Test setup

Emissions in frequency bands (below 1GHz)
 A photograph of an antenna test setup in a Faraday cage. The antenna is mounted on a vertical pole and is connected to a red and blue feed horn. The test setup is positioned on a yellow floor with a grey metal frame. The background shows the interior of a test chamber with white panels and a 'DAC' logo on the wall.
Emissions in frequency bands (above 1GHz)
 A photograph of an antenna test setup in a Faraday cage for high frequency emissions. The antenna is mounted on a vertical pole and is connected to a blue and yellow feed horn. The test setup is positioned on a yellow floor with a grey metal frame. The background shows the interior of a test chamber with white panels and a 'DAC' logo on the wall. The floor has a different texture and color compared to the low frequency setup.

Conducted Emission at AC power line
