2. Power on and log in to the system

Click on the [Visual Dispatch] icon to enter the pre-recording interface for law enforcement, as shown in the figure below.

3. The basic concepts and button function definitions of [Visual Dispatch] are described as follows:

01. Press and hold to trigger an alert.

02. Press the record button to start video recording; press and hold to turn on/off the laser light.

03. Press the Fn button to mark footage.

04. Press the audio recording button to activate the audio recording.

05. Press and hold the warning light button to activate the warning light flashing; press and hold again to turn it off. Press to turn the flashlight on/off.

06. PTT (Push-to-Talk) Button: Press and hold to speak, and release to send the voice and receive audio from other devices. This feature requires the command center to enable permissions for real-time Push-to-Talk functionality.

07. Camera Button: Press to take a photo.

08. Power Button: In the powered-off state, press and hold for 2 seconds to turn on the device. In the powered-on state, press to prompt shutdown or restart, press and hold for 8 seconds to force a restart.

FCC Statement

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: 1) this device may not cause harmful interference, and 2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

RF Exposure Statement

SAR tests are conducted using standard operating positions according standards with the device transmitting at its highest certified power level in all tested frequency bands, although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value.

This model product has been tested and meets the RF exposure guidelines with the test distance 0mm for body worn. The highest SAR_{1g} value is 0.605 W/Kg. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with RF exposure requirements, and should be avoided
