

3WWDZ-15 Agriculture Drone

User Manual V0.1

Topxgun (Nanjing) Robotics Co., Ltd.
2022.11

Usage Recommendation

Topxgun provides user with the following documents:

1. "Packing List"
2. "User Manual of Plant Protection UAV FP150"
3. "Usage Guidelines of Agriculture Assistant APP"

For detailed usage and functions, please refer to "User Manual of Plant Protection UAV FP300" and "Usage Guidelines of Agriculture Assistant APP". You can also follow us on YouTube Channel for tutorials and tips in the operation.

* To keep you updated, some documents may be taken as E-documents.

User Manual of Plant Protection UAV

Usage Guidelines of Agriculture Assistant APP

Agriculture Assistant APP

Preface

The plant protection UAV 3WWDZ-15A is a mature multi-rotor aircraft, leading the industry in terms of function, appearance, control, safety and other aspects. There are certain usage risks of multi-rotor drones due to the mechanism and structure. Please strictly follow the safety tips and user manual during the operation. Violation of regulations when using this drone may result in direct or indirect loss and damage.

Disclaimer

Please read the manual carefully before using the aircraft. Once the drone is used, it is deemed to be an acknowledgement and acceptance of all the content of this user manual. This drone is suitable for people 18 years of age and older. Topxgun is not responsible for the loss of personal or property due to the following problems:

1. The user does not assemble or use the drone as required by this manual.
2. The user operates the drone in poor physical or mental conditions such as drinking, drug abuse, fatigue, etc.
3. The user actively or intentionally operates the drone to create damage.
4. The user modifies the drone without using the accessories from Topxgun, which causes malfunction of the drone.
5. Injury caused by the user's misoperation or subjective misjudgment.
6. Damage caused by natural causes, such as aging of the circuit and so on that affects the aircraft.
7. Damage caused by the user's operation of the drone while knowing that it is in an abnormal working condition.
8. The user still operates the drone under severe weather conditions such as typhoons, hail and fog.
9. The user operates the drone in the magnetic interference area, radio interference area and government no-fly area.
10. The user operates the drone in case of poor visibility and occlusion of the line of sight.
11. The user operates the drone to cause the infringements by obtaining any data, image data and other infringement behaviors.
12. Other losses that are not within the scope of the company's liability.

Safety operation instructions

1. Pesticide Usage

- Wear protective clothing to prevent direct body contact with the pesticide while operating.
- Avoid the use of powder pesticides as much as possible or else they may reduce the service life of the spraying system.
- Use clean water to prepare the pesticide to avoid blocking the strainer. Do not remove any filter and clear any blockages before using the equipment.
- After using the pesticide, please clean up the residual liquid in time. It is strictly forbidden to pollute the river and drinking water source and ensure that it will not cause harm or impact on people, animals and the environment in the surroundings.
- The effect of the pesticide is closely related to the concentration of the pesticide, the spraying rate, the altitude of the drone from crops, the wind direction, the wind speed, etc. The above factors should be taken into account comprehensively when using the pesticide in order to achieve the best effect.
- Strictly follow the safety instructions of the pesticide production company.
- Particular working fluids are prohibited.

2. Usage Environment

- Always fly in an open space, away from the crowd.
- It is recommended to fly below 2000 meters.
- It should fly in an environment with a temperature between 0℃ and 40℃.
- It is recommended to fly in an environment with a wind speed below level 4.
- It is strictly forbidden to fly in rain, fog, snow or other extreme weather.
- It is strictly forbidden to fly indoors.
- It must fly in a legal area. Before flying in the legal area, please consult your local flight management department to comply with local laws and regulations.

3. Pre-flight Inspection

- Make sure that every device is fully charged.
- Make sure that all parts are in good condition. If there are some parts worn or damaged, please replace them before the flight. Make sure that the landing gear and the tank are tightly mounted and all the screws are firmly tightened.
- Make sure that the propellers are intact and firmly mounted, the propellers and arms are fully extended, and the screws are tightened.
- Make sure the motors are clean and free of damage.
- Make sure the spraying system is free of blockage and works properly.
- Please calibrate the compass before the flight.

4. Operation

- Keep away from the rotating propellers and motors.
- When folding the drone, avoid crushing and damaging the drone parts.
- Do not exceed the take-off weight of 78.8Kg to avoid danger.
- Pilots must be professionally trained and pass the assessment, and the untrained personnel must not fly the drone.
- Make sure that the propellers are removed before calibrating the drone and upgrading the firmware.
- When the drone and the remote controller are in the frequency-connecting process, make sure that the propellers are removed and that people and animals are far away from the motor.
- A pilot should not operate this product under the influence of alcohol, fatigue, illness, etc.
- If the operating environment does not meet the working condition of the module, the drone will not avoid obstacles when it returns automatically. If the remote-control signal is normal, the flight speed and altitude can be controlled using the remote controller.
- When working, be sure to turn on the remote controller first, and then turn on the power supply. After landing, turn off the power supply first and then turn off the remote controller.
- Please maintain control of the drone throughout the process and do not rely entirely on the information provided by the hand-held ground station(remote controller).
- Obstacle avoidance and terrain following functions will not be available in the specific flight mode or environment. Please observe the attitude of the drone at all times and judge the flight condition reasonably to avoid obstacles in time.

5. Flight Restrictions and Local Laws

- Browse the official website of the Aviation Authority of your location for the latest list of restricted flight areas.
- The maximum control flight altitude is 20 meters. Please consult the local flight management department before taking off, to comply with local laws and regulations.

Special precautions: Safety operating instruction notes include but are not limited to the above items.

Intellectual Property Rights

The intellectual property rights of this product and its manual belong to Topxgun Robotics Co., Ltd. Without written permission, any organization or individual may not copy, reproduce or distribute them in any form. If the quotation is required, the source should be indicated and the manual should not be modified, deleted or quoted contrary to its original intention.

About this manual

This manual is used as a user's guide. Photos, graphics, charts and illustrations in the manual are only for explanatory and illustrative purposes and may differ from the actual product. Please refer to the actual product.

Due to product upgrades or other reasons, the content of this document will be updated from time to time. Unless otherwise agreed, it is without further notice.

Before using this product, please read this manual carefully.

1. Product Overview

The agricultural drone 3WWDZ-15A Agricultural plant protection UAV has undergone several iterations of upgrades, and now reaches the leading level in practicability, reliability and safety. The drone is full-body waterproof, dust-proof and anti-corrosion. Some key modules, such as spraying system, system and power system, are IP67 rated ensuring easy cleaning and maintenance. The GNSS+RTK positioning system can achieve centimeter-level high precision positioning, and also supports dual antenna anti-magnetic interference direction-finding technology. The drone is equipped with wide-angle FPV camera and high-definition digital image transmission system. Users can observe the environment in real time.

