Circuit Description

The EUT was used the PC to control the Bluetooth module to control the GPRS module
When the comments was used to PC by the software, we known that the product
have the RF transmitter modules for Bluetooth, GPRS Radio modem for Licensed
Non-Broadcast Station. The module for Bluetooth seeks the other device or keep the connection
with at any time. The module for GSRS Radio modem will operate exclusively because
this module are used for the same purpose. The GSRS module receives the reference data from
RTK network on the Rover mode of the product. The GPRS Radio modem transmits RTK
corrections on the Base mode of the product and receives it on the Rover mode. The operation
mode (Base or Rover) of this product is selected by the software exclusively. In Rover mode
is selected by the software exclusively. Therefore the modules for GPRS and BT Radio modem
do not operate at the same time.
