

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

EUT Housing and Board View 1	 A photograph showing the internal components of an Electronic Under Test (EUT) housing. The green printed circuit board (PCB) is populated with various electronic components, including integrated circuits, capacitors, and resistors. The housing is black and has a circular opening. A silver metal component, likely a heat sink or a shield, is placed next to the housing. A black ruler with white markings is positioned below the components for scale.
Solder Board-Component View 1	 A close-up photograph of a small electronic component, possibly a microcontroller or a sensor, soldered onto a green PCB. The component is marked with the number '220'. A black ruler with white markings is positioned below the component for scale.

Solder Board-Component View 2	 A photograph of a small green printed circuit board (PCB) component, likely a USB connector, positioned on a blue textured surface. The component is oriented vertically and is surrounded by a black L-shaped ruler with white millimeter markings. The ruler indicates the component's size, which is approximately 25 mm wide and 15 mm high. The component features two circular solder pads and a central USB connector.
Solder Board-Component View 3	 A photograph of the same green PCB component from a different perspective, showing its underside. The component is placed on a blue textured surface next to a black L-shaped ruler with white millimeter markings. The ruler shows the component is approximately 25 mm wide and 15 mm high. The underside of the component reveals various electronic components, including a USB connector, several integrated circuits, and various passive components like resistors and capacitors. The component is secured with white solder.

Solder Board-Component View 4	 A photograph of a small, irregularly shaped green printed circuit board (PCB) component. The component has various electronic components soldered onto it, including a central integrated circuit (IC) and several smaller surface-mount components. It is placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters (0 to 100 mm) and centimeters (0 to 10 cm).
Solder Board-Component View 5	 A photograph of a circular component, likely a coil or inductor, with a copper-colored wire wound around a central core. The component is mounted on a green PCB. It is placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters (0 to 100 mm) and centimeters (0 to 10 cm).

Solder Board-Component View 8	 A photograph showing a green circular printed circuit board (PCB) and a toroidal inductor. The PCB has several small components and a central circular pad. The toroidal inductor is made of copper wire wound around a core. Both components are placed on a blue textured surface next to a black ruler with white markings in millimeters. The ruler is oriented vertically and horizontally, providing a scale for the components.
Solder Board-Component View 9	 A photograph showing a small, circular component, likely a toroidal inductor, placed on a blue textured surface. The component has a dark, possibly black, outer ring and a lighter, possibly copper, inner core. It is positioned next to a black ruler with white markings in millimeters, which is oriented vertically and horizontally to provide a scale.
