is FM radio test report.

## 2. TEST SUMMARY

The Product has been tested according to the following specifications:

Test Item	Test Requirement	Test method	Result
<b>AC Power Line Conducted Emission</b>	47 CFR Part 15 Subpart C Section 15.207	ANSI C63.10-2013	Pass
<b>Radiated Spurious emissions</b>	47 CFR Part 15 Subpart C Section 15.236(g)	ANSI C63.10-2013	PASS
<b>RF Power Output</b>	47 CFR Part 15 Subpart C Section 15.236(d)	ANSI C63.10-2013	PASS
<b>Occupied Bandwidth</b>	47 CFR Part 15 Subpart C Section 15.236(f) (2)	ANSI C63.10-2013	PASS
<b>Necessary Bandwidth</b>	47 CFR Part 15 Subpart C Section 15.236(g)	ANSI C63.10-2013	PASS
<b>Frequency Stability</b>	47 CFR Part 15 Subpart C Section 15.236(f) (3)	ANSI C63.10-2013	PASS
<b>Antenna Requirement</b>	47 CFR Part 15 Subpart C Section 15.203/15.247 (b)	/	PASS

Remark:

Test according to ANSI C63.10-2013.

### 3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the Product as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Item	Uncertainty
Occupancy bandwidth	54.3kHz
Conducted output power Above 1G	0.9dB
Conducted output power below 1G	0.9dB
Power Spectral Density , Conduction	0.9dB
Conduction spurious emissions	2.0dB
Out of band emission	2.0dB
3m chamber Radiated spurious emission(9K-30MHz)	4.8dB
3m chamber Radiated spurious emission(30MHz-1GHz)	4.6dB
3m chamber Radiated spurious emission(1GHz-18GHz)	5.1dB
3m chamber Radiated spurious emission(18GHz-40GHz)	3.4dB
humidity uncertainty	5.5%
Temperature uncertainty	0.63°C
frequency	$1 \times 10^{-7}$
Conducted Emission (150KHz-30MHz)	3.2 dB
Radiated Emission(30MHz ~ 1000MHz)	4.8 dB
Radiated Emission(1GHz ~6GHz)	4.9 dB

#### 4. PRODUCT INFORMATION AND TEST SETUP

##### 4.1 Product Information

Model(s): SK750  
Model Description: N/A  
Hardware Version: V1.0  
Software Version: V1.0  
  
Operation Frequency: Microphone1: 658.80MHz  
Microphone2: 658.80MHz  
Type of Modulation: FM  
Antenna installation: Spring antenna  
Antenna Gain: 1.0dBi  
Ratings: DC 5V charging from adapter  
DC 3.7V by Battery

##### 4.2 Test Setup Configuration

See test photographs attached in EUT TEST SETUP PHOTOGRAPHS for the actual connections between Product and support equipment.

##### 4.3 Support Equipment

Item	Equipment	Mfr/Brand	Model/Type No.	Series No.	Note
1	Adapter	JIYIN	JY-05100C	/	/

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

#### 4.4 Channel List

Microphone1, Microphone2:

CH No.	Frequency (MHz)						
1	658.80	/	/	/	/	/	/

#### 4.5 Test Mode

All test mode(s) and condition(s) mentioned were considered and evaluated respectively by performing full tests, the worst data were recorded and reported.

Microphone1, Microphone2:

Test mode	Low channel	Middle channel	High channel
Transmitting (FM)	/	658.80MHz	/

#### 4.6 Test Environment

Humidity(%):	54
Atmospheric Pressure(kPa):	101
Normal Voltage(DC):	3.7V
Normal Temperature(°C)	23
Low Temperature(°C)	0
High Temperature(°C)	40

## 5. TEST FACILITY AND TEST INSTRUMENT USED

### 5.1 Test Facility

All measurement facilities used to collect the measurement data are located at 1&2F., Building A, No. 26, Xinhe Road, Xinqiao, Xinqiao Street, Bao'an District, Shenzhen, Guangdong, China. The site and apparatus are constructed in conformance with the requirements of ANSI C63.4 and CISPR 16-1-1 other equivalent standards.

## 6. AC POWER LINE CONDUCTED EMISSION

### 6.1 Block Diagram Of Test Setup

### 6.2 Limit

**Table 4 - AC power-line conducted emissions limits**

Frequency (MHz)	Conducted limit (dB $\mu$ V)	
	Quasi-peak	Average
0.15 - 0.5	66 to 56 <sup>Note 1</sup>	56 to 46 <sup>Note 1</sup>
0.5 - 5	56	46
5 - 30	60	50

**Note 1:** The level decreases linearly with the logarithm of the frequency.

\* Decreasing linearly with the logarithm of the frequency

### 6.3 Test procedure

- 1) The mains terminal disturbance voltage test was conducted in a shielded room.
- 2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a  $50\Omega/50\mu\text{H} + 5\Omega$  linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.
- 3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,
- 4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under

test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane.

This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.

