Note: In the process of antenna design, the spring antenna is required to determine the position of the product, the Angle, the structure of the product, the product, the position of the input and output interface, and the position of the interference source inside the product. The π -type network is reserved to match the antenna. When debugging the antenna, please provide the whole product shell and the internal pcba function board, and calculate the external interference source and parasitic capacitance into the match, so that the antenna can achieve the best performance index and working efficiency. The left image shows the side view, and the right image shows the top view. The pcb routing of the matching network is 0.5mm line width, and 0.35mm spacing is laid on both sides of the network to maintain good impedance characteristics.

六、环境性能测试 Environmental performance test

项目	测试条件test condition	规格specifications
储存环境	The test temperature, humidity and air pressure are as follows: 1. The temperature is-30℃ ~80℃ 2. Relative humidity is 45% -85% 3. Air pressure is 86 kpa-106 kpa	PASS
	Five cycles were performed between 70°C and 40 and then checked for 1-2h under normal conditions. 。	PASS
剛但定從热试验 Constant humidity and heat trial	Relative humidity: $95\pm3\%$, test temperature: 40 °C. After a continuous 2-h treatment, Measure the electrical performance of the test article within 5min after its removal, and check the appearance quality for 1-2h under normal conditions	PASS
振ጣ试验	Dynamic frequency range of 10-55 hz, displacement amplitude: 0.35mm, acceleration amplitude: 50.0m/s, sweep cycle times: 30 times	PASS
