1. List of accessories

- | | |
|---------------------------|----------------------------|
| 1. 1 x USB cable | 5. 1 x User manual |
| 2. 1 x Bracket & 3 Screws | 6. 1 x Solar Panel |
| 3. 1 x mounting strap | 7. 1 x Solar support panel |
| 4. 1 x Hunting camera | 8. 1 x Bracket |

2. How the hunting camera works

The hunting camera is equipped with a low-power PIR sensor, which senses the infrared signal of animals or human bodies through the pyroinfrared sensor, automatically triggers the camera to take pictures and save videos in the local machine, and upload them to the app through the server.

When the animal enters the monitoring range of the hunting camera, the hunting camera starts the camera through the infrared sensor to complete the shooting, save and upload the shooting file. When the animal is out of range of the hunting camera, the camera is in a dormant standby state. When the animal again enters the camera's monitoring range, the camera is turned on again.

3.Appearance diagram and Indicator introduction

- | | | | |
|-------------------------|-----------------------------|------------------------|------------------------|
| 01. Antenna | 02. PIR | 03. Speaker | 04. Microphone |

FCC Statement

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: 1) this device may not cause harmful interference, and 2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult the dealer or an experienced radio/TV technician for help.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Radiation Exposure Statement

This device complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

This device must operate with a minimum distance of 20 cm between the radiator and user body.
