Design Specifications	Typical	Units
Antenna form	FPC	
working Frequency	2400-2500	MHz
Gain	≤ 4	DBi
Antenna efficiency	50-65	%
VSWR	≤ 3	
Ploriaztion	Line polarization	
Axial Ratio	/	N/A
Radiation pattern	all-around	
impedance	50 ohm	
Power handling	33	
Interface	Shrapnel contact	
Overall dimensions	See drawing section	
Weight	No requirement	
Operatin Temp	-30 ~ 85	
Storing Temp	-30 ~ 70

VLG Communication has possession of proprietary information provided in this report and this proprietary information shall be kept in strict confidence and not disclosed to any person or firm without the prior written consent of VLG Communication Technology.

1、 **Specifications:** The report mainly provides the test status of the electrical performance parameters of the WIFI antenna. WIFI antennas are in the 2400~2500MHz band.

2、 Electrical Specification

2.1 specification standard

The working frequency band of WIFI antenna is in 2400~2500MHz frequency band. The following table is the passive performance test index of the antenna

2.2 Antenna matching circuit:

No tuning match was added

2.3 ANT VSWR

2.3.1 Test setup

□ VSWR The test device is successively connected as: 8714ET: **network analyzer**→50 Ω coaxial

Cable→→**Test Fixture**

Treatment of test fixture: a cable is used to lead out the SMA connector at the 50 ohm test point of the antenna, which is connected with the copper tube with a choke, and then connected to other devices in turn.

3、Recommendations and conclusions

This report is based on the electrical performance of the final version of the R1878A2SE WIFI antenna supplied by the customer. As can be seen from the above test data, this antenna provides better electrical performance. VLG R & D staff look forward to your confirmation, thank you for your cooperation!
