Re: Class II Permissive Change Application for Panasonic Single Modular under  
FCC ID: ACJ9TGWL15B / Certified Under FCC Parts 15B, 15C and 15E  
for Installation within Panasonic Personal Computer Model FZ-M1

To whom it may concern:

We, Panasonic Corporation of North America performed SAR test to mount the module Model WL15B into the portable Host (Panasonic Tablet PC Model FZ-M1). However, the Radiated emission testing was not additionally performed due to the following:

- The original FCC testing of the module WL15B was performed when the antenna was connected to the module in an open environment. Under this application, the WL15B itself and its antennas installed inside the Tablet PC enclosure. The physical restraints introduced by the Tablet PC enclosure should have resulted in equal or lower level of radiated emission.
- And the original FCC testing of the module WL15B was performed with an antenna of higher gain (2.4GHz: 3.24dBi, 5.15-5.25GHz: 3.64dBi, 5.25-5.35GHz: 3.73dBi, 5.47-5.725GHz: 4.77dBi, 5.725-5.85GHz: 4.97dBi). Both WLAN MAIN antenna (Type: PIFA) and WLAN AUX antenna (Type: PIFA) are the same type as the original ones but have lower gain across level of radiated emission.

In addition, the 802.11n beamforming is not supported because the antennas mounted in the Tablet PC Model FZ-M1 doesn't support the beamforming technology.

Sincerely yours,

Richard Mullen  
Group Manager
