

## Declaration on Wireless Communication Module

We hereby declare that the provided [ASTROLAB 88/AP6275P] This module supports WIFI 5G full frequency band function, including B1, B2A, B2C, B3. The product applied for this time only supports WIFI 5G B1, and consumers cannot unlock or replace software versions to enable other 5G frequency band functions on their own. Except for BT/WIFI2.4G/5G Band 1 frequency band. All other wireless frequency bands and unauthorized functions have been permanently blocked and cannot be turned on by any user operation.

How can we ensure that consumers cannot access other features?

1. Physical protection

Shielding cover welded: Cover the RF area and physically isolate the debugging interface.

2. Software protection

Hide Settings Menu: Remove options such as "Network Frequency Band Selection" from the system.

Log blocking: Do not output debugging information related to frequency band switching.

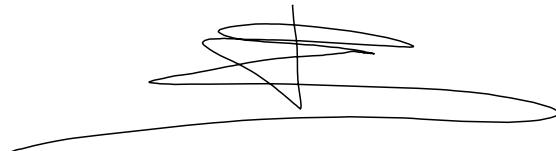

3. Firmware update control

Disable OTA updates: Prohibit users from independently updating firmware.
