Type-C: DC 5V/3A, 9V/3A, 12V/3A, 15V/3A, 20V/2.25A

USB-A1:DC 5V/3A, 9V/2A, 12 V/1.5 A

USB-A2:5V/2.4A

Max Power: 2500W

# Insert a microSD Card

TBCR offers options for recording your videos. You can choose to subscribe and pay for cloud storage to save video clips for 30 days, providing additional backup and enhanced features.

Alternatively, you can continuously save footage on a micro SD card\* and play it back using your app. When the micro SD card is full, the camera will automatically overwrite the oldest files.

## Follow the steps below to insert a micro SD card into your TBCR Spot:

1. Locate the SD card slot.
2. Hold the card in the correct orientation and carefully insert it into the slot. Push the SD card in until you hear a clicking sound.

## Cameras Without Hot-Swap Capabilities

WiFi Cameras do not support hot-swapping of memory cards. You must insert the memory card before powering on the device. (If you have already paired and connected the device, and then inserted the memory card, you should perform a restart through the app.)

1. Memory cards cannot be inserted or removed while the camera is powered on. This is known as "hot-swapping" and is not supported.
2. You must insert the memory card first, before turning on the camera. This ensures the camera can properly detect and initialize the memory card.
3. If you have already paired and connected the device, and then inserted the memory card, you should perform a restart of the app or device to ensure the memory card is properly recognized.

# Set Up Your Camera

Follow these steps below to begin using your new camera

## Step 1. Download : Smart Life

Get the Smart Life app from the App Store or Google Play, or scan the QR code below to download it.

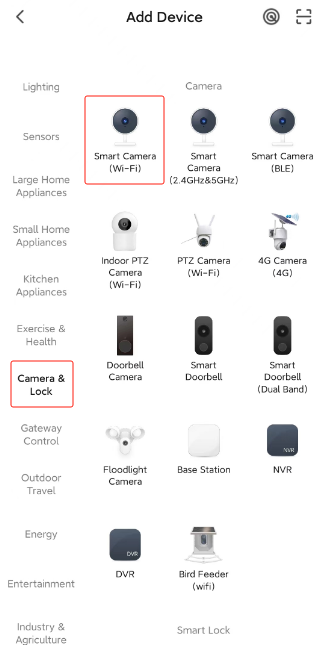

OR

## Step 2.Start Setup

Tap the button in the Smart Life app, then select "Add Device">"Camera & Lock">"Smart Camera (Wi-Fi)"

### Step 3. Configure Camera

1. Confirm that your current Wi-Fi network is using a 2.4GHz frequency.
2. Enter the correct Wi-Fi password.
3. After clicking "Next", a QR code will appear. Hold the QR code 4 inches away from the camera lens.
4. When you hear the device emit a "drip drip drip" sound, on your phone select "I Heard a Prompt". The system will automatically scan for the camera product and connect the device.
5. **Tip: Many connection issues arise from incorrectly entering the Wi-Fi password at this step.**

6. Once the connection is successful, your camera is ready for use.

## Enter Wi-Fi Password

Please scan the QR code from 15 to 20 cm away

I Heard a Prompt

No Prompts

## Note:

- ① When you first power on the product, it will emit a beep sound indicating the need to connect to a Wi-Fi network. Ensure you are in a Wi-Fi environment. If the camera continues to beep, it suggests an unsuccessful connection. Once successfully connected, the beeping will stop. If you update your Wi-Fi password during use, you'll need to reconnect. Insert a reset pin into the reset hole and hold it for 4-5 seconds. When you hear a beep sound from the device, you can resume network pairing.
- ② To simplify usage and enable full camera functionality, allow the app to request access permissions. Granting these permissions ensures the privacy and security of your personal information.
- ③ Reset: Insert the equipped card pin into the reset hole for 5 seconds, When you hear a confirmation sound, the device has been reset and can be reconnected.
- ④ If your current Wi-Fi network is using a 5G signal, it needs to be replaced with a 2.4GHz Wi-Fi network for configuration and linking.

## Frequently Asked Questions

Q: How can I check if the camera is offline unexpectedly?

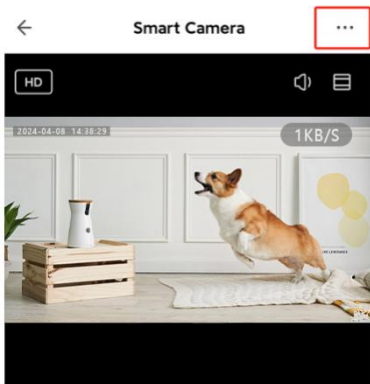

- A: 1. Verify if the power supply and network connections are normal.
2. Restart the device.
3. Reconfigure the camera.
4. Ensure that the network bandwidth at home is adequate.

## 1. Toggle HDR on with one click.

## 2. Toggle HDR off with another click.

# FCC Warning Statement

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

## RF Exposure Statement

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum distance of 20cm the radiator your body. This device and its antenna(s) must not be co-located or operation in conjunction with any other antenna or transmitter.
