功放

RGB

The circuit diagram illustrates an RGB LED driver. It features a MOSFET (Q1, 2301) and a BJT (Q2, 9014) for current limiting. A CS5008 LED driver IC (U3) is used to drive four 0807RGB LEDs (LED1, LED2, LED3, LED4). The circuit is powered by BAT+ and includes various resistors (R5, R6, R12) and capacitors (C23, C24, C25).