- 5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10:2013 on conducted measurement.
- 6) All modes were tested at AC 120V and 240V, only the worst result of AC 120V 60Hz was reported.
- 7) If a EUT received DC power from the USB Port of Notebook PC, the PC's adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.

## 6.4 Test Result

## 7. TRANSMITTER SPURIOUS EMISSION

### 7.1 Block Diagram Of Test Setup

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

### 7.2 Limit

Spurious emissions are emissions outside the frequency range(s) of the equipment. The power of the spurious emissions shall not exceed the limits of table as below:

State	Frequency	Other Frequencies	Frequencies above
	<b>47 MHz to 74 MHz</b> <b>87,5 MHz to 137 MHz</b> <b>174 MHz to 230 MHz</b> <b>470 MHz to 862 MHz</b>	<b>Other Frequencies</b> below 1 000 MHz	<b>Frequencies above</b> 1 000 MHz
Operation	4 nW	250 nW	1 $\mu$ W
Standby	2 nW	2 nW	20 nW

### 7.3 Test procedure

**Below 1GHz test procedure as below:**

- a.The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b.The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c.The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d.For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rota table table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e.The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f.If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

**Above 1GHz test procedure as below:**

- g.Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 meter to 1.5 meter( Above 18GHz the distance is 1 meter and table is 1.5 meter).
- h.Test the EUT in the lowest channel ,the middle channel ,the Highest channel
- i.Repeat above procedures until all frequencies measured was complete.
- j. Full battery is used during test

Receiver set:

Frequency	Detector	RBW	VBW	Remark
0.009MHz-0.090MHz	Peak	10kHz	30KHz	Peak
0.009MHz-0.090MHz	Average	10kHz	30KHz	Average
0.090MHz-0.110MHz	Quasi-peak	10kHz	30KHz	Quasi-peak
0.110MHz-0.490MHz	Peak	10kHz	30KHz	Peak
0.110MHz-0.490MHz	Average	10kHz	30KHz	Average
0.490MHz -30MHz	Quasi-peak	10kHz	30kHz	Quasi-peak
30MHz-1GHz	Quasi-peak	120 kHz	300KHz	Quasi-peak
Above 1GHz	Peak	1MHz	3MHz	Peak
	Peak	1MHz	10Hz	Average

## 7.4 Test Result

Below 1GHz Test Results:

Antenna polarity: H

Worst case-FM

No.	Mk.	Freq.	Reading	Correct	Measure-	Limit	Over	
			Level					
1		42.9750	-66.48	10.92	-55.56	-36.00	-19.56	peak
2		94.5940	-72.03	1.23	-70.80	-54.00	-16.80	peak
3		266.1419	-76.00	11.84	-64.16	-36.00	-28.16	peak
4		474.6661	-78.07	16.30	-61.77	-54.00	-7.77	peak
5	*	679.9600	-76.62	19.21	-57.41	-54.00	-3.41	peak
6		876.7828	-77.27	20.72	-56.55	-36.00	-20.55	peak

### Remark:

1. Factor = Cable lose + Antenna factor - Pre-amplifier; Margin = Measurement- Limit  
Measurement=Reading level+correct facto
2. The emission levels of other frequencies are very lower than the limit and not show in test report.
3. Note: a filter is used during the test.

Antenna polarity: V

Remark:

Absolute Level = Receiver Reading + Factor

Factor = Antenna Factor + Cable Loss – Pre-amplifier

## 8. CONDUCTED OUTPUT POWER

### 8.1 Block Diagram Of Test Setup

### 8.2 Limit

The maximum radiated power shall not exceed the following values:

- (1) In the bands allocated and assigned for broadcast television and in the 600 MHz service band: 50 mW EIRP
- (2) In the 600 MHz guard band and the 600 MHz duplex gap: 20 mW EIRP.

### 8.3 Test procedure

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

## 8.4 Test Result

Microphone1:

Frequency (MHz)	COMDUCTED OUTOUT POWER (dBm)	Antenna Gain (dBi)	EIRP (dBm)	FCC Limit (mW)	FCC Limit (dBm)	Reselt
658.80	8.809	1	9.809	20	13	PASS

## Microphone2:

Frequency (MHz)	COMDUCTED OUTOUT POWER (dBm)	Antenna Gain (dBi)	EIRP (dBm)	FCC Limit (mW)	FCC Limit (dBm)	Reselt
658.80	8.829	1	9.829	20	13	PASS

## 9. OCCUPIED BANDWIDTH

### 9.1 Block Diagram Of Test Setup

### 9.2 Limit

One or more adjacent 25 kHz segments within the assignable frequencies may be combined to form a channel whose maximum bandwidth shall not exceed 200 kHz. The operating bandwidth shall not exceed 200 kHz.

### 9.3 Test procedure

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 3 KHz RBW and 10 KHz VBW.

### 10.4 Test Result

#### Microphone1:

Test Mode	Frequency (MHz)	99% OBW (KHz)	Limit (KHz)	Result
FM	658.8	66.927	200	PASS

Note: All modes of operation were Pre-scan and the worst-case emissions are reported.