1.1. Smart Battery Introduction

ZAB1420-01 battery is a polymer lithium power battery, featuring a compact size, light weight and large capacity. The battery integrates high-precision voltage, current and temperature acquisition, autonomous power algorithm, and evaluates the capacity and power of each core in the series system. In the process of using batteries, they will learn the parameters of the batteries independently, and a new balancing strategy will make the batteries safer and smarter, achieve the best working and storage status, and extend the battery life.

1.1.1. Component Definition

Figure 1-1 Battery Component

1. Handle 2. Indicator 3. Charging port

1.1.2. Specification Parameters

Subject	Parameter
Typical Capacity	20000mAh
Nominal Voltage	53.2V
Standard Charging Current	10A (Environment Temperature 25±5℃)
Maximum Charging Current	80A
Limited Charging Voltage	60.9V
Maximum Discharging Current	160A
Operating Temperature	5~68℃ (Charge) -20~90℃(Discharge)
Storage Temperature	Long Term Storage: -10℃ ~ 30℃ (Please recharge every 3 months) Short Term Storage: -10℃~45℃
Weight	7.8Kg

1.1.3. LED Indicator Status

1.1.3.1. Battery Status Display

Function	Precondition	Operation	LED Indicator	Note
Battery Level Checking	Sleep/Power off	0 (Short Press)	Display the current battery level for 5s	The battery level will be displayed for 5s after a short press
Power On	Sleep/Power off	0-1 (Short Press+Long Press >1s)	0, display the current battery level; 0-1, turn off the display. The LED indicators will light up one by one, then display the current battery level	0-1 MOS has been activated after power on
Power Off	Power On	0-1 (Short Press+Long Press)	0, display the current battery level; 0-1, turn off the display. The LED indicators will go off one by one	0-1 MOS has been deactivated after power off

RC Pairing	Battery is activated and RC is on the pairing interface	In the power on status 2 (Long Press>5s)	The LED 3 and 4 will flash while pairing. After the pairing is completed, LED indicators will revert to the original status	
Disconnect UPS	Battery is activated	Short press for 5 times, 0-0-0-0-0	0, display the current battery level	1. UPS is deactivated

1.1.3.2. Battery Level Display

Notes: “●” means solid on, “□” means flash, “○” means off.

LED5	LED1	LED2	LED3	LED4	Battery Level
○	●	●	●	●	95%-100%
○	●	●	●	□	90%-94%
○	●	●	●	○	80%-89%
○	●	●	□	○	70%-79%
○	●	●	○	○	60%-69%
○	●	□	○	○	50%-59%
○	●	○	○	○	40%-49%
○	□	○	○	○	20%-39%
□	□	○	○	○	< 20%

1.1.3.3. Charging Status

LED1	LED2	LED3	LED4	SOC
□	□	○	○	0-59%
□	□	□	○	60%-79%
□	□	□	□	80%-100%

1.1.3.4. Error and Other Indications

Error Info	Indicator	Trigger Conditions	End Condition
Battery Updating	LED show the progress	Start updating	Updating Complete

High Charging Temperature	LED5 Flash + LED 4 Flash 3 times per second	Charging and temperature > OcTA	Stop Charging or temperature < OcTR
Charge Overcurrent	LED5 Flash + LED 2 Flash 2 times per second	Charging Current > OCCA	Charging Current < OCCR
Low Discharge Voltage	LED5 Flash + LED 3 Flash 2 times per second	Discharging and the voltage < UVA	Stop discharging or voltage > UVR
High Charging Voltage	LED5 Flash + LED 3 Flash 3 times per second	Charging and Voltage > OVA	Stop charging or voltage < OVR
Low Charging Temperature	LED5 Flash + LED 4 Flash 2 times per second	Charging and temperature < UcTA	Stop charging or temperature > UcTR
Battery Damage	LED5 Solid on after boot up	Vmin < 1.5V, or Vmin>3.2V, δV > 1V	/
Short Circuit Protection/Discharge Overcurrent	LED5 Flash + LED 2 Flash 3 times per second	Short circuit or discharge overcurrent	1 min after unloading

Parameter reference:

Parameter	Description
OVA	Over-voltage Alarm
OVR	Overvoltage recovery
OCCA	Charging overcurrent alarm
OCCR	Charging overcurrent recovery
UcTA	Charging low temperature alarm
UcTR	Charging low temperature recovery
OcTA	Charging high temperature alarm
OcTR	Charging high temperature alarm recovery
UVA	Under voltage alarm
UVR	Undervoltage recovery

Project	LED Indicator	Description	Notes
Battery	LED indicate updating	Show the progress	

Updating	progress		
High Charging Temperature	LED5 Flash + LED 4 Flash 3 times per second	High battery charging temperature	Stop charging
Low Charging Temperature	LED5 Flash + LED 4 Flash 2 times per second	Low battery charging temperature	Stop charging
High Charging Voltage	LED5 Flash + LED 3 Flash 3 times per second	High battery charging voltage	需停止充电
Charge Overcurrent	LED5 Flash + LED 2 Flash 2 times per second	Excessive battery charging current	Stop charging
Discharge Low Voltage	LED5 Flash + LED 3 Flash 2 times per second	Low battery discharge voltage	Stop charging
Short Circuit/Over Current	LED5 Flash + LED 2 Flash 3 times per second	Excessive battery discharge current	Recover after unloading for one minute
Battery Failure	LED5 Solid on after boot up	The battery cell voltage is less than 1.5V or the differential pressure is greater than 1V	Contact after-sales service personnel, and do not disassemble by yourself

Notes:

1. Activate the battery only after it is well connected to the drone.
2. Disconnect the battery after it is turned off.
3. Charge the battery to 60% every 3 months to ensure a longer service lifetime.
4. Before using, ensure sufficient battery level. When the battery has not been used for a long time, please use the dedicated charger to discharge the battery to the storage voltage, and then store it in a dry and ventilated environment.
5. This battery needs to be charged with a dedicated charger (ZAC6160-01). In order to avoid accidents, please do not change the charger in any condition.
6. Do not use batteries if they emit odors or heat, or they are in an abnormal shape/color or has any other problems. If the battery is in use or charging, it should be immediately removed from the drone or charger. Stop using this kind of battery.
7. It is normal that the flight time will be shortened when the ambient temperature is lower than 10℃.
8. The battery surface should be cleaned in time after the operation, in order

- to avoid agrochemical corrosion.
9. The drone is strictly forbidden to be used in the environment of strong static electricity, magnetic field or high voltage power line.
 10. It is strictly prohibited to pierce the battery case with nails or other sharp objects, or to hammer or step on the battery.
 11. If the electrolyte enters eyes after the battery leaks, rinse the electrolyte out instead of rubbing the eye. Seek medical help immediately. Eyes will be injured if not treated in time.
 12. Non professionals are forbidden to remove the battery.
 13. Keep the battery away from fire source during use.

