Dear Katie

This is in response to your email message regarding Submit occupied bandwidth plots to show compliance with Section 15.249(c) at the band edges.

Please be advised Part 15.249(c) did not specify what method of measurement we should use.

The test result for spurious emission in our reports are based on measurements employing a CISPR quasi-peak detector, that is why there is no plots, but we have the results in tables. The measurements tables are in page 21 of 25 for the base and page 19 of 23 for handset.

Best regards,
Zameel Shahat