#### Microphone2:

Test Mode	Frequency (MHz)	99% OBW (KHz)	Limit (KHz)	Result
FM	658.8	65.586	200	PASS

Note: All modes of operation were Pre-scan and the worst-case emissions are reported.

## 10. NECESSARY BANDWIDTH

### 10.1 Block Diagram Of Test Setup

### 10.2 Limit

Emissions within the band from one megahertz below to one megahertz above the carrier frequency shall comply with the emission mask in §8.3 of ETSI EN 300 422-1 V1.4.2 (2011-08) as below:

The transmitter output spectrum shall be within the mask defined in figure below where B is the declared channel bandwidth

### 10.3 Test procedure

- 1) With the Low Frequency (LF) audio signal generator set to 500 Hz, the audio input level to the EUT shall be Adjusted to 8 dB below the limiting threshold (-8dB limit) as declared by the manufacturer.
- 2) The corresponding audio output level from the demodulator shall be measured and recorded.
- 3) The input impedance of the noise meter shall be sufficiently high to avoid more than 0.1 dB changes in input level when the meter is switched between input and output.
- 4) The audio input level shall be increased by 20 dB, i.e. to 12 dB (lim), and the corresponding change in output level shall be measured.
- 5) It shall be checked that the audio output level has increased by  $\leq 10$  dB.
- 6) If the step 5 is not met, the initial audio input level shall be increased from -8 dB (lim) in 1 dB steps until the above condition is fulfilled, and the input level recorded in the test report. This level replaces the value derived from the manufacturer's declaration and is defined as -8dB (lim).
- 7) Measure the input level at the transmitter required to give +12 dB (lim) and record the EUT output level test plots by the spectrum analyzer.
- 8) The transmitter RF output spectrum shall be measured, using a spectrum analyser with the following settings:
  - centre frequency: fc: Transmitter (Tx) nominal frequency;
  - dispersion (Span): fc - 1 MHz to fc + 1 MHz;
  - Resolution BandWidth (RBW): 1 kHz;

-Video BandWidth (VBW): 1 kHz;  
-detector: Peak hold.

#### 10.4 Test Result

Microphone1:

	<b>Bandwidth(B)</b>	<b>B/2</b>	<b>0.35B</b>
Manufacturer declare	200 KHz	100KHz	70KHz

Microphone2:

	<b>Bandwidth(B)</b>	<b>B/2</b>	<b>0.35B</b>
Manufacturer declare	200 KHz	100KHz	70KHz

## 11. FREQUENCY STABILITY

### 11.1 Block Diagram Of Test Setup

### 11.2 Limit

The frequency tolerance of the carrier signal shall be maintained within  $\pm 0.005\%$  of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. Battery operated equipment shall be tested using a new battery.

### 11.3 Test procedure

a, With the Low Frequency (LF) audio signal generator set to 500 Hz, the audio input level to the EUT shall be Adjusted to 8 dB below the limiting threshold (-8dB limit) as declared by the manufacturer.

#### Frequency stability versus environmental temperature

1) Setup asTest Configuration for frequencies measured at ambient temperature if it is within 15°C to 25°C. Otherwise, an environmental chamber set for a temperature of 20°C shall be used.

1) Turn on EUT and set SA center frequency to the right frequency needs to be measured. Then set SA RBW to 3 kHz, VBW to 10kHz and frequency span to 500 kHz. Record this frequency to be a reference.

1) Set the temperature of chamber to 50 °C. Allow sufficient time (approximately 30 min) for the temperature of the chamber to stabilize. While maintaining a constant temperature inside the chamber, turn the EUT on and measure the EUT operating frequency.

1) Repeat step 2 with a 10°C decreased per stage until the lowest temperature -20°C is measured, record all measurement frequencies.

#### b, Frequency stability versus input voltage

1) Setup asTest Configuration for frequencies measured at ambient temperature if it is within 15°C to 25°C. Otherwise, an environmental chamber set for a temperature of 20°C shall be used. Install new batteries in the EUT.

1) Set SA center frequency to the right frequency needs to be measured. Then set SA RBW to 3kHz, VBW to 10kHz and frequency span to 500 kHz. Record this frequency to be a reference.

1) For non hand carried, battery operated device, supply the EUT primary voltage with 85 and 115 percent of the nominal value and record the frequency.

## 11.4 Test Result

Microphone1:

Reference Frequency: 658.80MHz					
Voltage ( V )	Temperature(°C)	Frequency error (MHz)	Frequency Tolerance (%)	Limit (%)	Result
3.70	-20	0.00651	0.000986%	±0.005	PASS
	-10	0.00605	0.000917%		
	0	0.00857	0.001298%		
	10	0.00597	0.000905%

## 12. ANTENNA REQUIREMENT

### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

### 15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

### **EUT Antenna:**

The EUT antenna is Spring antenna. The best case gain of the antenna is 1.0dBi.
