

## TEST REPORT

**Report Reference No.....:** MTEB25060207-H

**FCC ID.....:** 2BQGV-HTFIRE01

Compiled by

( position+printed name+signature)..: File administrators Alisa Luo

Supervised by

( position+printed name+signature)..: Test Engineer Sunny Deng

Approved by

( position+printed name+signature)..: Manager Yvette Zhou

**Date of issue.....:** Jun.18,2025

**Representative Laboratory Name.:** Shenzhen Most Technology Service Co., Ltd.

**Address.....:** No.5, 2nd Langshan Road, North District, Hi-tech Industrial Park,  
Nanshan, Shenzhen, Guangdong, China.

**Applicant's name.....:** Prosperitas, LLC

**Address.....:** 6700 Jefferson Hwy, Building 6 Baton Rouge, LA 70806, U.S.

**Test specification/ Standard.....:** 47 CFR Part 1.1307

47 CFR Part 2.1093

**TRF Originator.....:** Shenzhen Most Technology Service Co., Ltd.

**Shenzhen Most Technology Service Co., Ltd. All rights reserved.**

**Test item description.....:** Heartfire Ornament

**Trade Mark.....:** The Lost Heartfire

**Model/Type reference.....:** HTFIRE01

**Listed Models .....** N/A

**Modulation Type.....:** ASK

**Operation Frequency.....:** 433.92MHz

**Hardware version.....:** ZX969-RF21C-IR-FCC-V1.0

**Software version .....** ZX969-RF21C-433-001-V1.0

**Rating.....:** DC 3V by Battery

**Result.....:** PASS

**TEST REPORT**

Equipment under Test : Heartfire Ornament

Model /Type : HTFIRE01

Listed Models : N/A

Remark : N/A

Applicant : Prosperitas, LLC

Address : 6700 Jefferson Hwy, Building 6 Baton Rouge, LA 70806, U.S.

Manufacturer : Hangzhou Euro Lucky Trading Co., Ltd.

Address : Room 610-614, Ningbo Building, No.46 Tianmushan Road,  
Hangzhou, China.310007

<b>Test Result:</b>	<b>PASS</b>
---------------------	-------------

The test report merely corresponds to the test sample.

It is not permitted to copy extracts of these test result without the written permission of the test laboratory.

## 2.1 RF Exposure Compliance Requirement

### 2.1.1 Standard Requirement

According to KDB447498D01 General RF Exposure Guidance v06

#### 4.3.1. Standalone SAR test exclusion considerations

Unless specifically required by the published RF exposure KDB procedures, standalone 1-g head or body and 10-g extremity SAR evaluation for general population exposure conditions, by measurement or numerical simulation, is not required when the corresponding SAR Exclusion Threshold condition, listed below, is satisfied.

### 2.1.2 Limits

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:

$$\left[ \frac{\text{max. power of channel, including tune-up tolerance, mW}}{\text{min. test separation distance, mm}} \right] \cdot$$

$$\left[ \sqrt{f(\text{GHz})} \right] \leq 3.0 \text{ for 1-g SAR and } \leq 7.5 \text{ for 10-g extremity SAR, where}$$

$f(\text{GHz})$  is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation<sup>17</sup>

The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is  $\leq 50$  mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is  $< 5$  mm, a distance of 5 mm is applied to determine SAR test exclusion

## 2.1.3 EUT RF Exposure

$$\text{EIRP} = \text{PT} * \text{GT} = (\text{E} \times \text{D})^2 / 30$$

where:

PT = transmitter output power in watts,

GT = numeric gain of the transmitting antenna (unitless),

E = electric field strength in V/m,  $10^{(\text{dB}\mu\text{V/m})/20} / 10^6$ ,

D = measurement distance in meters (m)---3m,

So  $\text{PT} = (\text{E} \times \text{D})^2 / 30 / \text{GT}$

The worst case (refer to report MTEB25060207-R) is below:

Antenna polarization: Horizontal		
Frequency (MHz)	Level (dBuV/m)	Polarization
433.92	81.28	Peak
433.92	74.63	Average

Antenna polarization: Vertical		
Frequency (MHz)	Level (dBuV/m)	Polarization
433.92	81.59	Peak
433.92	74.94	Average

For 433.92MHz wireless:

Field strength=81.59dBuV/m

Ant gain 0dBi;so Ant numeric gain=1

$$\text{EIRP} = \text{PT} * \text{GT} = (\text{E} \times \text{D})^2 / 30 = (10^{(\text{dB}\mu\text{V/m})/20} / 10^6 * 3)^2 / 30 = 0.00004$$

$$\text{So PT} = \text{EIRP} / \text{GT} = 0.00004 \text{W} / 1 = 0.04 \text{mW}$$

$$\text{So } (0.04 \text{mW} / 5 \text{mm}) * \sqrt{0.43392 \text{GHz}} = 0.00528$$

$$\text{exclusion} = 0.00528 < 3.0 \text{ for 1-g SAR}$$

So the SAR report is not required.
