### 2.4 MPE Calculation Method

The MPE was calculated at 20 cm to show compliance with the power density limit. The following formula was used to calculate the Power Density:

**Report No. : FA531015** 

$$E (V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density:  $Pd (W/m^2) = \frac{E^2}{377}$ 

E = Electric field (V/m)

**P** = RF output power (W)

**G** = EUT Antenna numeric gain (numeric)

**d** = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$