1.2. Charger Introduction

ZAC6160-01 intelligent charger can recognize smart batteries automatically. The specially developed intelligent charging mode can dynamically adjust the best charging strategy according to the health state of the battery, so as to achieve the best charging effect of safe and fast charging, and achieve the best operating and storage state of the battery, thus extending the battery life.

1.2.1. Components

The definition of the charger components is shown in Figure 1-10.

Figure 1-10 Charger Components

- | | | | |
|------------------------|-------------------------|--------------------------|--------------------|
| 1. Power on/off button | 2. Charger Upgrade Port | 3. Battery charging port | 4. Power Indicator |
| 5. Charge indicator | 6. AC input port | | |

1.2.2. Function Description

1.2.2.1. Status Indicator LED Description

1) Activation Indicator Description

The charger needs to be activated at the first usage. After the charger is

connected to the drone via USB, please activate it according to the APP guidance.

Status	Prompt	Battery channel status indicator	Alarm indicator	Operating indicator
Deactivated	/	Solid White	Solid White	FLASH
Activated	/	OFF	OFF	FLASH

2) Self-check

First, make sure that all the terminals are correctly connected, then press the “start/stop” button on the operational panel. The battery charging status indicator and alarm indicator will turn white. The charger will complete the self-check with a beep sound at the end.

3) Charging Logic

The charger will charge one battery at a time, according to the remaining capacity from high to low.

4) Description of the Battery Charging Status Indicator

“●” Solid On “□” Flash “○” OFF

LED	Function	Notes
LED 4	Power Indicator	Green solid on“●”: power input normal OFF“○”: no power input
LED 5	Power Indicator	Green solid on“●”: Fully charged; Green flash“□”: Charging Yellow flash“□”: Battery identification in progress/waiting for charging Red solid on“●”: Charging port short circuit Red flash“□”: Battery removal or charging failure OFF“○”: No battery connected 无电池接入

1.2.3. Charge Steps

Step 1: Insert the power cable to the charger's power port. As shown in figure 1-11.

Figure 1-2

Step 2: Connect the charger: connect the charger adapter cable to the charger charging port. As shown in figure 1-12.

Figure 1-3

Step 3: After making sure that all wires are connected correctly, press the “Start/Stop” button in the operation panel, and the charger will start self-check. The battery will start charging after the self-check.

Step 4: Press the "Start/Stop" button in the operation panel to turn off the battery after charging, unplug the AC power cable, and unplug the battery. Please follow the rules below.

Charging Mode	Battery State	Channel Indicator State	Plug or Unplug Battery Instruction
	Fully charged	Solid green	Unplug battery directly
	Charger self-check	Yellow flash	Do not unplug directly
	Charging	Green flash	If plugging or unplugging is needed, please press the start/stop button first. Plugging or unplugging directly is prohibited

Notes:

1. Make sure the charger is grounded before use.
2. Do not use the product in direct sunlight, high humidity, high temperature, dust, vibration or thunder/lightening.
3. Products should be kept away from dangerous substances such as high pressure, heat source, corrosive agent, flammable gas, etc., and must be used at appropriate ambient temperature (5-45℃ is recommended).
4. Products should be placed in a stable horizontal position, and good

- ventilation and heat dissipation conditions should be ensured when working.
5. When charging, please strictly follow the battery safety instructions and cautions.
 6. Before connection, please ensure that all ports and input lines of modules and batteries have no obvious defects such as blockage, damage, breakage or short circuit.
 7. Before use, please ensure that the power supply line has enough capacity to avoid overheating or even fire caused by insufficient capacity, especially when two or more pieces of equipment are used at the same time.
 8. Do not pull out the input wire when the charger is working. Pull out the battery in time after charging.
 9. Make sure the battery is well connected before charging.
 10. This charger is only applicable to the battery of this drone. If the user uses the charger for purposes other than those listed in the manual, the Company shall not assume any responsibility.
 11. Do not leave the charger unattended when it's working. If any function is not normal, please stop charging immediately.
 12. In case of fire, do not use liquid extinguisher to avoid electric shock. Use dry powder extinguisher correctly.

1.2.1. Specification Parameters

Subject	Parameter
Input	AC 100-290V 50/60Hz
Rated Input Voltage	AC 220V/ 50~60Hz
Output Power	max 3600W
Output Voltage	max 60.9V
Charging Current	max 60A (Adjustable)
Operating Temperature	-25℃~60℃ (derating to 50% of rated load above 50℃)
Storage Temperature	-40℃ ~ 70℃
Storage Humidity	5%~95% (Relative humidity)
Voltage Detection	Support
Protection	Over-current protection Over-voltage protection Short circuit protection Reverse connection protection Start delay Turn-off delay
Weight	5.6kg
Dimension	278*137*198mm

1.2.2. Drone Introduction

Drone components are shown in the figure below.

Figure 1-7

Notes:

The propellers on arm 1 and arm 3 rotate counterclockwise, while on arm 2 and arm 4 rotate clockwise. See Figure 1-16.

1.2.3. Preparation

1.2.3.1. Unfold Arms

Step 1: Take 3WWDZ-15A plant protection drone out of the box.

Step 2: Horizontally rotate the propellers to remove them from the holder.

Step 3: Unfold the arms. See Figure 1-17.

Figure 1-8 Arm Unfolding Progress

Step 4: Tighten the arm sleeves as shown in Figure 1-18.

Figure 1-9 Tighten Arm Sleeves

Step 5: Unfold the propellers to 180°, as shown in Figure 1-19.

Figure 1-10 Unfold the Propellers

Notes:

The arm sleeves is a pinch point. Be careful with your hands.

1.2.4. Install Battery

Be sure to use the official battery and check the battery level before flying.

Step 1: Place the battery vertically down in the battery rail on the rear side of the drone body.

Step 2: Connect the battery output port to the body, and the battery is locked in when you hear a “click”. See Figure 1-20.

Figure 1-11 Install the battery

1.2.5. Equipment Calibration

1.2.5.1. Compass Calibration

Method 1: Access the calibration function via APP installed on the RC:

Step 1: Pull down the throttle.

Step 2: Quickly toggle down "Flight Mode Switch" to the down position ("S") and toggle it up to the up position ("G") for about 6-10 cycles until the status indicator light flashes blue.

Step 3: Place the drone head forward and keep the drone level with the ground. Slowly rotate the drone clockwise for at least one circle. If the status indicator flashes green, process to step 4. If the status indicator is solid green, the calibration is completed.

