

Advertising machine instructions

1. Product Overview

LCD advertising machine uses LCD display to play video ads, which is especially suitable for high-end brands' comprehensive multimedia technology to deliver all-round product information, promotion information, etc. to consumers. Improve the appearance rate and display effect of products at the sales terminal. It is placed next to the products in the store and can be automatically opened for publicity. Compared with other traditional media and promotion methods, the investment is extremely low and cost-effective.

This LCD advertising machine driver decoder integrated board can directly drive the 1920 * 1080 resolution LVDS screen and below. It contains powerful audio and video processing functions and can output high-quality pictures and sound quality.

Three USB2.0 interfaces, supporting high-definition video and picture playback. Support mutual copy function between USB, which can facilitate users to update files.

WARNING: Running this device in a residential environment may cause radio interference.

FAQ:

1. Q: There is a screen when connecting the board and screen

Answer: Enter the factory menu to adjust TI MODE and 6 bits and 8 bits. If it is still abnormal, please check whether the screen cable is correct (whether the LVDS selector pin of the screen selects the normal LVDS mode).

2. Question: If the power supply is 12V, 5V and 5VSTB, can it be connected

Answer: Yes, but it is necessary to determine whether there is a 12V to 5V coil welded on the board. If there is one, please remove the coil. If there is one, just connect the 12V power supply.

3. Q: Can the board directly click the 120HZ HD screen

A: No, you need to add a 60 to 120HZ adapter board (the definition of other companies may be different, if abnormal, our company also has this adapter board, equipped with screen cable)

4. Question: Sometimes the target disk cannot be cleared when the copy is formatted

A: Before using the USB flash disk and CF card, please format them into FAT32 format.

5. Q: Sometimes after upgrading the USB flash disk, it won't automatically boot up

A: Before upgrading, you'd better format the USB flash drive (FAT32), and then upgrade it. It is recommended that customers upgrade to use a better USB flash drive (some

FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Radiation Exposure Statement

This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure
