Explanation of model differences in remote control

The remote controls covering models 2H15125, 2H15102, and 2H15106 belong to the same series as the main inspection model 2H151XX. Their main differences is the icon on the remote surfaces, the appearance color of the remote controls. Except for the differences, the circuit boards, electrical principles, key components and materials used are exactly the same.