Step 4: Lift the drone horizontally for more than 45° to the ground. Slowly rotate the drone clockwise for at least one circle until the status indicator shows solid green for 4s. The calibration is completed.

Step 5: Calibration fails if the status indicator shows solid red for 4s. Repeat Step 2-4 until the operation succeeds. See Figure 1-4-7.

Figure 1-4-7 Compass Calibration

Method 2: Enter the calibration function via APP:

Step 1: Click  on the right top in the APP to enter the Setting interface, and click  into Flight Setting.

Step 2: Click  to enter the magnetic compass calibration interface. Click to start the calibration, and the drone navigation light flashes blue.

Step 3: Repeat the Step 3-5 in Method 1.

Notes:

1. Before calibration, the propellers on the drone should be removed.

2. Do not calibrate it in areas with strong magnetic fields, such as magnetic mines, parking lots, building areas with underground steel reinforcement, etc.
3. During the calibration, do not carry ferromagnetic materials, such as keys, mobile phones, etc.
4. Do not calibrate the compass indoors.

1.2.5.2. Flowmeter Calibration

Flowmeter calibration must be performed when the drone is used for spraying for the first time, otherwise, the operation effect will be affected.

Preparation before calibration : Press “” button to start the pump when the drone is on the ground to discharge the air from the pipeline.

Step 1: Add about 5000ml liquid into the tank.

Step 2: Enter the Setting interface, and click “Flowmeter Calibration”.

Step 3: Plan a regular-shaped field, no less than 0.34 hectares. The length Level”.

Step 4: Upload the flight route, and start the operation until the liquid runs out and the breakpoint is recorded.

Step 5: After the drone returns, the APP will pop up the dialog box of “Sprayed Volume”.

Step 6: Input “5000ml” in the “Spray Volume” dialog box.

Step 7: The calibration is completed.

Notes:

1. Re-calibrate after replacing with different nozzles.
2. Re-calibrate after replacing agrochemical with different viscosity.
3. Re-calibrate if the error between the actual operation area and theoretical operation area is more than 10%.

2. Flight

2.1. Flight Instructions

According to the regulations of the International Civil Aviation Organization (ICAO) and national air traffic control on airspace control and the regulation of drones, drones must fly in the prescribed airspace. For flight safety, the flight restriction function (including altitude and distance restrictions and no-fly area) is enabled by default to help users to use the product safely and legally. When GNSS is available, the no-fly area affects the flight together with altitude

and distance restriction. The drone flyable airspace is the intersection of restricted airspace. Without GNSS, the drone flight height is not limited by Agriculture Assistant APP.

2.1.1. Altitude and Distance Restriction

Height limit is used to limit the flight height of a drone and maximum radius is used to limit the flight distance of an aircraft. The maximum flying altitude of the drone on delivery is 20 meters. See Figure 2-1.

Figure 2-1 Altitude and Distance Restriction

GNSS State	Flight Mode	Flight Limit		Notification
With GNSS	POSITION mode and autonomous mode	Max Altitude	20m	Warning
		Max Radius	9999m	Warning
	Attitude mode	Max Altitude	20m	Automatically switch to POSITION mode with warning
		Max Radius	9999m	Automatically switch to POSITION mode with warning
Without GNSS	Attitude mode	Max Altitude	No limit	No warning
		Max Radius	No limit	No warning

2.1.2. No-Fly Zone and Restricted Area

2.1.2.1. No-Fly Zone

The area includes airport restricted flight areas and special flight restricted areas. For more details, please refer to special flight restricted areas defined by

local authorities.

2.1.2.2. Restricted Area (when GNSS is available)

Areas are temporary restricted for flying due to emergencies (such as forest fires, large-scale events, etc.). The restricted area can be a circle or a polygon. The drone is not allowed to fly within the no-fly zone. See Figure 2-2.

Figure 2-2

GNSS signal is normal		
Area	Special Area with Flight Restriction	Status Indicator Light for the Drone
No-fly Zone	The motors can not be activated.	Red light solid on for 5s and off in 1s
	If the drone flies without GNSS, it will land automatically immediately after GNSS is available, and the motor stops automatically after landing.	
Close to No-fly Zone	Distance to the no-fly zone <120m. The drone flight speed will slow down with flashing lights and alarming.	Red light solid on for 5s and off in 1s
Fly Zone	The drone can fly normally. No flight restrictions.	No Warning

Notes:

For flight safety, please try to avoid airports, highways, railway stations, subway stations or urban areas. If users need to fly in such areas, prepare relevant materials and apply for temporary airspace to local authorities. Then contact the after-sales service to release the restriction.

2.2. Indicator Description

On the first test flight, it is recommended to understand the meaning of the flight status indicators to ensure a safe flight.

No.	Status	Content	Indicator Display
1	Normal	Power on Self-check is completed POSITION satellite searching	Flash yellow for twice
2		Preparation is completed; waiting for take-off	Solid yellow
3		Taking-off and flying	Head direction, solid red; Opposite head direction, solid green
4		Mode switch	Flash green for 5s
5		Magnetic compass calibration (Horizontal)	The indicator flashes yellow twice per second
6		Magnetic compass calibration (Vertical)	The indicator flashes green twice per second
7		Magnetic compass calibration succeeds	Solid green for 4s
8	Abnormal	Magnetic compass calibration failure	Solid red for 4s
9		Self-check Failed	Solid red
10		Low Voltage/Volume Level I	Flash red slowly
11		Low Voltage/Volume Level II	Solid red
12		IMU failure	Solid red
13		Barometer failure	Solid red
14		POSITION failure	Solid red
15		Independent magnetic compass failure	Solid red
16		Motor failure	Solid red
17		RC lose control	Solid red

2.3. Operation Description

2.3.1. Pre-flight Inspection

Please check the following points to avoid flight accidents.

1. Place the drone in the open operation area and the user should face the tail.
2. Make sure that the battery of the drone is installed properly.
3. Before flying, it is necessary to turn on the remote controller before plugging in the battery of the drone.
4. Ensure the battery of the drone and the remote controller are adequately charged, also the agrochemical required for spraying is sufficient.
5. Make sure that the motors and propellers rotate in the correct direction and the structure is stable. All arms and propellers of the drone have been fully extended, and the arm sleeves have been tightened.
6. Make sure that the spraying pipes are free of blockage and leakage, and the nozzles can spray water normally. If there is no liquid sprayed out during spraying test, please turn on the pressure relief valve on the side of the nozzles manually. After discharging the air, turn off the pressure relief valve, and the nozzles can be used for operation.

2.3.1. Lock and Unlock

2.3.1.1. Unlock

The unlocking operation is shown in Figure 2-3. When you unlock the drone, the motors rotate in the sequence of No. 1, No. 2, No. 3 and No. 4. When motor No. 1 starts, push the throttle slightly up and all the motors will start at the same time.

