ATTN.: Reviewing Engineer

FCC ID: 2BLES-GM0943

Models: GLOBYMGNG3 Full version and Basic version

We hereby request Family Certification for the above-mentioned Models based on them being electrically, and physically identical apart from model name/number.

GLOBYMGNG3 has been designed in order to be assembled during the manufacturing process with or without some "optional" circuitry, not related to metrological and/or legally relevant features and not related to communication module part.

The following pictures, show a view of GLOBYMGNG3 in "full configuration" (all optional circuitry mounted) and in "basic configuration" (all optional circuitry not mounted):

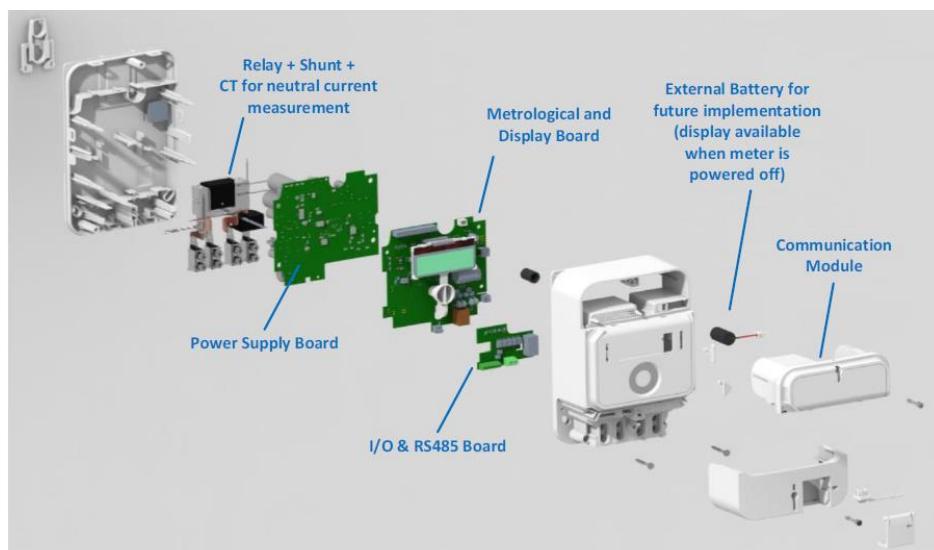

Figure 1 - GLOBYMGNG3 Full Version exploited view

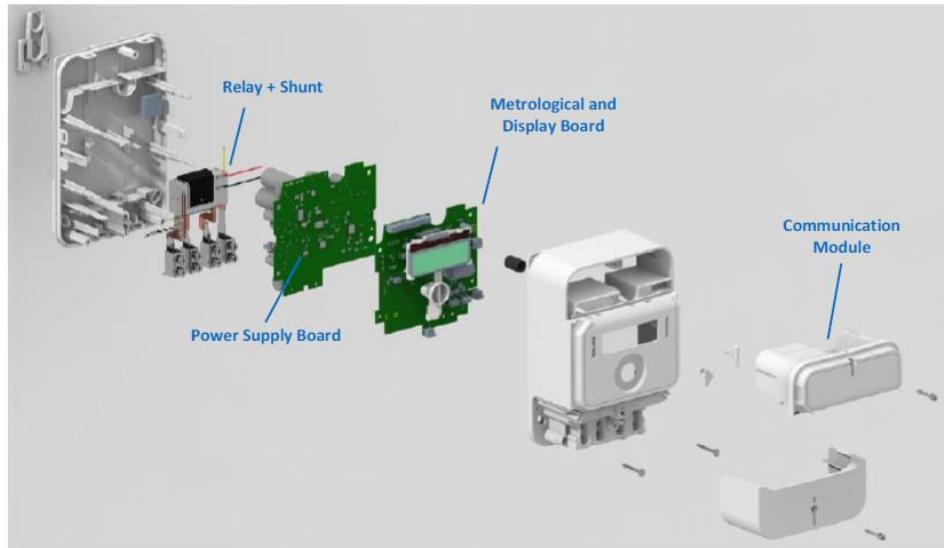

Figure 2 - GLOBYMGNG3 Basel Version exploited view

It is possible to apply the same "model" to both meter configurations since the optional circuits are mounted only on the electronic boards of host meter and do not affect the communication compartment in any way.

There is a QR code on the GLOBYMGNG3 product label (meter cover). The type of meter configuration is stored inside the QR code in the "Device ID" information (8 bytes). These 8 bytes allow to the operator to understand internal configuration of the meter by scanning the QR code.

The meter manufacturing process is supervised and certified by the European Measuring Instruments Directive.
