Subject: Request for host-specific C2PC to a modular approval

Module FCC ID: 2BE68-RAV001

Module certification date: June 13, 2024

We would like to request a Class II permissive Change for a module to include a specific reference trace on a specific host device. Under this C2PC and modular approval, the module would be limited to installation only in one particular host device. The microstrip trace between the module and the antenna connector and the antenna will therefore be part of the host device, which was tested in this C2PC application.

The module and host device are manufactured by the same company and they will maintain complete control over module integration. All radiated spurious emissions tested was repeated to account for the new antenna and microstrip trace to the antenna. Conducted measurements will be taken from the original module certification as they are not expected to change because the module has not been modified.

Thank you,