Figure 2-3 Unlock

2.3.1.2. Lock

The drone supports two active locking methods:

- Perform the operation shown in Figure 2-4 to lock.
- After the drone lands, the throttle stick should be kept at the down position for at least 3s, and then the drone will be locked automatically.

Figure 2-4 Lock

2.3.2. Take Off and Land

2.3.2.1. Take Off

Step 1: Click on “” and then long press “” for 2s to turn on the remote controller.

Step 2: Turn on the power supply of the drone.

Step 3: The pilot should keep a distance from the drone of more than 10m. Enter the operation interface of the Agriculture Assistant APP to ensure that the signal of GNSS is good, and the status indicator light of the drone is not showing red, which means there's no warning.

Step 4: Perform the unlock action, the drone motors will start one by one, then slowly push up the throttle stick to take off.

Step 5: The drone remains at its current altitude and hovers after the throttle lever is centered, as shown in Figure 2-5.

Figure 2-5 Unlock and Hover

2.3.2.2. Land

Step 1: Slowly pull down the throttle stick, and the drone lands on the ground.

Step 2: After the drone lands, place the throttle stick to the down position, and then perform the locking action as shown in Figure 2-6.

Figure 2-6 Land and Lock

Notes:

1. For the first test flight, the flight altitude shall not exceed 4m.
2. Do not fly beyond the visual range for the first test flight.
3. If there is light flashing showing an alert or there is a warning on the interface of the Agriculture Assistant APP during the flight, please land immediately and check the drone according to the plant protection assistant warning information.

2.3.3. POSITION Operating Mode

2.3.3.1. Mode Introduction

POSITION operation mode has the features of being easy-to-use and quick-to-start, which is suitable for the operation in small, irregular and complex fields. In POSITION mode, the maximum flying speed of the drone is 10m/s. The spraying speed of the liquid is related to the flying speed. The faster the drone flies, the greater the flow rate is. When the drone hovers, the flow shuts down automatically.

2.3.3.2. Operating Procedure

Step 1: Before taking off, click “” button to start the testing spray, to check if there is air in the pipeline.

Step 2: The drone takes off and flies to the field for operation.

Step 3: Press the spray button “”, and fly the drone to the field and start the operation.

Notes:

During the operation, make sure that the drone is in the visual range.

2.3.4. AB Point Mode

2.3.4.1. Mode Introduction

AB point operation mode is suitable for use in the regular area. It has fewer operation steps. In the AB point operation mode, the drone can operate automatically after Point A and Point B are recorded. The spray will turn off automatically when the drone changes lines.

The flight route for AB point operation mode is shown in Figure 2-7. The dotted line length is the line spacing, which can be set in Agriculture Assistant APP according to the working conditions.

Figure 2-7 AB Point Operation Route

2.3.4.2. Operating Procedure

Step 1: After the drone taking off, fly the drone to point A of the operating field, and click the “A” Button. The Agriculture Assistant APP will send a voice notification of “Point A is recorded successfully”.

Step 2: Fly the drone to the B point of the operating field, and click the “B” Button. The Agriculture Assistant APP will send a voice notification of “Point B is recorded successfully”.

Step 3: Click the “AB” Button. The Agriculture Assistant APP will send a voice notification of “AB Point Mode”.

Step 4: Toggle the RC stick to the left/right to fly the drone in the direction of the next line and then the drone will perform according to the planned route.

2.3.4.3. Exit AB Point Mode

The drone can exit AB point by the following methods:

1. No liquid is remained, and breakpoint has been generated.
2. Enter Automatic Obstacle Avoidance Hover Mode.
3. Manual emergency brake the drone. The drone will record the breakpoint and hover.
4. During the operation in AB Point Mode, click the “AB” button on the RC (blue light is off) and the drone will exit the AB point operation mode and hover. If the user clicks the “AB” button on the RC again, the drone will fly directly to the breakpoint or projection point and continue the operation. (Returning to the breakpoint or projection point can be set in the Agriculture Assistant APP).

Notes:

1. During the operation, it is necessary to ensure that the drone is within the visual range.

2. AB points can be recorded when the GNSS signal is strong and there is no breakpoint.
3. The distance between "A" and "B" point should be no less than 10m.
4. During operation, the flight altitude can be adjusted by the RC to meet the actual need. When the throttle is in the central position, the drone will maintain its current altitude.

2.3.5. Autonomous Mode

2.3.5.1. Introduction

Users can survey the field and mark the obstacle, and set the border point using the field surveying function of the Agriculture Assistant APP. The Agriculture Assistant APP will calculate and generate the best route. This mode is suitable for large or irregular fields. The operation route of fully autonomous operation mode is shown in Figure 2-8. The dotted line shows the line spacing. It can be set in the Agriculture Assistant APP.

Figure 2-8 Auto Operation Route

2.3.5.2. Field Surveying Steps

Step 1: Run the Agriculture Assistant APP and there will be three options (POSITION mapping mode, drone mapping mode and RTK hand-held marker mapping mode), you can choose according to the actual situation.

Step 2: Set a name for the field.

Step 3: Mark the border points: select the points at each corner of the borderline.

Step 4: Mark the obstacle: if there are obstacles in the field, click the obstacle point and select the shape. Click on the turning points of the obstacle shape to set it as an obstacle point, and then click "OK" after the obstacle points setting is completed.

Step 5: Calibration point settings: after editing the operation area, calibration points need to be added. Calibration points are used for map rectification. When setting calibration points, make sure the reference object is easy to identify; the surrounding area is clear and suitable for the drone to take off. The operation area setting is completed when the calibration point is set.

2.3.5.3. Autonomous Operation Steps

Step 1: After the Agriculture Assistant APP is connected to the drone, click to expand the land/task list in the main interface.

Step 2: Select a field (or a field in the task list) and click to use the field.

Step 3: Place the drone at the calibration point of the operation area, click on "Calibrate", then click "Calibrate Drone Position".

Step 4: After the field is chosen, set the following parameters one by one: route angle, turning mode, route inner contraction, obstacle point spacing, altitude, usage per mu, ways of bypassing obstacle area.

Step 5: According to the route condition, select the routes ready to be sprayed (all routes are selected by default).

Step 6: Click "Start Operation" on the operation interface.

Step 7: Slide to unlock (please set the RTH height and take off height), and the drone will take off automatically and execute the planned route.

Step 8: Complete the operation (also can be finished manually during operation) and then generate the operation report.

Notes:

1. During the operation, it is necessary to ensure that the drone is in the visual range.
2. During the operation, the throttle stick of the RC can be toggled to adjust the flight altitude according to the plant condition. When the throttle stick is in the central position, the drone will resume its setting altitude.
3. For more detailed operation, please refer to the " User Manual of the Agriculture Assistant APP ".

