● RECORD

Press the  button to enter the menu, Press the  button to select **RECORD**, and press the  button to confirm.

REWRITE : Loop Recording

FORMAT : Format memory card

Record Time : The time length of the video clip

MENU FAQ

Q1: Why is the signal very weak? Image delay?

A1: Make sure the antenna of the camera and the monitor is firmly installed, and the antenna does not touch the metal because the metal blocks the signal. You can also try to replace the camera or monitor antenna with extended antenna to expand the signal transmission distance.

Q2: Does the monitor support to add a second camera?

A2: YES! The monitor supports up to 4 cameras, please

Tips

1. It is recommended that the backup camera be charged for **5-6 hours** for the first time.
2. The antenna can't touch any metal, or it will greatly affect the video signal transmission.

3. The camera cannot fully rely on solar charging, and solar energy can only extend the working time of the camera. It is necessary to charge with a charger regularly. Please do not use the data cable and charger with the fast charge protocol to charge it.

Customer Service

If you need technical guidance or difficulty in using the camera, please contact our after-sales customer service at any time. Our customers will answer all your questions within 12 hours. When you contact our after-sales customer service, please attach your #order number or your product model so that we can quickly reply to your question.

Warranty

All products provide a 1-year free warranty service. Unless human damage.

FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum 20cm distance between the radiator and your body: Use only the supplied antenna.
