TOBY
Part of the Cotecna Group

Shenzhen Toby Technology Co., Ltd.

Maximum Permissible Exposure Evaluation
FCC ID:*2BFBZ-1-5A*

1. Client Information

Applicant	:	Shenzhen Shus Smart Home Co.,Ltd.
Address	:	No.8, Tangfu Road,Pingshan District,Shenzhen City, Guangdong Province
Manufacturer	:	Shenzhen Shus Smart Home Co.,Ltd.
Address	:	No.8, Tangfu Road,Pingshan District,Shenzhen City, Guangdong Province

2. General Description of EUT

EUT Name	:	Remote control	
Model(s) No.	:	1-5	
Model Difference	:	-----	
Product Description	:	Operation Frequency:	433.92 MHz
		Antenna Gain:	-1.1dBi PCB Antenna
Power Supply	:	DC 3.0V by button cell	
Software Version	:	1.0	
Hardware Version	:	1.0	

Remark: The antenna gain provided by the applicant, the adapter and verified for the RF conduction test and adapter provided by TOBY test lab.

Note: More test information about the EUT please refer the RF Test Report.

TB-RF-075-1.0

The RF Exposure Evaluation for FCC:

SAR Test Exclusion Calculations

FCC: According to 447498 D04 Interim General RF Exposure Guidance v01.

The SAR-based exemption formula of § 1.1307(b)(3)(i)(B), repeated here as Formula (B.2), applies for single fixed, mobile, and portable RF sources with available maximum time-averaged power or effective radiated power (ERP), whichever is greater, of less than or equal to the threshold P_{th} (mW).

This method shall only be used at separation distances from 0.5 cm to 40 cm and at frequencies from 0.3 GHz to 6 GHz (inclusive). P_{th} is given by Formula (B.2).

$$P_{th} \ (mW) = \begin{cases} ERP_{20\ cm}(d/20\ cm)^x & d \leq 20\ cm \\ ERP_{20\ cm} & 20\ cm < d \leq 40\ cm \end{cases}$$

where

$$x = -\log_{10}\left(\frac{60}{ERP_{20\ cm}\sqrt{f}}\right)$$

and f is in GHz, d is the separation distance (cm), and ERP_{20cm} is per Formula (B.1). The example values shown in Table B.2 are for illustration only.

Table B.2—Example Power Thresholds (mW)

Frequency (MHz)	Distance (mm)									
	5	10	15	20	25	30	35	40	45	50
300	39	65	88	110	129	148	166	184	201	217
450	22	44	67	89	112	135	158	180	203	226
835	9	25	44	66	90	116	145	175	207	240
1900	3	12	26	44	66	92	122	157	195	236
2450	3	10	22	38	59	83	111	143	179	219
3600	2	8	18	32	49	71	96	125	158	195
5800	1	6	14	25	40	58	80	106	136	169

Calculations

1. Antenna Gain:

PCB Antenna: 0dBi.

2. EUT Operation Condition:

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

3. Exposure Evaluation:

Equation from page 18 of OET Bulletin 65, Edition 97-01

$S=(PG)/4\pi R^2$

Where

S: power density
P: power input to the antenna
G: power gain of the antenna in the direction of interest relative to an isotropic radiator.
R: distance to the center of radiation of the antenna

4. Test Result:

$E = EIRP - 20\log D + 104.8$

where:

E = electric field strength in dBμV/m,

$EIRP$ = equivalent isotropic radiated power in dBm

D = specified measurement distance in meters.

$EIRP=E-104.8+20\log D=64.54-104.8+20\log3 = -30.72\text{dBm}$

Frequency (MHz)	Measured Power (dBm)	Tune up Tolerance ± (dB)	Output power (Max. Turn-up Procedure) (mW)	Limit (mW)
433.92	-30.72	-30±1	0.001	22

Note: At separation distance of ≤5 mm

5. Conclusion:

The measurement results comply with the FCC Limit per 47 CFR 2.1093 for the uncontrolled RF Exposure of mobile device.