2.4. Function Introduction

2.4.1. Remaining Liquid

2.4.1.1. Introduction

3WWDZ-15A is equipped with a real-time level meter, which can detect the remaining liquid in real-time and display it in percentage to the users, as shown in the figure below. During operation, breakpoints can be selected by combining the remaining liquid and route length. This can reduce the time when drone is

flying to the breakpoint and not operating, which will improve the operation efficiency.

Figure 2-9

2.4.2. Resume at the breakpoint

2.4.2.1. Introduction

If the breakpoint is recorded during the operation due to running out of agrochemical, low battery, manual braking, obstacle avoidance, etc., the drone can be set to resume operation at the breakpoint following the established route.

2.4.2.2. Record the breakpoint

During the operation, the drone will record the breakpoint and resume the operation at the breakpoint in the following situations:

1. Insufficient liquid in the tank.
2. When the low voltage protection function is enabled and the Level II warning is triggered.
3. Pitch or roll stick on the RC is pulled/pushed.
4. When the drone enters the RTH mode.
5. When the drone has obstacle avoidance and has detected the obstacle, which leads to an automatic brake.
6. When the location signal or heading signal is weak, the drone will automatically exit the operation mode and enter the protection mode, and record the current coordinate as the breakpoint.

Notes:

1. Any condition above is met, the drone will update the breakpoint.
2. The following actions can be set for the drone according to the operating environment after no remaining liquid: hover, raise 2m and hover, RTH and no action.

2.4.2.3. Return to the breakpoint

The steps for returning to the breakpoint are as follows:

Step 1: Hover the drone manually in any open place and ensure there is no obstacle between this position and the breakpoint.

Step 2: Click "Return to the breakpoint " (click the AB Button or return to the Projection Point) in the Agriculture Assistant APP.

Step 3: The drone automatically rises or descends to the operating altitude and returns to the breakpoint.

Step 4: Resume the set route and continue the operation.

Notes:

For more detailed operation, please refer to the " User Manual of Agriculture Assistant APP".

2.4.2.4. Return to the Projection Point

If there is any obstacle on the way back to the breakpoint, you can choose "Projection Point" to return to avoid the obstacle.

Step 1: After the operation is paused, you can fly the drone manually to bypass the obstacle.

Step 2: Click "Continue" on the bottom right corner and select "Return to the Projection Point". Three options corresponding to No. 1, 2, and 3 points are marked in the route.

Figure 2-10

Step 3: Click on one of the points, and the drone will fly to the point to continue the operation.

2.4.3. Low Battery Level Protection

The drone has a low battery level protection function. The user can set the warning threshold, which is the battery level in percentage in the Agriculture Assistant APP. When the value is reached, the drone will act according to the setting. The action can be set as: hover, land, return, no action (warning prompt only).

2.4.3.1. Level I Protection

As the Level I protection, the drone indicators flash red. The protection will be triggered after the indicators flash for 10s. The factory default Level I low power threshold is 30%, and the protective action is "no action". At the same time, the Agriculture Assistant APP sends voice notification "Level I Low Battery".

2.4.3.2. Level II Protection

As the Level II protection, the drone indicators flash red. The protection will be triggered after the indicators flash for 10s. The factory default Level II low power threshold is 10%, and the protective action is "auto-landing". At the same time, the Agriculture Assistant APP sends voice notification "Level II Low Battery".

Notes:

1. When Level I warning occurs, fly the drone to the safe area and land as soon as possible.
2. It is necessary to avoid the Level II warning as much as possible to avoid

accidents.

3. After the low battery protection action is triggered, the drone can only be switched to attitude mode or RTH mode.
4. When the drone lands automatically, the protection mode can be quitted by switching to attitude mode.

2.4.4. Lost Control Protection

2.4.4.1. Overview of Return to Home (RTH)

When the POSITION signal reaches the seven satellites for the first time during taking-off or flight and the signal quality is good, the drone will record the current location as the RTH point. The process of the drone returning automatically to the RTH point is called RTH.

2.4.4.2. Protection Logic

When the drone is in good GNSS signal, the compass work normally, and the RTH point has been successfully recorded. If the RC signal is lost for any reason during the operation, the protection action will be triggered. The protection actions include landing, hovering and RTH.

Notes:

1. When the RC is well connected, RTH can be canceled by toggling the RC switch to "S", and the drone can be controlled manually.
2. When the RC is well connected, RTH can be canceled by long-pressing the  button for 2s.

2.4.5. RTK Function

2.4.5.1. Introduction

RTK can achieve centimeter-level positioning accuracy to improve the accuracy and reliability of agricultural plant protection. When RTK is activated and the GNSS signal is good, the drone will start the dual antenna direction finding function, which not only has high directional accuracy but also serve as a double backup with the magnetic compass orientation function.

2.4.5.2. RTK Airborne Terminal Setting

RTK services can be obtained by:

Step 1: Set the base station to base station mode according to 2.4.7.3.

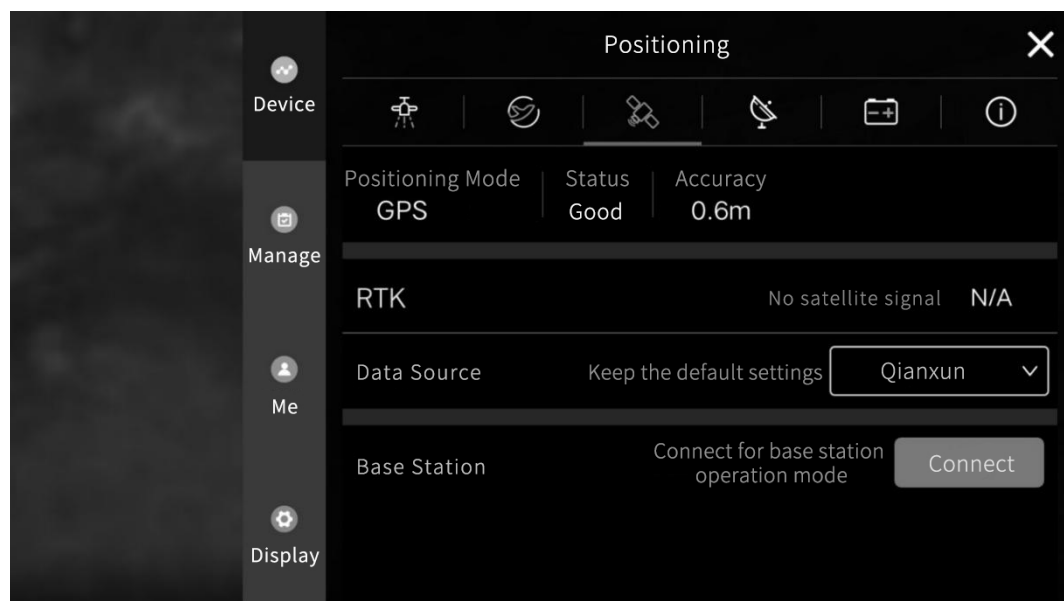

Step 2: Click on the satellite status in the top menu bar of the main interface to enter the RTK setup interface.

