WIRELESS CAR ADAPTER 2IN1 CARPLAY&ANDROID AUTO

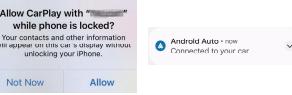

User Manual

Note on the manual
Thank you for purchasing this product. Please read the manual carefully so that you will know how to operate your model properly. After finished reading the instructions, keep this manual in a safe place for future reference.

Made in China

I HOW TO CHECK A CAR HAS CARPLAY AND ANDROID AUTO OR NOT

1. Plug an iPhone (running iOS 10 or newer) OR Android phone (running android 11 or newer) into the car USB ports with genuine factory cable. If there is a notification pop up on your phone like below, that your car has built-in Apple CarPlay OR Android auto.

2. If there is a Carplay OR Android auto icon in the stereo menu, that your car has built-in Apple CarPlay OR android auto.

3. Contact your car dealer for help.

I CONNECTION STEPS

1. Connect the box to the original car USB Data interface. Press the APP button or Enter to the Carplay page; Read box data and wait for a connection;

2. Turn on the Bluetooth of the phone, search for the Bluetooth Device naming "ABox-BT_****", Pair it and allow the Sync, finally click "Use Carplay"

NOTE: If you have connected to the original car Bluetooth or other Bluetooth devices, please disconnect them before connecting to the dongle.

3. After the connection, please wait for a few seconds and CarPlay interface will be shown;

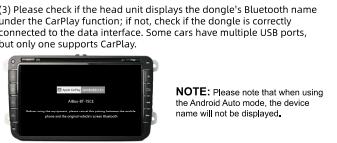

Wireless Android Auto connection process as above

I Troubleshoot the connection issue:

1. **Connection between the head unit and the dongle:**
(1) Check if the head unit supports wired CarPlay by using the original MFI-certified data cable to connect the iPhone. Check if this function is available; if not, the wireless CarPlay dongle cannot be used. You can refer to the previous section on "How to check a car has CarPlay or not." Ensure that both your car's infotainment system has the latest software updates installed. Start by checking if there are any available updates for your car's infotainment system. Manufacturers often release software updates that address bugs and improve compatibility with newer devices. Visit the manufacturer's website or consult your car's manual for instructions on updating the software.
(2) After connect to the car interface, check if the product indicator light is on or not, ensure that the product is correctly connected to the car's data interface.

3. Please check if the head unit displays the dongle's Bluetooth name under the Carplay function. If not, check if the dongle is correctly connected to the data interface. Some cars have multiple USB ports, but only one supports CarPlay.

NOTE: Please note that when using the Android Auto mode, the device name will not be displayed.

- 3 -

2. **Connection Between the iPhone and the Dongle:**
(1) Ensure that your iPhone is a newer model and running the latest operating system. Using an older iPhone model may lead to compatibility issues with your car's infotainment system.
If you find that CarPlay won't connect, it could be due to using an incompatible device model. CarPlay is designed to work seamlessly with certain iPhone models, but as technology advances, some older devices may not be able to keep up.
(2) Make sure that both Bluetooth and Wi-Fi are enabled on your phone, and ensure that neither Bluetooth nor Wi-Fi is being used by other devices.

(3) Before connecting your iPhone to the dongle, ignore the original car's Bluetooth device or any other Bluetooth devices. Otherwise, it may affect the connection between the dongle and your phone.

If you encounter any issues during use, please first refer to the Q&A, or contact our after-sales technical team.

I QUESTIONS & ANSWERS

Q1: There is no sound out while making a phone call.

A: You can check whether your iPhone has pressed twice the Bluetooth device "ABox-BT_****" in "Connected" status in the settings. If yes, then you cannot hear any sound when making a call. After CarPlay entering to the driving mode, all the Bluetooth devices including ABox-BT_**** should be connected on your phone should show "not connected", as attached image.

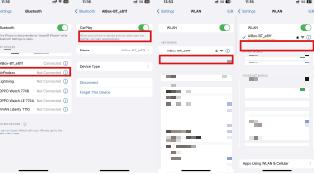

You can try to forget all the Bluetooth devices in your Phone's Bluetooth setting, and pair the "ABox-BT_****" again.

I QUESTIONS & ANSWERS

Q3: Usually I wear an Apple watch, will it influence using?

A: Technically it doesn't interference the wireless CarPlay using, since it has been tested with watch SE & iPhone XR in iOS 15.4 software version, and the wireless carplay works as normal. If it has some issues in connection, please follow the instruction below to setup the iPhone settings steps by steps:

1. Forget the "ABox-BT_****" Bluetooth & Network Device, and pair again the "ABox-BT_****" Bluetooth device in the settings;
2. Enter to the info of the "ABox-BT_****" Bluetooth device, and make sure that the CarPlay function is on;

I QUESTIONS & ANSWERS

Q4: Usual I wear an Apple watch, will it influence using?

A: After entering to the iPhone W-Fi settings, find the "ABox-BT_****" network device and join it, the password is "88888888".

4. After pressing the network device, wait for 10-30 seconds, and it will enter to CarPlay/Driving mode automatically.

If it still doesn't work after the settings, pls slide to power off your phone and restart it again.

Sometimes the CarPlay connection will change your iPhone's preference, and the iPhone won't enter to wireless carplay function automatically. Each time restarting your Phone & AutoBox can optimize the CarPlay connection.

Q5: Usable to automatically reconnect?

A: In some cars, we need to select "automatic connection" in the CarPlay settings, so that the automatic connection function of the dongle can be used.

Other cases:

1. Please make sure that the Bluetooth and WiFi functions of your mobile phone are turned on and the Bluetooth is not occupied when you get in the car;
2. Clear the pairing record, restart the phone and re-pair the dongle.

Q6: Can the adapter be paired with multiple phones?

A: The dongle can be paired with multiple iPhones, but only one device can be connected at a time. Please note, by Bluetooth function default, the dongle's system will only autoconnect back to the last used iPhone.

I FCC STATEMENT

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Notices: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reseat or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
