Washington, D.C. 20554

With reference to our appointed laboratory --- Intertek Testing Services, we have been informed that the FCC 15 application for the model TC-920L/TC-1475 is on hold owing to question on the manufacturability of the modifications. We would like to explain that this model is an enhanced version of a previous model and the ordered quantity from our customer is small. Although the modification is difficult for production, we will still implement it in our production with lower production rate and higher production cost. It is not justified to spend more time or cost to find production-friendly solution for small production quantity. In addition, our production is confident to handle such difficult modifications.

Lastly, we will highly appreciate if the FCC 15 Certificate is granted as soon as possible.

Thank you for your concern.