Step 3: Set the data source to "Datalink". After connecting to the base station successfully, you can view the RTK status. Wait for the display to show "Fixed Solution" and then you can start the operation.

2.4.5.3. RTK Base Station Setting

Step 1: Turn on the base station and wait until RTK is connecting to the satellites.

Step 2: Click the satellite status in the top bar of the main interface to enter the RTK setting interface.

Step 3: Click the connection button in the status bar of the base station and select the USB address of the corresponding RTK base station.

Step 4: After successful connection, click the configuration button to choose either of the following two modes:

- A. Marking mode: accurately map of the plot;
- B. Base station mode: provide precise positioning service for the drone in operation.

Step 5: After selecting the mode, the RTK system can work normally when "Fixed" is displayed.

Notes :

1. Please make sure the base station is level to the ground when setting it up and make sure that the location is higher than the plants in the operating area.
2. Do not move the base station when the drone is in operation.
3. To ensure the signal quality, it is suggested that the antenna of the base station point to the sky and keep perpendicular to the ground.
4. To ensure the communication quality between the base station and the drone, there must be no obstruction between them.

3. Maintenance and Common Troubleshooting

3.1. Drone Maintenance & Precaution

1. Delicate electronic components are inside the drone. Do not soak the drone in water when cleaning.
2. Regular inspection of components is required. Make sure the screws are fastened at all the joints.
3. During transportation, make sure to properly fold the arms so that the motor base is placed on the folding structure.
4. If the structural parts (such as frames, arms, landing gears) are damaged, please contact the after-sales service for replacement.

3.2. Motor Maintenance & Precaution

The working environment of agricultural plant protection drones' motor is harsh. Water mist, liquid and agrochemical residue are the main factors causing damage. Therefore, it is necessary to:

1. Clean the housing of the motor with a warm cloth after the operation. Remove the residue on the surface, and do not flush the inside of the motor with high-pressure water. Prevent water from leaking into the motor, which will shorten the service life.
2. Check the motor regularly. When the resistance of the motor is high, the sound is abnormal or the gap between the motor and the motor base becomes large, please contact after-sales immediately and maintain according to the instructions by the after-sales.

3.3. Propeller Maintenance & Precaution

1. If the propeller cracks or is damaged, please replace it in time. Otherwise, it will not have enough lifting power and the drone will be unstable, which will cause safety problems.
2. Pay attention to the marking on the propellers when installing them. Motor No.1 and No.3 should match "CCW" propellers, and motor No.2 and No.4 should match "CW" propellers.
3. Clean up agrochemical residues after finishing the operation.

4. Insert the propeller into the propeller holder during transportation.

3.4. Battery Maintenance & Precaution

3.4.1. UPS

3.4.1.1. Specification Parameters

No.	Project	Specification Parameters
1	Cell Type	Rechargeable Lithium-Ion Battery
2	Individual Cell Voltage	3.7V
3	Capacity	2500mAh
4	Discharge	-20℃~55℃
5	Charge	0℃~45℃
6	Storage (Within 3 Months)	-5℃~35℃

3.4.1.2. Notes

1. When the agricultural drone is not used for a period of time, please connect the drone to the battery once a month for no less than 20min, in order to prevent the battery from discharging.
2. Do not disassemble the battery.
3. It is strictly forbidden to throw the battery into the fire, otherwise, it may explode.
4. Batteries should not be immersed in liquids such as freshwater, seawater, beverages, etc.
5. Using damaged batteries are prohibited.

3.4.2. Battery

1. Charge in the slow charging mode regularly to balance the battery voltage.
2. Avoid charging at a temperature of above 45℃.
3. If the battery falls from height, it might cause a short circuit or even combustion.
4. Make sure the battery is firmly connected to the drone, otherwise it may affect the performance of the drone.
5. If corrosion or discoloration is found in the battery plug of the drone, wipe it with absolute alcohol in time and contact the after-sales department and follow the instructions.
6. Do not use batteries which have dents, scratches and deformation on the surface. Serious mechanical damage may lead to the risk of short circuits

or combustion.

7. Make sure all wires are not damaged. Severely damaged wires may cause short circuits or combustion.

Storage Instructions:

1. For storage of a large number of batteries, it is recommended to keep 30cm between each storage unit.
2. Please avoid direct sunlight for more than 10min under any storage condition.
3. Battery storage environment should be maintained at room temperature (15°C ~35°C). Long-term storage above 35°C will accelerate the aging of the battery. Long-term storage at 0°C~15°C may shorten the service time, but after several times of use at room temperature, the normal condition can be restored.
4. Battery storage should avoid a humid environment. Keep storage environment dry and not ventilated.
5. Battery storage locations should not be places where large items are often moved in and out to prevent accidental collisions.

Transportation Instruction:

1. It is recommended to use a temperature-resistant or flame-retardant box with a cover to store batteries. It is recommended to use the shockproof and tilt-proof sponge in the original box in other packages.
2. Avoid putting the charging and discharging cables on the edge of the box to prevent accidentally being crushed, otherwise, it will lead to a short circuit when being used.
3. During the operation, if the batteries are placed in a vehicle, ventilation should be guaranteed and avoid direct sunlight. The place exposed to direct sunlight in a sealed vehicle may have a temperature of above 80℃, which may cause the battery to burn.

Emergency Instructions:

Adequate sand, fire extinguishers, and heat-insulating gloves should be provided in places where batteries are stored, transported, or used.

When smoking and burning of batteries are found, the following measures should be taken immediately:

1. Battery is just starting to smoke (or has a burnt odor): Determine the part where a short circuit happens immediately. Lift the battery handle or charge-discharge cable (with heat-insulating gloves if necessary) and quickly drag the battery into the open room or outdoor. Completely bury

the whole battery with sand (the charge-discharge cable needs to be buried in if there is smoking). Be careful to wait until the battery has completely cooled down before taking it out (otherwise the battery may continue to smoke).

2. Batteries emit heavy smoke: immediately use sand and fire extinguishers to extinguish or bury the burning batteries while relocate the surrounding batteries and other flammable objects. If the surrounding flammable and explosive objects (liquids) cannot be removed, immediately use large quantities of water for rapid fire extinguishing and cooling.
3. Batteries are on fire: immediately use a large amount of water, fire extinguishers and sands to extinguish the fire (disconnect the power supply of surrounding electrical equipment first) while removing the surrounding batteries and other flammable material.

