Scenario and Automation

You can create an infinite number of Scenarios and Automations making the various devices interact with each other.

By pressing **Smart** at the bottom center of the home page and then + on the upper right corner, you can choose add a new scenario or a new automation.

- A Scenario is a set of commands assigned to the various devices that will be activated simultaneously whenever you click on the created scenario or in the days and hours programmed by you
- Automation is the execution of a specific command given to a device when a specific condition has been activated

Frequent Questions

1) Can I group multiple LUXRAM Smart devices together?
Yes, you can group multiple devices of the same type together, by room, or location or however else you want. The same devices can be in multiple groups.
From your main devices list, choose one of the devices you want to group, press the edit symbol on the top right and click **Create Group**. You will then be able to choose which devices you would like to group together, confirm and name the new group then save.
Now, in the page of the device list, you will also find the new group just created. Each command given to the group will be executed simultaneously by all the devices belonging to that group.

2) How many devices can control?
Luxram App can control unlimited amount of devices in an unlimited amount of locations. But take note that your Wi-Fi router may have a limitation of how many devices can be connected to one router.
3) The device appears offline or unreachable, what should I do?
Make sure your Wi-Fi router is online and in range.
Make sure you have the latest LUXRAM Smart App by pressing **Check for Updates** in your device settings.

09 FCC Statement
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
—Reorient or relocate the receiving antenna.
—Increase the separation between the equipment and receiver.
—Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
—Consult the dealer or an experienced radio/TV technician for help.
Note: The Grantee is not responsible for any changes or modifications not expressly approved by the party responsible for compliance, such modifications could void the user's authority to operate the equipment.
The device has been evaluated to meet general RF exposure requirement.
To maintain compliance with FCC's RF exposure guidelines, the distance must be at least 20 cm between the radiator and your body, and fully supported by the operating and installation configurations of the transmitter and its antenna(s).
