

Model difference

The equipment under test (EUT) is a 2.4GHz transceiver with 128 channels operating at 2402 - 2480 MHz. It is powered by a 51.2VDC battery for Lawnmower and a 3.6V 2550mAh 18650 battery for Remote Control. It uses a private frequency hopping protocol.

Lawnmower and Remote control use the same radio module but different antennas.

There are two models for Lawnmower: Model ZMLMS212WG1 and ZMLMS214WG1 with two type battery pack, the difference lies on the Travel motors quantity, others are the same.

Model	Battery pack	Travel motors quantity
ZMLMS212WG1	2WD/4WD	2
ZMLMS214WG1	2WD/4WD	4

Sincerely,