Notes:

When using fire fighting equipment to extinguish fire, strictly follow the requirements and specifications of the local Fire Fighting authorities.

3.5. Plug Maintenance & Considerations

1. The plug must be inserted completely when it is connected, otherwise, it will heat the plug and affect flight.
2. The power plug and battery plug should be replaced if they have turned black or sparked.

3.6. Spray System Maintenance & Considerations

1. Fill the water tank, pipe and nozzle with clean water to clean them when the operation is finished.
2. Avoid mixing herbicides and pesticides, otherwise, it will be harmful to plants.
3. In the case of long-term storage or transportation of the drone, always empty the tank.
4. It is forbidden to run the water pump at high speed on an empty tank for long time.
5. Avoid using powders and high-concentration emulsifiers to avoid blocking the spray pipe.

4. Transportation Instructions

Packaging method:

The drone will be placed in the package box with flexible supporting material embedded in the package box while shipping.

Package size: 863*903*603mm as shown below.

Figure 4-1

5. Hazards and Safety Checklist and Countermeasures

No.	Hazard	Countermeasures
1	Foldable Structure	When folding or unfolding the drone, be aware of the hand pinch hazard sign and keep your fingers away from the folding structure.
2	High-speed Rotating Propeller	Keep a safe distance from the drone and keep it away from people, animals or other obstacles during operation.
3	Charger While Being Charged	Place in a dedicated charging area and environment. Ensure good ventilation. When the charger is connected to power, make sure the charger is grounded.
4	Tank	Flush it with clean water after use and cover it with the lid, and store in a safe place.
5	Battery	The maximum voltage is up to 51.8V. Please use in strict accordance with the relevant safety regulations and the instructions of the battery, and pay attention to safety.
6	Agrochemical	When handling agrochemical, pay attention to the risk of different kinds of agrochemical. Fully understand the

		using methods in advance.
7	During the Operation	Do not operate in bad weather, such as strong wind (wind speed 8m/s or above), heavy rain (rainfall 25 mm/12 hours or above), snow, fog, etc.

6. Manufacturer Information

Manufacturer: Topxgun (Nanjing) Robotics Co., Ltd.

Add.: No.8 Building, Jiyun Building, Jiangsu Software Park, No.1 Dongji Avenue, Jiangning District, Nanjing, China

Tel.: 025-83798727

Website: en.topxgun.com

7. Appendix

7.1. Specification Parameters

Specification	Parameter
Package	
Package Size	863*903*603mm
Net Weight	15.2kg
Gross Weight	
Body Frame	
Symmetrical Wheelbase	Motor 1762mm
Arm Length	582mm
Spraying Mode	
Dimension (Folded State)	960*860*550mm
Dimension (Unfolded State)	2090*1355*550mm (With unfolded propellers)
Dimension (Unfolded State)	1355*1305*550mm (Without propellers and nozzle, antenna included)
Power Motor	
Model	T80
Stator Dimensions	80x20mm
KV	100rpm/V

Power	1350W (1 motor)
Maximum Thrust	16.5kg (1 motor)
Weight	655g
Number of motors	4
Power ESC	
Rated Working Current	40A
Operating Voltage	50.4V (14S LiPo)
Maximum Signal Frequency	500Hz
Drive PWM Frequency	20kHz
Foldable Propeller	
Material	Polymer + Carbon fiber
Diameter	34 inch
Pitch	12.8 inch
Weight	278g
Spraying System	
Tank	
Maximum Capacity	15.5L
Rated Capacity	15L
Weight	2.2kg (Including liquid level sensor and other accessories)
Pump	
Pump Type	Diaphragm pump
Max Flow Rate	5.0L (1 pump)
Operating Pressure	0.2~0.4Mpa
Nozzles	
Recommended Model	110015VS
Quantity	8 个
Arm Length	1548mm
Maximum Spray Flow Rate	5400ml/min (110015VS nozzle, use water as an example)
Spray Range	4.0~7.0m (Depending on the plant)

Recommended Spray Range	6m (Operating height: 3m)
Atomization	110015VS : 170 - 265 μ m (Related to spraying preparation type, spraying flow rate, etc.)
System	
FPV Camera	
FOV	Horizontal 140°, vertical 87°
Resolution Ratio	720P
Auxiliary Light Brightness	15lux@5m Directly
Flight Parameter	
Drone Weight (With Battery)	23kg
Rated Take Off Weight	38kg
Maximum Take Off Weight	38kg
Hover Precision (GNSS signal properly)	Horizontal ± 1.0 m, vertical ± 0.5 m
	Horizontal ± 10 cm, vertical ± 10 cm (RTK enabled)
	Vertical ± 0.1 m (enabled)
Hover Time*	≥ 8 min (Take-off weight 38kg & 20Ah battery)
	≥ 15 min (Take-off weight 38kg & 20Ah battery)
* The hover time is measured near sea level, when the wind speed is less than 3m/s, and the ambient temperature is 25°C.	
Maximum Flight Speed	10m/s
Distance Limit	1000m
Maximum Take-off Altitude	2000m
Recommended Operating Ambient Temperature	0~40℃
Flight Control System	
Model	TIA2023
Input Voltage	30~60.9V
Rated Power	20W
Working Temperature	-10℃~60℃
Interface Type	CANBus, RS485, PWM, USB, etc.
Supported Multi-rotor Aircraft Types	Four rotors, six rotors, eight rotors (configurable)
Protective Function	Low voltage protection, lost control protection, no-fly zone protection, etc.

Supported Languages	Simplified Chinese/English
Handhold RTK Mapping Kit (Optional)	
Measurement Accuracy	Point positioning: 2.0m CEP DGNSS: 0.5m CEP RTK: 2cm+1ppm (horizontal) CEP
Charge Time	≤4h
Duration	Work individually: 8h Work with data transmission: 4h
Battery Capacity	3000mAh
Waterproof Level	IP65
Size	70*70*50mm
Weight	300g
Charger (ZAC6160-01)	
Input Power	AC 100V~290V
Input Voltage Frequency	50/60Hz
Output Power	60.9V (Max)
Output Current	60A (Max)
Output Power	3600W (Max)
Channel	1 Channel
Supported Language	Simplified Chinese
Net Weight	5.6kg
Gross Weight	
Size	278*137*198mm
Package Size	
Battery (ZAB1420-01)	
Voltage	53.2V
Capacity	20000mAh
Discharge Rate	8C
Charge Rate	4C
Waterproof Level	IP56 (when is is installed on the drone)
Battery Life Time	650 cycles (Capacity will be attenuated, no limit to use)
Weight	7.8Kg

Size	139*240*316mm
Package Size	

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum 20cm distance between the radiator and your body: Use only the supplied antenna.
