

**b. When equipped with a docking station, the default connection is to connect to the I/O on the docking station, and the option to connect to the I/O on the main screen is not recommended.**

- Flip the main device over 90 degrees, insert the connecting wires of each external device into the docking station correctly, and ensure that the connections are correct and stable;
- If you need to connect the I/O on the main screen, you can refer to the connection method without docking station.

**Attention: Power connection (as shown in Figure 7 on the right)**

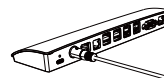

- \* When the main device is equipped with an docking station, the power adapter is connected to the DC in on the docking station by default;
- \* When the main device does not have an docking station, the power adapter is connected to the DC in on the main screen by default;
- \* Please make sure to connect the AC power cord on the adapter to a grounded power source (such as a socket);

(Without docking station power connection)

**⑦ Power on verification:**

After rechecking the above operations to ensure that the assembly is intact, press the power button to start the machine normally;  
After verifying that the startup is normal, the device installation is now complete.

(With docking station power connection)

**[ Figure 8 ]**

## 6. Common troubleshooting methods

Common fault phenomena and judgment solutions of equipment are for reference only;

The listed problem points do not include all problem points, and the specific solutions shall be subject to the actual situation.
