Request for Class II Permissive Change

March 27, 2013  
AVG-13-U019

Federal Communication Commission  
Equipment Authorization Division  
Application Processing Branch  
7435 Oakland Mills Road  
Columbia, Maryland 21046

Subject: Request Class II Permissive Change  
Type Product: Wireless LAN Module, Model DWM-W092  
FCC ID: ACJ-HXWA30M  
Original Grant Date: October 26, 2012  
Applicant & Grantee: Panasonic Corporation of North America

To Whom It May Concern:

This is to request a Class II Permissive Change for FCC ID: ACJ-HXWA30M, which was originally granted on October 26, 2012.

We originally received single modular approval, without SAR testing, because the declared RF output power meet the exclusion limits as stated in FCC Part 2 §2.1093 and FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65. However KDB 447498 D01 General RF Exposure Guideline v04 dated Nov 13, 2009 was revised with v05 dated Oct 24, 2012. Under the revised guidelines, the past declared RF output power does not meet the SAR exclusion limits. As such, we performed the SAR test evaluation with host device<sup>1</sup> and confirmed that this product still meets the minimum requirements for RF exposure evaluation. Please refer to the SAR test report submitted with this application.

Thank you for your attention to this matter.

Sincerely,

*Richard Mullen*
