Hello Marianne,

Thank you for your mail.

The reason why we did not conduct the test of AC Line conduction for the Data Communications (USB) is as follows.

The EUT cannot be connected with AC adapter (desktop charger) and USB at the same time.

Also, when the EUT is connected with this USB, no power is supplied from PC to EUT at all.

Please forward this to Greg.

Thank you again.  
Have a nice weekend!

Best Regards,

Izumi Mitsui
